Handbook of Intelligence Studies Loch K. Johnson, 2007-01-24. This topical volume offers a comprehensive review of secret intelligence organizations and activities. Intelligence has been in the news consistently since 9/11 and the Iraqi WMD errors. Leading experts in the field approach the three major missions of intelligence: collection and analysis, covert action, and counterintelligence. Within each of these missions, the dynamically written essays dissect the so-called intelligence cycle to reveal the challenges of gathering and assessing information from around the world. Covert action, the most controversial intelligence activity, is explored with special attention on the issue of military organizations moving into what was once primarily a civilian responsibility. The authors furthermore examine the problems that are associated with counterintelligence: protecting secrets from foreign spies and terrorist organizations, as well as the question of intelligence accountability and how a nation can protect its citizens against the possible abuse of power by its own secret agencies. The *Handbook of Intelligence Studies* is a benchmark publication with major importance both for current research and for the future of the field. It is essential reading for advanced undergraduates, graduate students, and scholars of intelligence studies, international security, strategic studies, and political science in general.

Computer Networking and Scholarly Communication in the Twenty-First-Century University Teresa M. Harrison, Timothy Stephen, 1996-04-04. This book explores the various ways in which computer networking and, more specifically, the Internet, is changing the practices, the structure, and the products of academic scholarship. It considers research, teaching, and dissemination of knowledge across a range of disciplines in the humanities, sciences, and social sciences in order to identify particular uses of networking that will come to constitute the academic world of the future. The contributors consider such themes as how networking and particular software environments can be used to support inquiry within research specialties and how scholars in diverse disciplines respond to the availability of new networked channels of scholarly communication. In the context of education, they argue that networking can reconfigure the process of learning, encompassing new audiences, new relationships with teachers, and new learning skills adapted for the network environment. The products of such new configurations are also discussed. The future of electronic journal publication is considered by innovators who have designed some of the first experiments in refereed electronic journal publication. Finally, the new responsibilities and roles of the academic library and academic publishers in a networked environment are debated.
