Agoston, 2005-09-05 Possibly the most comprehensive overview of computer graphics as seen in the context of geometric modelling this two volume work covers implementation and theory in a thorough and systematic fashion Computer Graphics and Geometric Modelling Mathematics contains the mathematical background needed for the geometric modeling topics in computer graphics covered in the first volume This volume begins with material from linear algebra and a discussion of the transformations in affine projective geometry followed by topics from advanced calculus chapters on general topology combinatorial topology algebraic topology differential topology differential geometry and finally algebraic geometry Two important goals throughout were to explain the material thoroughly and to make it self contained This volume by itself would make a good mathematics reference book in particular for practitioners in the field of geometric modelling Due to its broad coverage and emphasis on explanation it could be used as a text for introductory mathematics courses on some of the covered topics such as topology general combinatorial algebraic and differential and geometry differential algebraic

Computer Graphics : Algorithms and Implementations D. P. Mukherjee, Debasish Jana, 2010-09 Intended as a textbook on graphics at undergraduate and postgraduate level the primary objective of the book is to seamlessly integrate the theory of Computer Graphics with its implementation The theory and implementation aspects are designed concisely to suit a semester long course Students of BE BTech level of Computer Science Information Technology and related disciplines will not only learn the basic theoretical concepts on Graphics but also learn the modifications necessary in order to implement them in the discrete space of the computer screen Practising engineers will find this book helpful as the C program implementations available in this book could be used as kernel to build a graphics system This book is also suitable for the students of M Sc Computer Science and Computer Applications BCA MCA To suit the present day need the C implementations are done for Windows operating system exposing students to important concepts of message driven programming For wider acceptability Dev C an open source integrated windows program development environment versions of the implementations of graphics programs are also included in the companion CD ROM This book introduces the students

to Windows programming and explains the building blocks for the implementation of computer graphics algorithms. It advances on to elaborate the two dimensional geometric transformations and the design and implementation of the algorithms of line drawing, circle drawing, drawing curves, filling and clipping. In addition, this well written text describes three dimensional graphics and hidden surface removal algorithms and their implementations. Finally, the book discusses illumination and shading along with the Phong illumination model.

Key Features: Includes fundamental theoretical concepts of computer graphics. Contains C implementations of all basic computer graphics algorithms. Teaches Windows programming and how graphics algorithms can be tailor made for implementations in message driven architecture. Offers chapter end exercises to help students test their understanding. Gives a summary at the end of each chapter to help students overview the key points of the text. Includes a companion CD containing C programs to demonstrate the implementation of graphics algorithms.
