Linear Planning to Reduce Regional Inequality Rossella Moscarelli, 2023-04-24 This book explores the advantages of a linear model of planning in reducing regional inequalities. Linear planning, commonly discussed in the past as a method which plans the development of the city, is completely redefined here in the form of a design approach inspired by projects shaped by linear routes such as cycle or walking paths. Such concept is applied to the urgent topic of territorial marginality which specifically neglects rural and mountainous areas and recently is coped by European and National policies. The analysis of these policies demonstrates the necessity of alternative strategies equipped to deal with both the internal and external causes that determine the critical conditions in these fragile environments. By implementing the concept of linear planning in these contexts, this book proposes to enlarge the perspective of traditional policies, contrasting the regional inequalities that usually determine the design of projects just within the boundaries of the marginal areas. Cycle and walking paths are experimental cases of linear planning as they have not been influenced or formed by political boundaries and therefore are able to equally involve both the central and marginal zones. This book presents a review of current issues such as regional inequalities with attention to their related policies as well as an analysis of the concept of linear planning as seen through the study of one of the most famous cases of a walking path, the Way of St James in Spain.

Territorial Division for Public Action Antoine Laporte, Antonine Ribardi re, 2025-05-13 The reader may be amazed when they are faced with the sheer number of territorial divisions associated with public action and full of questions: What justifies this diversity? What are the problems that arise from these divisions? Why don't the limits of public action simply follow administrative and political subdivisions? Territorial Division for Public Action focuses on the situation in France, proposing three different approaches. First, we consider the functions that are associated with these territorial divisions: equitable distribution of resources across the territory, administration and the management of public services. However, they are also a tool for maintaining power. Lastly, we consider the effects these divisions have on the implementation of public action and on socio-spatial structures. These divisions reflect political projects which embody the issues as much as the partition design itself does. The recent reform of territorial regions alongside a gradual imposition of intercommunal links in France has given rise to political debates at both local and national levels.

The Constitutional Framework for Enhanced Cooperation in EU Law Robert B ttner, 2021-02-15 Enhanced Cooperation allows a group of Member States to use the EU's competences and institutions to pursue a project within the Union's framework that is binding only on the participating States while remaining an EU act. Introduced by the Amsterdam Treaty, this tool of flexible integration was not used until 2010. In *The Constitutional Framework for Enhanced Cooperation in EU Law*, Robert B ttner analyses the primary law framework of this flexibility tool. On the basis of a profound literature review and against the

background of recent Member State practice the author redefines the constitutional rules of Enhanced Cooperation He draws conclusions on this tool s legal limits but also its potential for European integration **Political geography, geopolitics and territorial management: Brazilian perspectives** Gutemberg de Vilhena Silva, 2023-04-29 This book aims to contribute to debates in the fields of political geography geopolitics and territorial management from the point of view of authors who work in Brazilian universities in the five regions of the country
