# Reasons To Remember

**Henry James**

## Reasons To Remember:

**Reasons** Eric Wiland, 2012-05-17 When we say we act for a reason what do we mean And what do reasons have to do with being good or bad Introducing readers to a foundational topic in ethics Eric Wiland considers the reasons for which we act You do things for reasons and reasons in some sense justify what you do Further your reasons belong to you and you know the reasons for which you act in a distinctively first personal way Wiland lays out and critically reviews some of the most popular contemporary accounts of how reasons can function in all these ways accounts such as psychologism factualism hybrid theories constitutivist theories and finally Anscombean views of reasons Reasons also includes a brief guide to further reading to help readers master this important topic in contemporary writing in ethics and the philosophy of action **The American College**, 1910 **Moral Reason** Julia Markovits, 2014-03 Develops and defends a version of a desire based internalist account of what normative reasons are and counters it with an internalist defense of universal moral reason built on Kant's formula of humanity *Reasons from Within* Alan H. Goldman, 2009-11-26 Do the reasons we have for acting as we do derive from our concerns and desires or are there objective values in the world that we are rationally required to pursue and protect Alan H Goldman argues for the internalist or subjectivist view of practical reasons on the grounds that it is simpler more unified and more comprehensible than the rival objectivist position He provides a naturalistic account of practical rationality in terms of coherence within sets of desires or motivational states and between motivations intentions and actions Coherence is defined as the avoidance of self defeat the defeat of one's own deepest concerns The demand for coherence underlies both practical and theoretical reason and derives from the natural aims of belief and action In clarifying which desires create reasons drawing on the literature of cognitive psychology Goldman offers conceptual analyses of desires emotions and attitudes Reasons are seen to derive ultimately from our deepest occurrent concerns These concerns require no reasons themselves but provide reasons for many more superficial desires In defense of this theory Goldman argues that rational agents need not be morally motivated or concerned for their narrow self interest Objective values would demand such concern They would be independent of our desires but would provide reasons for us to pursue and protect them They would require rational agents to be motivated by them But Goldman argues we are not motivated in that way and it makes no sense to demand that our informed and coherent desires be generally other than they are We need not appeal to such objective values in order to explain how our lives can be good and meaningful Reasons from Within will appeal to anyone interested in the nature of values and reasons particularly students of philosophy psychology and decision theory

