*Computing Statistics under Interval and Fuzzy Uncertainty* Hung T. Nguyen, Vladik Kreinovich, Berlin Wu, Gang Xiang, 2011-11-17 In many practical situations we are interested in statistics characterizing a population of objects e g in the mean height of people from a certain area Most algorithms for estimating such statistics assume that the sample values are exact In practice sample values come from measurements and measurements are never absolutely accurate Sometimes we know the exact probability distribution of the measurement inaccuracy but often we only know the upper bound on this inaccuracy In this case we have interval uncertainty e g if the measured value is 1 0 and inaccuracy is bounded by 0 1 then the actual unknown value of the quantity can be anywhere between 1 0 0 1 0 9 and 1 0 0 1 1 1 In other cases the values are expert estimates and we only have fuzzy information about the estimation inaccuracy This book shows how to compute statistics under such interval and fuzzy uncertainty The resulting methods are applied to computer science optimal scheduling of different processors to information technology maintaining privacy to computer engineering design of computer chips and to data processing in geosciences radar imaging and structural mechanics

Valberg, 2018-06-26 Might this be a dream In this book distinguished philosopher J J Valberg approaches the familiar question about dream and reality by seeking to identify its subject matter what is it that would be the dream if this were a dream It turns out to be a subject matter that contains the whole of the world space and time but which like consciousness for Sartre is nothing in itself This subject matter the personal horizon lies at the heart of the main topics the first person the self and the self in time explored at length in the book The personal horizon is Valberg contends the subject matter whose center each of us occupies and which for each of us ceases with death This ceasing to be presents itself solipsistically not just as the end of everything for me but as the end of everything absolutely Yet since it is the same for everyone this cannot be Death thus confronts us with an impossible fact something that cannot be but will be The puzzle about death is one of several extraphilosophical puzzles about the self that Valberg discusses puzzles that can trouble everyday consciousness without any contribution from philosophy Nor can philosophy resolve the puzzles Its task is to get to the bottom of them and in this respect to understand ourselves a task philosophy has always set itself

**Adventures in Paranormal Investigation** Joe Nickell, 2014-04-23 Tales of alien abductions miraculous relics and haunted castles have attracted believers and skeptics across the globe for centuries Paranormal investigator Joe Nickell tackles the world's most seemingly inexplicable myths in *Adventures in Paranormal Investigation* With four decades of experience in the field Nickell employs skepticism and scientific analysis to pull truth from the mires of false evidence and trickery that surround both old and new legends and mysteries Unlike authors who engage in hype and sensationalism in order to foster or debunk myths Nickell approaches each case with a rational and scientific approach intended to find the truth Occam's Razor all things being equal the simplest solution is the

best one is a principal instrument in his investigative toolbox as well as the belief that it is the claimant's responsibility to provide the extraordinary proof required in such extraordinary cases. *Adventures in Paranormal Investigation* features Nickell's on-site explorations in unusual phenomena. Among the forty unique cases Nickell examines mysteries ranging from snake charmers who purport to hold influence over the reptiles to the Holocaust victims who reportedly haunt a gas chamber in Dachau to Lake Simcoe's resident lake monster Igopogo in Canada. In addition to the case studies Nickell analyzes how the propensity to fantasize can affect human perceptions of and belief in paranormal activity and how his personal experience with the paranormal was altered when intuition led to the discovery of a daughter he didn't know existed. More than just another myth-busting text, *Adventures in Paranormal Investigation* brings together reason and scientific analyses to explain both the phenomena and the role of human perception therein, establishing Nickell as the foremost paranormal investigator of our time.

*The Science of Ghosts* Joe Nickell, 2012-07-03 Are ghosts real? Are there truly haunted places, only haunted people, or both? And how can we know? Taking neither a credulous nor a dismissive approach, this first of its kind book solves those perplexing mysteries and more, even answering the question of why we care so very much. Putting aside purely romantic tales, this book examines the actual evidence for ghosts, from eyewitness accounts to mediumistic productions such as diaphanous forms materializing in dim light, spirit photographs, ghost detection phenomena, and even CSI-type trace evidence. Offering numerous exciting case studies, this book engages in serious investigation rather than breathless mystifying. Pseudoscience, folk legends, and outright hoaxes are challenged and exposed, while the historical, cultural, and scientific aspects of ghost experiences and haunting reports are carefully explored. The author, the world's only professional paranormal investigator, brings his skills as a stage magician, private detective, folklorist, and forensic science writer to bear on a topic that demands serious study.
