

#### **Level 0**

No processes or tools for managing secrets — secrets sprawl in the SDLC. No detection (and remediation) in place.

#### **Level 1**

Secrets are unencrypted at rest but grouped in configuration files shared across multiple teams. Scanning for secrets is triggered manually at times, but developers are rarely involved in remediation.

#### **Level 2**

Secrets are checked encrypted into repositories with decryption keys stored in a secure vault. Secrets scanning and rotation are performed periodically.

#### **Level 3**

Secrets are scoped, stored in a vault and shared using a secrets manager. Automated detection on shared repositories and final artifacts is continuous.

#### **Level 4**

Secrets are scoped, stored in a vault and shared with a secrets manager. Detection is preventive and integrated into development workflows (local workstations, CI pipelines, etc.). Developers remediate their incidents.
