Rocha, Eufemia Tarantino, Carmelo Maria Torre, Yeliz Karaca, 2020-09-28 The seven volumes LNCS 12249 12255 constitute the refereed proceedings of the 20th International Conference on Computational Science and Its Applications ICCSA 2020 held in Cagliari Italy in July 2020 Due to COVID 19 pandemic the conference was organized in an online event Computational Science is the main pillar of most of the present research industrial and commercial applications and plays a unique role in exploiting ICT innovative technologies The 466 full papers and 32 short papers presented were carefully reviewed and selected from 1450 submissions Apart from the general track ICCSA 2020 also include 52 workshops in various areas of computational sciences ranging from computational science technologies to specific areas of computational sciences such as software engineering security machine learning and artificial intelligence blockchain technologies and of applications in many fields

FME 2001: Formal Methods for Increasing Software Productivity Jose N. Oliveira, Pamela Zave, 2003-06-29 FME 2001 is the tenth in a series of meetings organized every eighteen months by Formal Methods Europe FME an independent association whose aim is to stimulate the use of and research on formal methods for software development It follows four VDM Europe Symposia four other Formal Methods Europe S posia and the 1999 World Congress on Formal Methods in the Development of Computing Systems These meetings have been notably successful in bringing gether a community of users researchers and developers of precise mathematical methods for software development FME 2001 took place in Berlin Germany and was organized by the Computer Science Department of the Humboldt Universit at zu Berlin The theme of the symposium was Formal Methods for Increasing

Software Productivity This theme recognizes that formal methods have the potential to do more for industrial software development than enhance software quality they can also increase productivity at many different points in the software life cycle The importance of the theme is borne out by the many contributed papers showing how formal methods can make software development more efficient There is an emphasis on tools that find errors automatically or with relatively little human effort There is also an emphasis on the use of formal methods to assist with critical labor intensive tasks such as program design and test case generation

International Conference on Applications and Techniques in Cyber Security and Intelligence Jemal Abawajy, Kim-Kwang Raymond Choo, Rafiqul Islam, 2017-10-20 This book presents the outcomes of the 2017 International Conference on Applications and Techniques in Cyber Security and Intelligence which focused on all aspects of techniques and applications in cyber and electronic security and intelligence research The conference provides a forum for presenting and discussing innovative ideas cutting edge research findings and novel techniques methods and applications on all aspects of cyber and electronic security and intelligence

Tests and Proofs Catherine Dubois, 2009-06-29 1 This volume contains the research papers and invited papers presented at the Third International Conference on Tests and Proofs TAP 2009 held at ETH Zurich Switzerland during July 2-3 2009

The TAP conference is devoted to the convergence of proofs and tests It combines ideas from both sides for the advancement of software quality To prove the correctness of a program is to demonstrate through impeccable mathematical techniques that it has no bugs to test a program is to run it with the expectation of discovering bugs The two techniques seem contradictory if you have proved your program it is fruitless to comb it for bugs and if you are testing it that is surely a sign that you have given up on any hope of proving its correctness Accordingly proofs and tests have since the onset of software engineering research been pursued by distinct communities using rather different techniques and tools And yet the development of both approaches leads to the discovery of common issues and to the realization that each may need the other The emergence of model checking has been one of the first signs that contradiction may yield to complementarity but in the past few years an increasing number of research efforts have encountered the need for combining proofs and tests dropping earlier dogmatic views of incompatibility and taking instead the best of what each of these software engineering domains has to offer

Towards a Service-Based Internet Witold Abramowicz, Ignacio M. Llorente, Mike Surridge, Andrea Zisman, Julien Vayssière, 2011-10-12 This volume constitutes the refereed proceedings of the Fourth European Conference ServiceWave 2011 held in Poznan Poland in October 2011 The 25 revised full papers presented together with 3 invited presentations were carefully reviewed and selected from numerous submissions They are organized in topical sections on cloud computing security privacy and trust service engineering fundamentals business services and FI PPP In addition to the scientific track 14 extended abstracts of demonstrations covering a wide spectrum of technology and application domains were accepted

Time and again we have been proven unable to engineer reliable software as easily cheaply as we imagined Cost overruns and expensive failures are the norm The problem is fundamentally one of complexity software is fundamentally complex because it must be precise Problems that appear to be specified quite easily in plain language become far more complex when written in a more formal notation such as computer code Comparisons with other engineering disciplines are deceptive One cannot easily increase the factor of safety of software in the same way that one could in building a steel structure for example Software is typically built assuming perfection often without adequate safety nets in case the unthinkable happens In such circumstances it should not be surprising to find out that seemingly minor errors have the potential to cause entire software systems to collapse The goal of this book is to uncover techniques that will aid in overcoming complexity and enable us to produce reliable dependable computer systems that will operate as intended and yet are produced on time in budget and are evolvable both over time and at run time We hope that the contributions in this book will aid in understanding the nature of software complexity and provide guidance for the control or avoidance of complexity in the engineering of complex software systems

Engineering of Complex Computer Systems Guangdong Bai,Fuyuki Ishikawa,Yamine Ait-Ameur,George A. Papadopoulos,2024-09-28 This book constitutes of the proceedings from the 28th International Conference on Engineering of Complex Computer Systems ICECCS 2024 held in Limassol Cyprus during June 19 21 2024 The 18 full papers and 4 short papers presented here were carefully reviewed and selected from 68 submissions These papers have been categorized into the following sections Machine Learning and Complex Systems Neural Network Verification A I for Software Engineering Smart Contract Formal Methods Security Program Analysis

Cyber-Physical System Design from an Architecture Analysis Viewpoint Shin Nakajima,Jean-Pierre Talpin,Masumi Toyoshima,Huafeng Yu,2017-05-10 Providing a wide variety of technologies for ensuring the safety and dependability of cyber physical systems CPS this book offers a comprehensive introduction to the architecture centric modeling analysis and verification of CPS In particular it focuses on model driven engineering methods including architecture description languages virtual prototyping and formal analysis methods CPS are based on a new design paradigm intended to enable emerging software intensive systems Embedded computers and networks monitor and control the physical processes usually with the help of feedback loops where physical processes affect computations and vice versa The principal challenges in system design lie in this constant interaction of software hardware and physics Developing reliable CPS has become a critical issue for the industry and society because many applications such as transportation power distribution medical equipment and tele medicine are dependent on CPS Safety and security requirements must be ensured by means of powerful validation tools Satisfying such requirements including quality of service implies having formally proven the required properties of the system before it is deployed The book is concerned with internationally standardized modeling languages such as AADL SysML and MARTE As the effectiveness of the technologies is demonstrated with industrial sample cases from the automotive and aerospace sectors

links between the methods presented and industrial problems are clearly understandable Each chapter is self contained addressing specific scientific or engineering problems and identifying further issues In closing it includes perspectives on future directions in CPS design from an architecture analysis viewpoint **Nutritional Care of the Patient with**
