Coastal Ecosystems of the Tropics - Adaptive Management Velmurugan Ayyam, Swarnam Palanivel, Sivaperuman Chandrakasan, 2019-10-11. The coastal areas of the tropics are rich in biodiversity, natural resources, and place of intensive developmental activities as it provides livelihood to millions of people. At the same time, evidences suggest that several unique coastal ecosystems viz. mangroves, wetlands, salt marshes, corals, estuaries, sand dunes, and agro ecosystem are vulnerable to natural disasters and events associated with global climate change. In recent times, degradation of land, water, and genetic erosion, besides threat to native flora and fauna, have been increasing due to unsustainable developmental activities. Therefore, a paradigm shift in deriving livelihood through conventional methods, developmental strategies, conservation practices are required for balanced and sustainable growth of the coastal areas. This publication strives to cover the status of different natural resources of the coastal region, various aspects of degradation, process, production need, and restorative methods, besides new technological options and its socio-economic implications with case examples. Special focus is given to bring out the scope and potential of mangrove-based farming, integrated and organic farming, and its value addition, besides the role of coastal vegetations as bioshield in protecting these regions from sea erosion, cyclones, and tsunami. As the tropical coastal areas are vulnerable to climate change events, this book also covers the recent weather pattern impacts of climate change and climate resilient technologies, besides intuitional linkages and policy framework aimed at balancing development and environmental concerns.

Using the Agricultural, Environmental, and Food Literature Barbara S. Hutchinson, Antoinette Paris-Greider, 2002-07-17. This text discusses a wide range of print and electronic media to locate hard-to-find documents, navigate poorly indexed subjects, and investigate specific research topics and subcategories. It includes a chapter on grey and extension literature covering technical reports and international issues.

The Molecular and Physiological Basis of Nutrient Use Efficiency in Crops Malcolm J. Hawkesford,Peter Barraclough,2011-09-21 Efforts to increase efficient nutrient use by crops are of growing importance as the global demand for food fibre and fuel increases and competition for resources intensifies The Molecular and Physiological Basis of Nutrient Use Efficiency in Crops provides both a timely summary of the latest advances in the field as well as anticipating directions for future research The Molecular and Physiological Basis of Nutrient Use Efficiency in Crops bridges the gap between agronomic practice and molecular biology by linking underpinning molecular mechanisms to the physiological and agronomic aspects of crop yield These chapters provide an understanding of molecular and physiological mechanisms that will allow researchers to continue to target and improve complex traits for crop improvement Written by leading international researchers The Molecular and Physiological Basis of Nutrient Use Efficiency in Crops will be an essential resource for the crop science community for years to come Special Features coalesces current knowledge in the areas of efficient acquisition and utilization of nutrients by crop plants with emphasis on modern developments addresses future directions in crop nutrition in the light of changing climate patterns including temperature

and water availability bridges the gap between traditional agronomy and molecular biology with focus on underpinning molecular mechanisms and their effects on crop yield includes contributions from a leading team of global experts in both research and practical settings

Ecological Intensification of Natural Resources for Sustainable Agriculture Manoj Kumar Jhariya, Ram Swaroop Meena, Arnab Banerjee, 2021-03-07

Ecological intensification involves using natural resources such as land water soil nutrients and other biotic and abiotic variables in a sustainable way to achieve high performance and efficiency in agricultural yield with minimal damage to the agroecosystems With increasing food demand there is high pressure on agricultural systems The concept of ecological intensification presents the mechanisms of ensuring high agricultural productivity by restoration the soil health and landscape ecosystem services The approach involves the replacement of anthropogenic inputs with eco friendly and sustainable alternates Effective ecological intensification requires an understanding of ecosystems services ecosystem s components and flow of resources in the agroecosystems Also awareness of land use patterns socio economic factors and needs of the farmer community plays a crucial role It is therefore essential to understand the interaction of ecosystem constituents within the extensive agricultural landscape The editors critically examined the status of ecological stress in agroecosystems and address the issue of ecological intensification for natural resources management Drawing upon research and examples from around the world the book is offering an up to date account and insight into the approaches that can be put in practice for poly cropping systems and landscape scale management to increase the stability of agricultural production systems to achieve Ecological resilience It further discusses the role of farmer communities and the importance of their awareness about the issues This book will be of interest to teachers researchers climate change scientists capacity builders and policymakers Also the book serves as additional reading material for undergraduate and graduate students of agriculture forestry ecology agronomy soil science and environmental sciences National and international agricultural scientists policymakers will also find this to be a useful read for green future