The authors take you through real world examples that demonstrate how these new features are used with other APIs in Java EE 8. You'll see the new and exciting ways JSF applications can use to communicate between a client and a server such as using WebSockets invoking bean methods directly from Ajax, executing client side JavaScript when Ajax calls complete and more. Along the way you'll broaden your knowledge of JSF components and web APIs, best practices, and learn a great deal about the internals of JSF and the design decisions that have been made when building the JSF API. For example, you'll see what artefacts are now CDI injectable, how CDI changed JSF internally, and what some of the caveats are when working with the CDI versions of a JSF artefact. Furthermore, you'll build an example application from scratch. After reading *The Definitive Guide to JSF in Java EE 8* you'll be ready to build your own efficient and secure web applications. What You Will Learn: Leverage the new features in JSF 2.3 in your existing applications; Integrate JSF and CDI; Use the brand new Component Search Expression framework which enables you to more easily locate components from your template; Extend the Component Search Expression framework with your own search operators; Work with the different ways of mapping requests to JSF; make your application use extensionless URLs and programmatically inspect which resources are present in your application; Master the best practices for web application development and see which are obsolete. Who This Book Is For: Existing JSF or Java developers who need to create a web UI. No prior knowledge of JSF is required, but the book does skew towards the more experienced developer. Concepts such as dependency injection and MVC are assumed to be known, as is a general knowledge about HTML, HTTP, and other web standards.     **The Trial at Bar of Sir Roger C.D. av de tekniska unika identifierare som behövs för att Internet ska fungera dvs idag DNS och BGP flödena av protokoll för användning av namn och nummer på Internet. Båda dimensionerna de organisatoriska och tekniska följer samma designprinciper och generellt är det meningsfullt att se Internet som en ekologi av aktörer snarare än en organisation i strikt teoretiska termer. Exempelvis finns ingen tydlig vergripande strategi organisationsnummer eller i neutrbetalare. Det är dessa designprinciper som ligger väl i linje med systemarkitektursprinciper för datorsystem som är orsaken till Internets lager design där man generellt inte ska bry sig om vad som händer på andra lager än sitt eget beskrivet som separation of concerns eller i dubbel negation high cohesion i texten samt att ha en minimalistisk ansats till koordinering och enbart koordinera eller skapa beroenden mellan enheter både tekniskt och organisatoriskt när det verkligen behövs beskrivet som minimum coordination eller low coupling i texten. Den andra delen fokuserar på hur Internet kan socialt påverkas eller förändras till något annat eller till något med en annan funktion sett som en styrd organisation. Jag använder begreppet social robusthet som motpol till teknisk robusthet som i hur man tekniskt kan förstå Internet för att diskutera dessa aspekter. Slutsatserna här mynnar ut i att Internets explicita bottom up och problemsuppdelnings design gör det märkbart svårt för någon att medvetet påverka Internet för att ändra dess beskaffenhet och dessutom visar jag att även om man praktiskt lyckas ta över de formellt beslutande är den exempelvis ICANNs och IETFs styrelser så finns det inga formella eller praktiska hinder för att bara ignorera dem dvs switching costs för just ICANN eller IETF är låga om man tekniskt omstrukturerar med att konfigurera om rutter och routing tabeller och betydligt enklare än att gå från IPv4 till IPv6 där utrustning kan behövas ersättas och därmed en betydligt högre switching cost. Med andra ord det är enklare att byta ut Internets koordinerare än att byta ut Internet mot något som fungerar annorlunda. Den remot är den rådande politiska världsordningen ett hot mot Internet eftersom den regelstyrda och koordinerade världsordningen inte längre är lika självklar som den varit tidigare. Den tredje och sista studien fokuserar på neutralitet dvs rätten till tverksoperatörer har att fånga värde i andra dimensioner än trafikmängd som en praktiskt effekt av hur Internet styrs och fungerar. Det primära praktiska bidraget är att neutralitet inte för ses som enbart en reglerings och lagstiftningfråga utan det är mer relevant att prata om i termer av neutralitet i praktiken. I den bemärkelsen är lagstiftningens vara eller inte vara mindre intressant än praktisk neutralitets vara eller inte vara och en tyngdpunktsförskjutning i den offentliga debatten hade fört diskussionen närmare hur Internet fungerar. Sammanfattningsvis ger Internets designprinciper att marknadskrafter och ej direkt reglering ska möjliggöra neutralitet. För att förtydliga tanken är att det ska finnas konkurrens inom de flesta nivåer eller lager och att det är av vikt att det finns konkurrens rakt igenom så att en kundvilja för paketneutralitet på tjänstenivå även påverkar nätgar och infrastrukturnivå så att det är användarnas efterfrågan som leder till neutralitet om den användarviljan finns. Dock kan det mycket väl vara så att man som användare inte är intresserad av neutralitet och därför tjänsteleverantörer inte tvingas vara neutrala genom lagstiftning där det går stick i stäv med designprinciperna. Inte heller ska en grupps vilja kring neutralitet påverka andras möjligheter att vilja. Genomgående identifierar jag två kolliderande

