Recent Developments In Alcoholism Vol 7 Treatment Research:

Recent Developments in Alcoholism Marc Galanter, 2013-11-22 From the President of the Research Society on Alcoholism In recent years increasingly convincing evidence in support of a biobehavioral conceptual model of the etiology of alcoholism has emerged In this model the disorder is perceived as arising from the interaction of genetic/biological vulnerability and psychosocial risk Drinking or alcohol seeking is a metric trait Alcoholism which is a state of abnormally intense alcohol seeking behavior that over time leads to the alcohol dependence syndrome lies at the extreme high end of this quantitative measure Metric traits are influenced by multiple genes the extent of genetic loading of biological risk for alcoholism would be different in different individuals Added to this kind of variability is the wide range of options for exposure to the psychosocial risk factors of heavy drinking provided by modern society Further environmental provocation also changes when life events change It is not surprising therefore from the combination of the kinds of genetic and environmental variability described above that there is a wide array of patterns of expression of the disorder alcoholism referred to by some as alcoholisms In the search for understanding of underlying mechanisms and rational bases for potential therapy it is important to focus our attention on the final common pathway of this disorder alcohol seeking behavior This series ever since its beginning in 1983 has been sensitive to the complexities of the interaction between biological and psychosocial risk factors in alcoholism

Alcohol Abuse Treatment Ronald R. Watson, 2012-12-06 A major national goal is to improve the health of the populace while advancing our opportunities to pursue happiness Simultaneously there are both increasing health costs and increasing demands that more be accomplished with less financial support The number of deaths attributable to the consumption of alcohol in the US is about 100 000 per year and the annual cost of this addiction is over 100 billion Improved treatment methods can both reduce these costs and improve health by preventing the continued exposure of abusers to the toxic effects of alcohol This third volume of Drug and Alcohol Abuse Reviews focuses on the strategies currently thought best for the treatment of alcohol and tobacco abuse A variety of approaches to treating alcohol abuse employ those psychosocial factors that are known to influence alcohol use in youth and adults Pharmacotherapy has also been evaluated at the National Institute of Alcohol Abuse and Alcoholism by leaders in alcohol treatment research One key review investigates forming a developmental framework for the treatment of adolescent alcohol abusers a major challenge Although the main emphasis is

on the treatment of alcoholism a major cofactor for many drug users is nicotine tobacco addiction whose treatment is also reviewed And the roles of learning and outpatient services are shown to affect treatment significantly Thus the problems confronted and solutions used in alcohol abuse treatment have here been analyzed in concise reviews that provide evidence for today s best hypotheses and conclusions

Alcoholics Anonymous in Iceland Hildigunnur Ólafsdóttir, 2000 A historical and comparative analysis of the Icelandic AA movement which seeks to explain its particular and widespread success in Iceland despite formidable obstacles and paradoxical conditions. Not only is anonymity one of AA's basic organizational principles impossible in a society as small as Iceland, but the country's strong alcoholism treatment system has required a rethinking of AA's role: a move from being a central dynamic force in getting sober to an interactive supporting force in staying sober. Among the topics discussed in this book are the history, structure, and transformation of the movement in Iceland and its relations and interactions with other groups, treatment programs, and society as a whole.
