Situational Awareness for Assistive Technologies Mehul Bhatt,Hans Werner Gsgen,2012 The development of smart assistive technology for personal living and public environments is an opportunity that has been recently recognized by research labs across the world A particular theme that has garnered attention in many countries is the problem of an aging population The combination of a much larger elderly population and the ever increasing cost of providing full time human care for them means that finding practical assisted living solutions for this group is becoming increasingly important Computing is the obvious choice to provide an answer to this growing problem but to have a real impact computer based assistive technologies will need to possess the ability to interact with and interpret the actions and situations of those they are designed to assist The papers in this book explore the diversity of the field of ambient intelligence as well as the wide range of approaches and variety of applications that may prove to be possible Consideration is given to how space action time and other contexts can be represented and reasoned about for use in sensory mapping multi agent interactions assisted living and even emergency responses Many techniques are examined variety represents one of the most important strengths of this area meaning that the weakness of one approach can be offset by the capability of others The book consists of research contributions dealing with the crucial notion of situational awareness within assistive smart systems emerging as an overarching concept An applied computer science character has been retained whilst bringing to the fore research projects where formal knowledge representation and reasoning techniques have been demonstrated to be applicable to areas within the broader field of ambient intelligence and smart environments

Advances in Non-Linear Modeling for Speech Processing Raghunath S. Holambe,Mangesh S. Deshpande,2012-02-21 Advances in Non Linear Modeling for Speech Processing includes advanced topics in non linear estimation and modeling techniques along with their applications to speaker recognition Non linear aeroacoustic modeling approach is used to estimate the important fine structure speech events which are not revealed by the short time Fourier transform STFT This aeroacoustic modeling approach provides the impetus for the high resolution Teager energy operator TEO This operator is characterized by a time resolution that can track rapid signal energy changes within a glottal cycle The cepstral features like linear prediction cepstral coefficients LPCC and mel frequency cepstral coefficients MFCC are computed from the magnitude spectrum of the speech frame and the phase spectra is neglected To overcome the problem of neglecting the phase spectra the speech production system can be represented as an amplitude modulation frequency modulation AM FM model To demodulate the speech signal to estimation the amplitude envelope and instantaneous frequency components the energy separation algorithm ESA and the Hilbert transform demodulation HTD

algorithm are discussed Different features derived using above non linear modeling techniques are used to develop a speaker identification system Finally it is shown that the fusion of speech production and speech perception mechanisms can lead to a robust feature set *Handbook of Energy-Aware and Green Computing - Two Volume Set* Ishfaq Ahmad, Sanjay

Dynamic Cloud Collaboration Platform Mohammad Mehedi Hassan,Eui-Nam Huh,2012-09-13 Present trends in cloud providers CPs capabilities have given rise to the interest in federating or collaborating clouds thus allowing providers to revel on an increased scale and reach more than that is achievable individually Current research efforts in this context mainly focus on building supply chain collaboration SCC models in which CPs leverage cloud services from other CPs for seamless provisioning Nevertheless in the near future we can expect that hundreds of CPs will compete to offer services and thousands of users will also compete to receive the services to run their complex heterogeneous applications on a cloud computing environment In this open federation scenario existing collaboration models i e SCC are not applicable since they are designed for static environments where a priori agreements among the parties are needed to establish the federation To move beyond these shortcomings Dynamic Cloud Collaboration Platform establishes the basis for developing dynamic advanced and efficient collaborative cloud service solutions that are scalable high performance and cost effective We term the technology for inter connection and inter operation of CPs in open cloud federation as Dynamic Cloud Collaboration DCC in which various CPs small medium and large of complementary service requirements will collaborate dynamically to gain economies of scale and enlargements of their capabilities to meet quality of service QoS requirements of consumers In this context this book addresses four key issues when to collaborate triggering circumstances whom to collaborate with suitable partners how to collaborate architectural model and how to demonstrate collaboration applicability simulation study It also provides solutions which are effective in real environments
