was crucial in the establishment of concepts and institutions of religion and witnessed extended waves of urbanisation Rome being central to this In addressing this problem this book fills a significant gap in the scholarship on urban religion across time Taking seriously the proposition that space is condition medium and outcome of social relations the development of urban religion in lived urban space and urban culture or urbanity offers a lens onto processes of religious change that have been neglected for the history of religion and for the study of urbanism The key thesis is that city space engineered the major changes that revolutionised religions This stimulating book makes use of archaeology and history to address religion as an essential component of urban life in both the past and the present With a strong basis in the ancient Mediterranean as well as an insightful view of modern urban life R pke emphasizes that the practice and performance of religion at the everyday level is as essential in the creation of an urban ethos as the grand temples and institutions promulgated by the elite Monica L Smith author of *Cities The First 6 000 Years* J rg R pke offers a characteristically original and learned series of reflections on some of the many ways in which the history of religions and the history of cities might be entangled *Urban Religion* offers no single overarching thesis but it is consistently thought provoking and suggests many intriguing lines of investigation for the future Greg Woolf Institute of Classical Studies London

Liberation Theology for a Democratic Society Heinrich Bedford-Strohm, 2018 Public Theology is an indispensable dimension of the calling of the church As minister bishop and academic teacher Heinrich Bedford Strohm in this collection of articles in English language draws on a multitude of experiences in theological reflection as well as in pastoral praxis The contributions of this volume include fundamental reflections on the role of churches and religion in the public sphere But they also deal with issues of material ethics such as human rights economic justice overcoming violence ecology or interreligious dialogue The volume shows how theology can give moral guidance not only for the church but also for society as a whole

Evolutionary Processes in the Natural History of Religion Hansjörg Hemminger, 2021-09-22 The study of religion by the humanities and social sciences has become receptive for an evolutionary perspective Some proposals model the evolution of religion in Darwinian terms or construct a synergy between biological and non Darwinian processes The results however have not yet become truly interdisciplinary The biological theory of evolution in form of the Extended Evolutionary Synthesis EES is only sparsely represented in theories published so far by scholars of religion Therefore this book reverses the line of view and asks how their results assort with evolutionary biology How can the subject area religion integrated into behavioral biology How is theory building affected by the asymmetry between the scarce empirical knowledge of prehistoric religion and the body of knowledge about extant and historic religions How does hominin evolution in general relate to the evolution of religion Are there evolutionary pre adaptations Subsequent versions of evolutionary biology from the original Darwinism to EES are used in interdisciplinary constructs Can they be integrated into a comprehensive theory The biological concept most often used is co evolution in form of a gene culture co evolution However the term denotes a process different from biological co evolution

Important EES concepts do not appear in present models of religious evolution e g neutral evolution evolutionary drift evolutionary constraints etc How to include them into an interdisciplinary approach Does the cognitive science of religion CSR harmonize with behavioral biology and the brain sciences Religion as part of human culture is supported by a complex multi level behavioral system How can it be modeled scientifically The book addresses graduate students and researchers concerned about the scientific study of religion and biologist interested in interdisciplinary theory building in the field

of the Standard Model including the Higgs boson the the socalled God Particle are directly represented in terms of the interaction The book introduces a new paradigm of a three dimensional time as an essential extension of Einstein s relativity theory Interrelation between the classical and quantum physics is illustrated Examples of applications in cosmology and the significance of the neutron decay in the evolution of matter and of life on the earth are included
