## **Long Summer How Climate Changed:**

The Long Summer Brian M. Fagan, 2004-01-01 The Long Summer illuminates for the first time the centuries long pattern of human adaptation to the demands and challenges of an ever changing climate demands and challenges that are still with us today **BOOK JACKET**

**The Long Summer** Brian Fagan, 2004-12-29 Humanity evolved in an Ice Age in which glaciers covered much of the world But starting about 15 000 years ago temperatures began to climb Civilization and all of recorded history occurred in this warm period the era known as the Holocene the long summer of the human species In The Long Summer Brian Fagan brings us the first detailed record of climate change during these 15 000 years of warming and shows how this climate change gave rise to civilization A thousand year chill led people in the Near East to take up the cultivation of plant foods a catastrophic flood drove settlers to inhabit Europe the drying of the Sahara forced its inhabitants to live along the banks of the Nile and increased rainfall in East Africa provoked the bubonic plague The Long Summer illuminates for the first time the centuries long pattern of human adaptation to the demands and challenges of an ever changing climate challenges that are still with us today

**The End of the Long Summer** Dianne Dumanoski, 2010-07-13 For the past twelve thousand years Earth s stable climate has allowed human civilization to flourish But this long benign summer is an anomaly in the Earth s history and one that is rapidly coming to a close The radical experiment of our modern industrial civilization is now disrupting our planet s very metabolism our future hinges in large part on how Earth responds Climate change is already bearing down hitting harder and faster than expected The greatest danger is not extreme yet discrete weather events such as Hurricane Katrina or the calamitous wildfires that now plague California but profound and systemic disruptions on a global scale Contrary to the pervasive belief that climate change will be a gradual escalator ride into balmy temperatures the Earth s climate system has a history of radical shifts dramatic shocks that could lead to the collapse of social and economic systems The question is no longer simply how can we stop climate change but how can we as a civilization survive it The guiding values of modern culture have become dangerously obsolete in this new era Yet as renowned environmental journalist Dianne Dumanoski shows little has been done to avert the crisis or to prepare human societies for a time of growing instability In a work of astonishing scope Dumanoski deftly weaves history science and culture to show how the fundamental doctrines of modern society have impeded our ability to respond to this crisis and have fostered an economic globalization that is only increasing our vulnerability at this critical time She exposes the fallacy of banking on a last minute technological fix as well as the perilous trap of believing that humans can succeed in the quest to control nature Only by restructuring our global civilization based on the principles that have allowed Earth s life and our ancestors to survive catastrophe diversity redundancy a degree of self sufficiency social solidarity and an aversion to excessive integration can we restore the flexibility needed to weather the trials ahead In this powerful and prescient book Dumanoski moves beyond now ubiquitous environmental buzzwords about green industries and clean energy to provide a new cultural map through this
