Regenerative Medicine II Clinical And Preclinical Applications:

Regenerative Medicine II Ioannis V. Yannas, 2005-03-29 Organ regeneration once unknown in adult mammals is at the threshold of maturity as a clinical method for restoration of organ function in humans Several laboratories around the world are engaged in the development of new tools such as stem cells and biologically active scaffolds Others are taking fresh looks at well known clinical problems of replacement of a large variety of organs Bone skin the spinal cord peripheral nerves articular cartilage the conjunctiva heart valves and urologic organs Still other investigators are working out the mechanistic pathways of regeneration and the theoretical implications of growing back organs in an adult The time has come to present a collection of these efforts from leading practitioners in the field of organ regeneration Regenerative Medicine: Clinical and preclinical applications, 2005 Tissue Engineering I Kyongbum Lee, David Kaplan, 2006-10-16 This book covers trends in modern biotechnology All aspects of this interdisciplinary technology where knowledge methods and expertise are required from Chemistry Biochemistry Microbiology Genetics Chemical Engineering and Computer Science are treated More information as well as the electronic version available at springeronline com Marine Biotechnology II Yves Le Gal, Roland Ulber, 2005-09-29 The series Advances in Biochemical Engineering Biotechnology presents critical reviews of the present and future trends in polymer and biopolymer science including chemistry physical chemistry physics and material science It is addressed to all scientists at universities and in industry who wish to keep abreast of advances in the topics covered Title page verso Cell Culture Engineering Wei-Shu Hu, 2006-08-16 Since the introduction of recombinant human growth hormone and insulin a quarter century ago protein therapeutics has greatly broadened the horizon of health care Many patients suffering with life threatening diseases or chronic dysfunctions which were medically untreatable not long ago can attest to the wonder these drugs have achieved Although the first generation of protein therapeutics was produced in recombinant Escherichia coli most recent products use mammalian cells as production hosts Not long after the first production of recombinant proteins in E coli it was realized that the complex tasks of most post translational modifications on proteins could only be efficiently carried out in mammalian cells In the 1990s we witnessed a rapid expansion of mammalian cell derived protein therapeutics chiefly antibodies In fact it has been nearly a decade since the market value of mammalian cell derived protein therapeutics surpassed that of those produced from E coli A common characteristic of recent antibody products is the relatively large dose required for effective therapy demanding larger quantities for the treatment of a given disease This coupled with the broadening repertoire of protein drugs has rapidly expanded the quantity needed for clinical applications The increasing demand for protein therapeutics has not been met exclusively by construction of new manufacturing plants and increasing total volume capacity More importantly the productivity of cell culture processes has been driven upward by an order of magnitude in the past decade **Gene Therapy and Gene Delivery Systems** David V.
