**Drawing for Landscape Architects 2** Sabrina Wilk, 2022-06 In recent years perspective views have swept into the foreground in the field of landscape architecture. They have become the showpiece of any new design project, frequently overshadowing the plan as the principal graphic mediator of ideas. This manual examines the history of these multifaceted images, their power to shape our expectations and thinking and naturally how to create them. Perspectives communicate planned spaces quite unlike any other orthographic architectural projections, easily connecting with human modes of vision and perception. Yet we have become so accustomed to seeing them that we no longer examine their messages. Moving chronologically from the Renaissance to the present day, the book charts their evolution and dissects the motives behind their construction while providing practical advice on how to compose elucidatory and persuasive imagery. Introduction to terminology, Basics and principles, Constructing a perspective, Transmitting the message, Landscape as a medium for ideas. Enduring themes such as beauty and the sublime, The future potential of perspective views. *Drawing for Landscape Architects* Sabrina Wilk, 2014 Few other professions can match landscape architecture's requirement graphically to represent and communicate so much content and so many ideas. From large scale master plans and strategic visions, design concepts and outdoor experiences to specific vegetation and precise construction details, at some point everything has to be explained on paper. This handbook focuses on two areas which even in the age of digital media are still staples of the profession: orthographic projections and blackline drawings. Intended to be both instructional and inspirational, this book covers the basics of landscape architectural representation: hand drawing and sketching in an easy to understand way, encouraging readers to draw their ideas and develop their own graphic language and style. Showcased in these pages are many drawings from international landscape architecture offices offering practical guidance and numerous examples in key thematic areas: Basics of orthographic and parallel projections, Introduction to drawing tools, applications and effects, Symbols in different scales, styles and abstraction levels, Drawing perspectives, constructed and free hand, Basic principles for layout and lettering.