v rldsbilder den distribuerade regelstyrda och koordinerade ordningen i sitt perspektiv med sina f rk mpar och den mer integrerande och suver na v rldsordningen med sitt perspektiv och sina f rk mpar Rent praktiskt uppfyller Internet en nskad funktion i den tidigare men ej i den senare d Internet designm ssigt r byggt f r att till ta snarare n kontrollera och best mma Exempelvis finns det inte inbyggda tekniska mekanismer i Internet f r att till exempel m jligg ra statlig vervakning eller kontroll av material som finns tillg ngligt och d ligger det mer i statens intresse att ha kontrollerade telekommunikationstj nster s som kabel TV mobiltelefoni och liknande l sningar d r man inte helt enkelt kan l gga p ett extra lager f r att uppn kryptering anonymitet eller tillg ng till andra tj nster I texten anv nder jag perspektiven tillsammans med teknologi marknader och byr krati f r att f nga upp dynamiken och str mningarna i Internet ekologin och j mf r med tekniska samh llsf r ndringar som exempelvis j rnv gsn t postverk och finansiella marknader Jag konstaterar att Internet har varit styrt av teknologiskt baserade v rderingar till skillnad fr n de andra exemplen som i huvudsak har utformats av dynamiken mellan byr krati och marknad I denna m n f rel r jag att teknologi kan anv ndas som str mning och motperspektiv till den klassiska uppst llingen med byr krati och marknad f r att beskriva fenomen i digitaliseringens tids lder Avhandlingen s tter ven p g ende trender i ett bredare perspektiv mot b de organisation och teknik och trycker p vikten av att f rst delarna var f r sig och tillsammans f r att p ett rikare s tt m la upp helheten The modern society is to a large extent Internet dependent Today we rely on the Internet to handle communication for smart doors self scanning convenience stores connected cars production robots telephones and ERP systems The purpose of this thesis is to unbundle the Internet its technology its coordination and practical and theoretical consequences Earlier research has in telecommunications focused on the Internet as one of many potential telecommunications services such as cellphones or cable TV and the management and information systems field has by and large treated the Internet as black boxable infrastructure This thesis explains the Internet from the combined perspectives of technology and coordination This text contains three empirical studies The first is focused on conceptualizing and discussing the Internet in a meaningful way using both technology and coordination frameworks I unceremoniously conclude that the Internet is both a technological and a coordination phenomenon and neither of these aspects can be ignored The Internet is technological in that it concerns digital packet switched digital communication as opposed to circuit switched or purely analog communications The technological dimension of the Internet is similar in its constituency to classical telecommunications networks and has best effort mechanisms for packet delivery In the other dimension coordination the Internet is an explicit bottom up phenomenon minimally coordinated or governed by other ideals than classical telecommunications networks and systems At its core this least necessary coordination concerns technical unique identifiers necessary for inter network communication in practice today manifested as naming with the DNS protocol suite and numbering with the BGP protocol suite Both dimensions follow similar design characteristics the design of the technical Internet is similar to the design of the coordination of the Internet These design principles which are well aligned with

software design principles is the cause of the Internet's layered design separation of concerns in practice and minimal view of coordination the least coordinated Internet In general terms it is fruitful to view the Internet and involved actors as an ecology rather than one organization or entity in need of governance or control The second study looks at the social resilience of the Internet That is is it possible through social means to change what the Internet is or can be viewed as I use social resilience as a counterpart to technical resilience i.e. resilience to technical interference In essence the bottom up and separations of concerns design of the coordination aspect of the Internet minimizes possible influence of actors intent on mission disruption I also practically show that even a take over of the central councils have little effect the constituency of the Internet since these councils are not invested with formal powers of enforcement This thesis suggests that the cost of switching from ICANN and IETF to another set of organizations is quite low due to the nature of the coordination of the Internet compared to for example switching all equipment to IPv6 capable equipment However the current political situation is a threat to the current Internet regime since an international and rule based world order is no longer on all states agendas The final empirical study focus on the practical and theoretical implications of the Internet on the case of net neutrality The primary contribution is that de facto and de jure net neutrality differ in practice and as such de facto net neutrality deserves more attention Also I suggest that any regulation either for or against net neutrality is problematic since such regulation would interfere with the inherent coordination mechanisms of the Internet As such regulation should focus on providing the necessary markets for Internet function given the coordination and design of the Internet As a net neutrality example net neutral Internet access options should exist as part of a natural service offering if wanted by customers not due to direct regulation Throughout the thesis I identify two colliding world orders both in terms of digital communication networks and terms of organizing society in general the rule based and coordinating order with its champions and the integrated or sovereign order with its champions In practical terms the Internet can be considered a want in the former the distributed perspective but not the latter the integrative perspective since the Internet lacks inherent technical controls for surveillance and content control which are necessary in a world order where borders are important Regardless of if that importance stems from state oversight or intellectual property rights legislation I use these perspectives together with technology markets and bureaucracy to catch the dynamics of the Internet ecology I then compare these dynamics with other technological and societal phenomena such as railway networks postal services and financial markets And conclude that the Internet as conceptualized in this thesis can best be explained by technological values in opposite to the other examples which can best be explained by the dynamics of markets and bureaucracies without any real influence of the values of technology As such I suggest that the classical frame of markets and bureaucracy can fruitfully be expanded with technology to better explain the Internet and similar digitization phenomena This thesis puts current trends in a broader perspective based on technology and organization where the two perspectives together better can draw the full picture in a rich fashion
