Advances in Schizophrenia Anthony Kales,Costas N. Stefanis,John A. Talbott,2012-12-06 I am honored to introduce readers to this extraordinary volume the first in the annual International Perspectives Series Psychiatry Psychology and Neurosciences This particular volume on the Recent Advances In Schizophrenia stems from the Third Annual Pennsylvania Conference on Schizophrenia held in March 1988 At that international meeting some of the most esteemed researchers in the field surveyed our current understanding of schizophrenia Collectively their presentations capture the excitement of a research field launching into a stage of rapid worldwide advancement The last decade has seen an enormous refocusing of scientific effort on schizophrenia directed in large measure by the National Institute of Mental Health NIMH Our understanding of this mysterious disabling disorder in all its diversity has been enhanced by a host of technologies including new neuroimaging techniques cognitive psychology molecular genetics and anatomical biochemical and molecular neuropathology The resulting growth spurt in our knowledge constitutes the essence of the conference and of this volume As the following pages amply document it has been a decade of great progress one in which we can take great pride The science of our field has matured to the point that a major research thrust is now feasible one likely to have enormous benefits for schizophrenic patients and their families It is a very exciting time to be in this field and to participate in accelerating its

advances *Neural Development and Schizophrenia* Sarnoff A. Mednick, J. Meggin Hollister, 2012-12-06 This is the third meeting we have organized which has explored the meaning of fetal neural developmental disruption in the etiology of schizophrenia. The first was sponsored by the Schizophrenia Research Branch with the scientific cooperation of Dr David Shore. We met in Washington; the output of the meeting was published in a book entitled *Fetal Neural Development and Adult Schizophrenia* Cambridge University Press 1991. The next meeting was an Advanced Research Workshop sponsored by NATO and was held at n Ciocco Castelveccchio Pascoli. This meeting was reported in a NATO volume *Developmental Neuropathology of Schizophrenia* and was edited by Mednick Cannon Barr and La Fosse. The current meeting has noted several advances in the field. There are additional psychiatric illnesses which have been found to be related to maternal viral infection in the second trimester. There have been studies reported which have definitely observed a viral infection in the mothers of fetuses who later evidenced schizophrenia. More evidence has been published which has replicated the second trimester effect. In the future studies will be wise to provide serological evidence of a viral infection and information on the precise viruses involved. Another important step will be to determine whether second trimester maternal viral infection is related to a behavioral deficit in the infant. If neural development has been compromised it might be possible to detect deficits in the infant with the proper measures. We look forward to future meetings at which these new areas might be explored.

Search for the Causes of Schizophrenia Heinz Häfner, Wagner F. Gattaz, 2012-12-06 H. HAFNER and W. F. GATTAZ Between 1891 and 1955 three founders of modern psychiatry Emil Kraepelin 1856-1926, Karl Jaspers 1883-1969 and Kurt Schneider 1887-1967 lectured at the University of Heidelberg. Kraepelin for 12 years, Jaspers for over 25 years and Schneider for approximately 10 years. During this period they laid the foundations of descriptive psychopathology and modern classification and contributed essentially to the development of our current thinking on schizophrenia. In 1986 on the occasion of the 600th anniversary of the University of Heidelberg we held a symposium in memory of these three giants of psychiatry for which we chose the title *Search for the Causes of Schizophrenia*. It was jointly organized by the Central Institute of Mental Health in Mannheim and the Department of Psychiatry of the University of Heidelberg. The intention was to meet one of the major challenges of current psychiatric research, namely the fact that since Kraepelin's masterly description of Dementia praecox 1894 and E. Bleuler's slightly different definition of schizophrenia 1911 we have made only insufficient advances in clarifying the aetiology of this frequent and still often disabling mental disease.
