Textbook of Ultrasound in Obstetrics and Gynecology Asim Kurjak, Frank A Chervenak, 2011-08 Ultrasound is the backbone of modern obstetric and gynecology practice. Recent technological breakthroughs in diagnostic ultrasound, including the advent of color Doppler, power Doppler, three dimensional and four dimensional imaging, have led ultrasound to surpass the expectations of Ian Donald, its visionary father. The text is divided into three parts: general aspects, obstetrics, and gynecology. The first and second textbooks were successful in this endeavor, but with the explosion of knowledge, it was clear that an expanded and updated third edition would be invaluable. Section one deals with a variety of topics that lay the foundation for the rest of the book. Section two addresses the myriad subtopics in obstetric ultrasound that optimize the care of pregnant women and fetal patients. The last section addresses the essential role that ultrasound plays in the many dimensions of clinical gynecology. **Donald School Textbook of Ultrasound in Obstetrics and Gynecology** Asim Kurjak, Frank A Chervenak, **Modelling, Stability Analysis, and Control of a Buck Converter** Moleykutty George, Jagadeesh Pasupuleti, 2024-09-18 A generalized approach in a systematic way is inevitable to oversee the challenges one may face in the product development stage to acquire the desired output performance under various operating conditions. This book, *Modelling, Stability Analysis, and Control of a Buck Converter*, Digital Simulation of Buck Regulator Systems in MATLAB, written and structured to cater to readers of different levels, aims to provide a clear understanding of different aspects of modelling and practical implementation. The operation of the semiconductor switches, switching characteristics of the energy storage elements, stability analysis, state space approach, transfer function modelling, mathematical modelling, and closed loop control of the buck converter, which are illustrated in this book, can be extended to any other similar system independent of complexity. This book covers modelling and control of buck converters and provides sufficient understanding to model and control complex systems. Discusses step response, pole-zero maps, Bode and root locus plots for stability analysis and design of the controller. Explains time response, frequency response, and stability analysis of the resistive-capacitive (R-C), resistive-inductive (R-L), and R-L-C circuits to support the design of the buck converter. Includes simulation and experimental results to demonstrate the effectiveness of closed loop buck regulator systems using proportional (P), integral (I), and P-I controllers to

achieve the desired output performance Provides MATLAB codes Algorithms and MATLAB PSB models to help readers with digital simulation It is primarily written for senior undergraduate and graduate students academic researchers and specialists in the field of electrical and electronics engineering
