The Therapy Industry Paul Moloney, 2013-06-07 Across the world anxiety stress and depression are on the increase a trend which looks set to continue as austerity measures bite The official response tells people that unhappiness is just a personal problem rather than a social one Written by a practising psychologist with nearly thirty years experience in the fields of mental health and learning disabilities The Therapy Industry offers a concise accessible and critical overview of the world of psychological practice in Britain and the USA Paul Moloney argues that much therapy is geared towards compliance and acceptance of the status quo rather than attempting to facilitate social change The Therapy Industry fundamentally challenges our conceptions of happiness and wellbeing Moloney argues that therapeutic and applied psychology have little basis in science that their benefits are highly exaggerated and they prosper because they serve the interests of power

The Psychology of People, Power and Politics Ron Roberts, 2023-05-26 From events in our everyday life to those which stride the international stage we have come to view the

Leading scholars offer perspectives from the philosophy of science on the crisis in psychiatric research that exploded after the publication of DSM 5. Psychiatry and mental health research is in crisis with tensions between psychiatry's clinical and research aims and controversies over diagnosis, treatment, and scientific constructs for studying mental disorders. At the center of these controversies is the Diagnostic and Statistical Manual of Mental Disorders (DSM), which especially after the publication of DSM 5 many have found seriously flawed as a guide for research. This book addresses the crisis and the associated extraordinary science Thomas Kuhn's term for scientific research during a state of crisis from the perspective of philosophy of science. The goal is to help reconcile the competing claims of science and phenomenology within psychiatry and to offer new insights for the philosophy of science. The contributors discuss the epistemological origins of the current crisis, the nature of evidence in psychiatric research, and the National Institute for Mental Health's Research Domain Criteria project. They consider particular research practices in psychiatry: computational, personalized, mechanistic, and user-led, and the specific categories of schizophrenia, depressive disorder, and bipolar disorder. Finally, they examine the DSM's dubious practice of pathologizing normality. Contributors: Richard P. Bentall, John Bickle, Robyn Bluhm, Rachel Cooper, Kelso Cratsley, Owen Flanagan, Michael Frank, George Graham, Ginger A. Hoffman, Harold Kincaid, Aaron Kostko, Edouard Machery, Jeffrey Poland, Claire Pouncey, Erife Tekin, Peter Zachar.
