Recent Advances in Parsing Technology H. Bunt,Masaru Tomita,1996-08-31 In Marcus 1980 deterministic parsers were introduced These are parsers which satisfy the conditions of Marcus s determinism hypothesis i e they are strongly deterministic in the sense that they do not simulate non determinism in any way In later work Marcus et al 1983 these parsers were modified to construct descriptions of trees rather than the trees them selves The resulting D theory parsers by working with these descriptions are capable of capturing a certain amount of ambiguity in the structures they build In this context it is not clear what it means for a parser to meet the conditions of the determinism hypothesis The object of this work is to clarify this and other issues pertaining to D theory parsers and to provide a framework within which these issues can be examined formally Thus we have a very narrow scope We make no ar guments about the linguistic issues D theory parsers are meant to address their relation to other parsing formalisms or the notion of determinism in general Rather we focus on issues internal to D theory parsers themselves Recent Advances In Information Science And Technology Nikos E Mastorakis,1998-10-12 Recent Advances in Information Science and Technology brings you a balanced state of the art presentation of the latest concepts methods algorithms techniques procedures and applications of the fascinating field of Computer Science and Engineering Written by eminent leading international experts the contributors provide up to date aspects of topics discussed and present fresh original insights into their own experience with Information Science and Technology This rich anthology of papers which compose this volume contains the latest developments and reflects the experience of many eminent researchers working in different environments universities research centers and industry The book is composed of five parts Software Engineering in which new trends and recent scientific results in software engineering data structures algorithms knowledge based systems VLSI design computer languages and industrial computer applications are presented Signal Processing in which modern topics in signal processing identification recognition speech processing and detection are included Multi Dimensional m D Systems Theory and Applications which contains new research results in m D systems theory and impressive applications of multidimensional systems mainly in signal processing Communication Systems containing modern topics of communication as Digital systems of communication computer networks theory ATM networks optical networks hybrid fibber coaxial networks Internet etc Modern Numerical Techniques and Related Topics which covers some aspects of the modern computation science and technology **Recent Advances in Natural Language Processing V** Nicolas Nicolov,Galia Angelova,Ruslan Mitkov,2009-10-22 This volume brings together revised versions of a selection of papers presented at the Sixth International Conference on Recent Advances in Natural Language Processing RANLP held in Borovets Bulgaria 27 29 September 2007 These papers cover a wide variety of Natural Language Processing NLP topics ontologies named entity extraction translation and transliteration morphology derivational and inflectional part of speech tagging parsing incremental processing dependency parsing semantic role labeling word

often translatable into each other The book closes with a chapter showing how properties common to all languages or to certain classes of languages can be captured   Conceptual Structures: Leveraging Semantic Technologies Sebastian Rudolph,Frithjof Dau,Sergei O. Kuznetsov,2009-07-25 This book constitutes the refereed proceedings of the 17th International Conference on Conceptual Structures ICCS 2009 which took place in Moscow Russia on July 26 31 2009 The 18 papers presented together with 5 invited contributions were carefully reviewed and selected from approximately 50 submissions Originally centered around research on knowledge representation and reasoning with conceptual graphs over the years ICCS has broadened its scope to include innovations from a wider range of theories and related practices among them other forms of graph based formalisms like RDF or existential graphs formal concept analysis semantic Web technologies ontologies concept mapping and more   *Head-Driven Phrase Structure Grammar* Stefan Müller,Anne Abeillé,Robert D. Scott,2003-08-02 This book constitutes the refereed proceedings of the 10th International Conference on Artificial Intelligence Methodology Systems and Appliations AIMSA 2002 held in Varna Bulgaria in September 2002 The 26 revised full papers presented together with 2 invited papers were carefully reviewed and selected for inclusion in this book The papers address a broad spectrum of topics in AI including natural language processing computational learning Machine learning AI planning heuristics neural information processing adaptive systems computational linguistics multi agent systems AI logic knowledge management and information retrieval   *The Integration of Phonetic Knowledge in Speech Technology* William J. Barry,William John Barry,Willem A. van Dommelen,2006-03-31 Continued progress in Speech Technology in the face of ever increasing demands on the performance levels of applications is

a challenge to the whole speech and language science community Robust recognition and understanding of spontaneous speech in varied environments good comprehensibility and naturalness of expressive speech synthesis are goals that cannot be achieved without a change of paradigm This book argues for interdisciplinary communication and cooperation in problem solving in general and discusses the interaction between speech and language engineering and phonetics in particular With a number of reports on innovative speech technology research as well as more theoretical discussions it addresses the practical scientific and sometimes the philosophical problems that stand in the way of cross disciplinary collaboration and illuminates some of the many possible ways forward Audience Researchers and professionals in speech technology and computational linguists   <u>Framework and Resources for Natural Language Parser Evaluation</u> Tuomo Kakkonen,2007
