Peptide Hormone Biosynthesis – From Nucleus to Secretory Granule

The biosynthesis of peptide hormones is now recognized to be a highly ordered series of events. These biosynthetic events can frequently be localized to a particular subcellular organelle (Fig. 1). Each organelle will be discussed in turn, to emphasize the sequential nature of the maturation process. There will be frequent references to the synthesis and processing of the corticotropin/endorphin precursor within the pituitary. This multihormone precursor is often referred to as pro-opiomelanocortin (POMC). POMC is an interesting model to study, since many post-translational modifications are manifest within its maturation products. More intriguing is the fact that processing of this multihormone precursor is tissue specific. In the pars distalis or anterior lobe of the pituitary, ACTH, β -lipotropin (β -LPH), and an N-terminal or 16 K fragment are the major biosynthetic products. In the pars intermedia or intermediate lobe processing is more complete, and α -melanotropin (α -MSH), corticotropin-like intermediate lobe peptide (CLIP), γ -LPH, various forms of acetylated endorphin, γ -MSH, and a shortened N-terminal (16 K₁₋₄₉) fragment are the major products (Fig. 2). More is known of this system than of many others, primarily because pituitary tissue is relatively easy to maintain in culture and lends itself well to classical pulse/chase biosynthetic experiments. Also the AtT-20 mouse pituitary tumour cell line has been an extremely useful and accurate model for anterior pituitary processing (for extensive reviews on this subject see Eipper and Mains 1980; Chrétien and Seidah 1981).

The study of peptide hormone biosynthesis, whether at the transcriptional level or at the level of post-translational processing, is progressing rapidly on several fronts. It will not be possible to discuss all aspects of this multistep process in detail. Instead, some of the recent developments which are of particular interest in our own laboratory are discussed.

The Nucleus

In eukaryotic organisms gene transcription is a nuclear event. The resulting RNA transcript must be transported to the cytoplasm for translation to take place. Recently it has been shown that conditions that acutely alter ACTH release from the anterior pituitary also have longer term effects upon the levels of POMC mRNA levels in the cytoplasm. For

Parathyroid Hormone Shaul G. Massry,Takuo Fujita,2012-12-06 Shaul G Massry Division of Nephrology The University of Southern California School of Medicine Los Angeles California In the last two decades evidence has accumulated indicating that parathyroid hormone may exert a multitude of effects on many cells and a variety of organs beyond its classical targets the kidney and the bone These efforts have been spearheaded by nephrologists The interest of this group of clinicians scientists stems from the fact that patients with renal failure have secondary hyperparathyroidism and markedly elevated blood levels of PTH 1 2 If this hormone does act on various organs it becomes plausible that excess blood levels of PTH may be harmful in these patients Indeed in an Editorial published in 1977 Massry suggested that the elevated blood levels of PTH in patients with renal failure may exert deleterious effects on many systems and as such may participate in the genesis of many of the manifestations of the uremic syndrome 3 Thus the essence of the Massry hypothesis is the notion that PTH may act as a major uremic toxin The search for uremic toxins did not yield successful results In the last three decades many compounds have been implicated as uremic toxins However a cause and effect relationship between these compounds and the manifestations of the uremic syndrome has not been established in most cases *Major Methods of Peptide Bond Formation* Erhard Gross,Johannes Meienhofer,2014-05-10 The Peptides Analysis Synthesis Biology Volume 1 Major Methods of Peptide Bond Formation provides comprehensive and critical reviews of important developments in three major areas of peptide research analysis synthesis and biology This book discusses the nature of the peptide bond coupling between amino
