EBOOK: Enhancing Primary Science: Developing Effective Cross-Curricular Links Lois Kelly, Di Stead, 2013-02-16 How can other subjects in the primary curriculum enhance the teaching and learning of primary science The key argument in the book is that children's learning is enriched through both discrete subject teaching and cross curricular approaches to the curriculum and that children become more effective learners when they make links between the different subjects This book gives helpful insights into why making effective cross curricular links enriches science and discusses when and how to make effective and authentic links between science and other subjects Each chapter tackles a particular subject and considers how it can enhance science learning through a variety of approaches and a wealth of ideas for the classroom Written in a clear accessible and informative style this book Includes contributions from a range of expert practitioners Provides a good balance between theory and practice Includes practical advice and tasks to help develop your confidence and skill in cross

curricular teaching is illustrated with examples of pupils' voice. This book is ideal for students, teachers and schools who wish to adopt a cross-curricular approach to teaching and enhance their primary science curriculum. Contributors: Alison Brade, Mark Hamill, Sharon Harris, Shelagh Hendry, Alison Hermon, Pat Hughes, Arthur Kelly, Liz Lawrence and Cliff Porter. Let this book take you by the hand and guide you skilfully past the pitfalls of cross-curricular teaching in primary science whilst enjoying the celebration of creative and effective links between science and other subjects. It is full of practical suggestions for cross-curricular work but it never loses sight of the need for clear learning goals. Rooted in the principles of collaborative learning, this book inspires and informs. Anne Goldsworthy, Independent Science Consultant. This important book explores a practical framework for cross-curricular teaching of science through a closely referenced theoretical rationale. There are a range of open-ended tasks that illustrate the rich learning opportunities that can be planned for when expert subject knowledge combines with a pedagogy for enquiry. This is an essential read for all teachers inspired to tailor the curriculum to the needs and interests of their children. Alison Peacock, Headteacher of The Wroxham School and Transformative Learning Alliance Network Leader for the Cambridge Primary Review. I enjoyed this book sharing insights into cross-curricular approaches to primary science. The authors have successfully demonstrated how they have put theory into practice. There are many useful activities clearly outlined for use in the classroom based on the authors' own experiences. The reader will gain sound knowledge and understanding of how and why cross-curricular approaches can enhance primary science through worked examples. My particular favourite was the History of Bread. I will certainly recommend this book to my students. Kathy Schofield, Senior Lecturer for Primary Science, Manchester Metropolitan University, UK. These ideas have given me the confidence that cross-curricular approaches can enrich scientific provision rather than dilute it. Primary School Teacher.

Assessment in Geographical Education: An International Perspective Theresa Bourke, Reece Mills, Rod

Lane, 2022-02-27. In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators, it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit-for-purpose assessments that track and improve student learning. While there is a substantial literature on evidence-based assessment in secondary school contexts, research exploring best practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This

scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland, and Singapore. What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence-based practices for assessing students' knowledge and skills.

Knowledge and Understanding of the World Richard Woolley, Jane Johnston, Emily Rotchell, 2011-01-13

Teaching the Primary Curriculum for Constructive Learning Michael Littledyke, Laura Huxford, 2013-10-23

First Published in 1998, there is a current preoccupation with educational standards with claims that overall standards of achievement have fallen. The purpose of this book, therefore, is to address the question of how children learn across the primary National Curriculum subjects with implications for effective teaching approaches. The book emphasises a constructivist view of learning which acknowledges that children have views and attitudes which are formed as a result of experiences in and out of school and that these must be taken into account if meaningful and transferable learning is to be achieved.
