Perspectives On Genetic Patenting Religion Science And Industry In Dialogue:

Perspectives on Genetic Patenting Audrey R. Chapman,1999-01-01 *Unprecedented Choices* Audrey R.

Chapman,1999-01-01 We face unprecedented choices in genetics for which traditional ethics provides little direct guidance What role can the religious community play in addressing the ethical and theological issues that even scientists now acknowledge as urgent cover

Claiming Power Over Life Mark J. Hanson,2001-10-03 Developments in biotechnology such as cloning and the decoding of the human genome are generating questions and choices that traditionally have fallen within the realm of religion and philosophy the definition of human life human vs divine control of nature the relationship between human and non human life and the intentional manipulation of the mechanisms of life and death In *Claiming Power over Life* eight contributors challenge policymakers to recognize the value of religious views on biotechnology and discuss how best to integrate the wisdom of the Christian and Jewish traditions into public policy debates Arguing that civic discourse on the subject has been impoverished by an inability to accommodate religious insights productively they identify the ways in which religious thought can contribute to policymaking Likewise the authors challenge religious leaders and scholars to learn about biotechnology address the central issues it raises and participate constructively in the moral debates it engenders The book will be of value to policymakers religious leaders ethicists and all those interested in issues surrounding the intersection of religion and biotechnology policy

The Oxford Handbook of Bioethics Bonnie Steinbock,2007-02-16 Bonnie Steinbock presents *The Oxford Handbook of Bioethics* an authoritative state of the art guide to current issues in bioethics Thirty four contributors reflect the interdisciplinarity that is characteristic of bioethics and its increasingly international character Thirty topics are covered in original essays written by some of the world s leading figures in the field as well as by some newer up and comers The essays address both perennial issues such as the methodology of bioethics autonomy justice death and moral status and newer issues such as biobanking stem cell research cloning pharmacogenomics and bioterrorism Other topics concern mental illness and moral agency the rule of double effect justice and the elderly the definition of death organ transplantation feminist approaches to commodification of the body life extension advance directives physician assisted death abortion genetic research population screening enhancement research ethics and the implications of public and global health for bioethics Anyone who wants to know how the central debates in bioethics have developed in recent years and where the debates are going will want to consult this book It will be an invaluable resource not only for scholars and graduate students in bioethics but also for those in philosophy medicine law theology social science public policy and public health who wish to keep abreast of developments in bioethics

The Genome Defense Jorge L. Contreras,2021-10-26 In this riveting behind the scenes courtroom drama a brilliant legal team battles corporate greed and government overreach for our fundamental right to control our genes When attorney Chris Hansen learned that the U S government was issuing patents for human genes to biotech companies his first thought was

How can a corporation own what makes us who we are Then he discovered that women were being charged exorbitant fees to test for hereditary breast and ovarian cancers tests they desperately needed all because Myriad Genetics had patented the famous BRCA genes So he sued them Jorge L Contreras one of the nation s foremost authorities on human genetics law has devoted years to investigating the groundbreaking civil rights case known as AMP v Myriad In The Genome Defense Contreras gives us the view from inside as Hansen and his team of ACLU lawyers along with a committed group of activists scientists and physicians take their one in a million case all the way to the U S Supreme Court Contreras interviewed more than a hundred key players involved in all aspects of the case from judges and policy makers to ethicists and genetic counselors as well as cancer survivors and those whose lives would be impacted by the decision expertly weaving together their stories into a fascinating narrative of this pivotal moment in history The Genome Defense is a powerful and compelling story about how society must balance scientific discovery with corporate profits and the rights of all people Templeton Science and Religion Book Series Bundle J. Wetzel van Huyssteen, Khalil Chamcham, 2013-08-01 In the Templeton Science and Religion Series scientists from a wide range of fields distill their experience and knowledge into brief tours of their respective specialties The series was launched in 2008 with the publication of Harold G Koenig s book Medicine Religion and Health Since that time the series editors J Wentzel van Huyssteen and Khalil Chamcham have expanded it to nine titles covering everything from paleontology to neuroscience to technology Also found in the bundle is the TSR Reader and a companion study guide The books found in the bundle are Medicine Religion and Health by Harold G Koenig Neuroscience Psychology and Religion by Malcolm Jeeves and Warren Brown Technology and Religion by Noreen Herzfeld Horizons of Cosmology by Joseph Silk Paleontology by Ian Tttersall Cognitive Science Religion and Theology by Justin L Barrett Ecology and the Environment by R J Berry The Language of Genetics by Denis Alexander Mathematics and Religion by Javier Leach The Templeton Science and Religion Reader The Templeton Science and Religion Study Guide This bundle is only sold in e book format **Commodifying Bodies** Nancy Scheper-Hughes, Loic Wacquant, 2002-10-10 Increasingly the body is a possession that does not belong to us It is bought and sold bartered and stolen marketed wholesale or in parts The professions especially reproductive medicine transplant surgery and bioethics but also journalism and other cultural specialists have been pliant partners in this accelerating commodification of live and dead human organisms Under the guise of healing or research they have contributed to a new ethic of parts for which the divisible body is severed from the self torn from the social fabric and thrust into commercial transactions as organs secretions reproductive capacities and tissues responding to the dictates of an incipiently global marketplace Breaking with established approaches which prioritize the body as text the chapters in this book examine not only images of the body turned merchandise but actually existing organisms considered at once as material entities semi magical tokens symbolic vectors and founts of lived experience The topics covered range from the cultural disposal and media treatment of corpses the biopolitics of cells sperm banks and

eugenics to the international trafficking of kidneys the development of transplant tourism to the idioms of corporeal exploitation among prizefighters as a limiting case of fleshly commodity This insightful and arresting volume combines perspectives from anthropology law medicine and sociology to offer compelling analyses of the concrete ways in which the body is made into a commodity and how its marketization in turn remakes social relations and cultural meanings The History and Future of Bioethics John H. Evans, 2012 Evans closely examines the history of the bioethics profession **Brave New World?** Celia Deane-Drummond, 2003-11-01 One of the key issues facing us in the next millennium is the ability to manipulate the genetics of living organisms The possibility of manipulating human genetics raises many theological ethical and socio political issues These include specific decisions about whether the technology will be developed how it will be applied and more general questions about the technical manipulation of natural processes From a theological perspective the human genome project not only challenges particular doctrines such as that of creation eschatology and anthropology but also raises particular issues of social justice and medical ethics The purpose of this book is to bring together the collective expertise of theologians scientists and social scientists in order to provide a forum for critique and public debate focused on the human genome project It is hoped that the results presented in this book offer a sophisticated theological and ethical response Genetics and Christian Ethics Celia Deane-Drummond, 2006 In the immediate future we are likely to witness significant developments in human genetic science It is therefore of critical importance that Christian ethics engages with the genetics debate since it affects not just the way we perceive ourselves and the natural world but also has wider implications for our society This book considers ethical issues arising out of specific practices in human genetics including genetic screening gene patenting gene therapy genetic counselling as well as feminist concerns Genetics and Christian Ethics argues for a particular theo ethical approach that derives from a modified version of virtue ethics drawing particularly on a Thomistic understanding of the virtues especially prudence or practical wisdom and justice The book demonstrates that a theological voice is highly relevant to contested ethical debates about genetics
