The Haunted Self: Structural Dissociation and the Treatment of Chronic Traumatization (Norton Series on Interpersonal Neurobiology) Onno van der Hart, Ellert R. S. Nijenhuis, Kathy Steele, 2006-11-17 Life is an ongoing struggle for patients who have been chronically traumatized. They typically have a wide array of symptoms often classified under different combinations of comorbidity which can make assessment and treatment complicated and confusing for the therapist. Many patients have substantial problems with daily living and relationships including serious intrapsychic conflicts and maladaptive coping strategies. Their suffering essentially relates to a terrifying and painful past that haunts them. Even when survivors attempt to hide their distress beneath a facade of normality a common strategy therapists often feel besieged by their many symptoms and serious pain. Small wonder that many survivors of chronic traumatization have seen several therapists with little if any gains and that quite a few have been labeled as untreatable or resistant. In this book three leading researchers and clinicians share what they have learned from treating and studying chronically traumatized individuals across more than 65 years of collective experience. Based on the theory of structural dissociation of the personality in combination with a Janetian psychology of action the authors have developed a model of phase oriented treatment that focuses on the identification and treatment of structural dissociation and related maladaptive mental and behavioral actions. The foundation of this approach is to support patients in learning more effective mental and behavioral actions that will enable them to become more adaptive in life and to resolve their structural dissociation. This principle implies an overall therapeutic goal of raising the integrative capacity in order to cope with the demands of daily life and deal with the haunting remnants of the past with the unfinished business of traumatic memories. Of interest to clinicians, students of clinical psychology and psychiatry as well as to researchers all those interested in adult survivors of chronic child abuse and neglect will find helpful insights and tools that may make the treatment more effective and efficient and more tolerable for the suffering patient.

Life Writing and Schizophrenia Mary Elene Wood, 2013-09-05 How do you write your life story when readers expect you not to make sense How do you write a case history that makes sense when face to face with schizophrenia your ability to tell a diagnostic story begins to fall apart This book examines work in several genres of life writing autobiography memoir case history autobiographical fiction focused either on what it means to live with schizophrenia or what it means to understand and treat people who have received that diagnosis Challenging the romanticized connection between literature and madness Life Writing and Schizophrenia explores how writers who hear voices and experience delusions write their identities into narrative despite popular and medical representations of schizophrenia as chaos violence and incoherence The study juxtaposes these narratives to case histories by clinicians writing

their encounters with those diagnosed with schizophrenia encounters that call their own narrative authority and coherence into question Mary Wood is the author of *The Writing on the Wall Women's Autobiography and the Asylum* University of Illinois Press 1994 and has published articles on autobiography case history literature and psychiatry and narrative ethics in *Narrative British Journal of Medical Ethics Journal of Trauma and Dissociation and American Literary Realism* She teaches in the English Department at the University of Oregon
