Respiratory Support:

Respiratory Support Strategies in the Prevention and Treatment of Bronchopulmonary Dysplasia Huayan Zhang, Robin McKinney, 2023-07-26 Infant chronic lung disease CLD or bronchopulmonary dysplasia BPD one of the most common complications of prematurity carries consequences of high mortality and morbidity Lengthy hospitalizations frequent readmissions chronic cardiopulmonary impairment poor growth and long term neurodevelopmental impairment are common in these patients As a result it is a disease with high social economic impact both to the health care system and society Over the past few decades advances in neonatal intensive care have led to improved survival of extremely premature infants world wide especially in low and middle income countries LMICs This increased survival has also led to a larger number of infants with extremely immature lungs that are prone to abnormal lung development and lung injury Consequently the incidence of BPD has not decreased Although respiratory support is a mainstay therapy for premature infants with acute or chronic respiratory insufficiency there is currently a lack of strong evidence based respiratory support strategies both in the prevention of BPD and treatment of infants with established BPD Over the years there has been a series of advancements in the respiratory management of premature infants including but not limited to less invasive methods of pulmonary surfactant delivery multiple modalities of non invasive respiratory support neonatal specific ventilators with better synchronization and monitoring capabilities use of permissive hypercapnia to minimize the level of ventilation support and international agreement on the oxygen saturation target However there have been controversies in the safety and efficacy of some of these treatments and much more needs to be learned in how to best apply some of these therapies especially in infants with evolving BPD and established BPD as well as in resource limited settings This Research Topic will focus on respiratory support strategies in the prevention and treatment of BPD We welcome both experimental and clinical research articles exploring the impacts of respiratory support on pulmonary mechanics lung injury lung growth and overall health in premature infants both during their early postnatal days and after they are diagnosed with BPD This article collection will explore but is not limited to the following thematic areas 1 Delivery room respiratory management in the prevention of BPD 2 Use of non invasive respiratory support in premature infants with respiratory distress syndrome RDS evolving BPD or established BPD 3 Mechanical ventilation strategies in intubated premature infants with RDS evolving BPD or established BPD 4 Neurally Adjusted Ventilatory Assist NAVA use in the prevention or treatment of BPD 5 Cardio pulmonary interaction during respiratory support in preterm infants 6 Effects of different respiratory support modalities on pulmonary mechanics lung injury and BPD associated pulmonary hypertension 7 Impact of respiratory support on the growth and development of premature infants 8 Nursing care of premature infants on invasive or non invasive respiratory support 9 Tracheostomy and long term ventilation for infants with BPD 10 Post discharge respiratory support management and respiratory follow up for infants with BPD 11 Impact of infection bacterial or viral including but not limited to gram negative organisms RSV influenza

COVID 19 and others on respiratory function in infants with BPD 12 Adjunctive therapies in addition to respiratory support in BPD prevention or in the treatment of BPD 13 Utility of bedside imaging e g lung ultrasound bronchoscopy electric impedance tomography etc in the selection and adjustment of respiratory support 14 Respiratory support related quality improvement in the prevention or management of BPD 15 Family and staff education to care for premature infants with respiratory support

Mechanical Circulatory and Respiratory Support Shaun D. Gregory, Andrew F. Stephens, Silver Heinsar, Jutta Arens, John F. Fraser, 2024-11-02 Mechanical Circulatory and Respiratory Support Second Edition continues to provide a comprehensive overview of the past present and future development of mechanical circulatory and respiratory support devices This new edition provides an update on the field while also introducing new elements within the field such as ex vivo perfusion devices for HFpEF design for manufacture oxygenator design and more content on route to market Chapters from over 60 internationally renowned experts focuses on the entire life cycle of mechanical circulatory and respiratory support from the descent into heart and lung failure alternative medical management device options device design implantation techniques complications and medical management of the supported patient patient device interactions cost effectiveness route to market and a view to the future This second edition is a useful resource for biomedical engineers and clinicians who are designing new mechanical circulatory or respiratory support devices while also providing a comprehensive guide of the entire field for those who are already familiar with some areas and want to learn more Reviews of the most cutting edge research are provided throughout each chapter along with guides on how to design new devices and which areas require specific focus for future research and development Presents an engineering pathway to develop the most advanced medical devices Features a clinical summary of how to select the right patients and treat them optimally while supported with these devices Includes a detailed path to market for those developing new devices in this field

Respiratory Care for the Modern Practitioner Pasquale De Marco, 2025-07-07 Respiratory Care for the Modern Practitioner is an indispensable resource for respiratory care practitioners nurses physicians and anyone involved in the care of patients with respiratory conditions This comprehensive guide provides a deep understanding of the respiratory system and its disorders empowering healthcare professionals to deliver exceptional patient outcomes With its thorough coverage of respiratory physiology assessment techniques therapeutic interventions and specialized care considerations this book equips healthcare providers with the knowledge and skills they need to effectively manage a wide range of respiratory conditions The book also emphasizes the importance of patient education and support providing practical guidance on educating patients and their families about their respiratory conditions and their management This book is not only a valuable resource for seasoned professionals but also a foundational text for students embarking on their journey in respiratory care Its clear explanations engaging writing style and up to date content make it an essential companion for anyone seeking to advance their knowledge and skills in this critical field Healthcare professionals will appreciate the book's in depth coverage of

Pediatric and Neonatal Mechanical Ventilation
Peter C. Rimensberger, 2014-11-12 Written by outstanding authorities from all over the world this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children infants and newborns In the early chapters developmental issues concerning the respiratory system are considered physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed Thereafter the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained with the emphasis on a practical step by step approach Respiratory monitoring and safety issues in ventilated patients are considered in detail and many other topics of interest to the bedside clinician are covered including the ethics of withdrawal of respiratory support and educational issues Throughout the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists

Non-Invasive Ventilation, An Issue of Clinics in

Perinatology Bradley Yoder, Haresh Kirpalani, 2016-11-15 Preterm birth interrupts the normal developmental progression of most organs particularly when birth occurs at the lowest level of viability An immediate task is to successfully transition to a post natal life without a placental circulation To do this demands careful management of the cardiorespiratory systems To best help the fragile preterm infant at this demanding time care givers must remember two most pressing goals These are first to maintain adequacy of gas exchange and delivery while simultaneously minimizing any secondary injury to the fragile preterm lung However after these immediate priorities in the delivery room the longer term effects of an immature lung development and its associated problems come to the forefront These problems include the inflammation of perinatal infection oxygen and invasive mechanical ventilation Both the immaturity itself and secondary lung injury and its inflammation collectively will often lead to the condition termed bronchopulmonary dysplasia BPD Although many of these infants may eventually be discharged to home without a need for oxygen supplementation or pulmonary medications the long term impact of interrupted lung development and secondary lung injury remain serious concerns It is now well recognized that mechanical ventilation is pivotal to developing secondary lung injury and BPD Consequently a great deal of time and effort has been put into the development and application of non invasive ventilator NIV approaches to supporting respiratory function in neonates Since the landmark publication by Gregory and colleagues in 1967 nasal continuous positive airway pressure nCPAP has been the most commonly applied approach to NIV This approach has been supported by the recent generation of randomized controlled trials However cumulatively these trials have shown only a small reduction in rates of BPD Outside of the trial data despite the wider application of nCPAP rates of BPD remain relatively unchanged over recent years This has led to investigations of other NIV approaches including nasal ventilation and high flow nasal cannula therapy

Not only have available modes increased but so have the interfaces through which these modes may be applied. In the issue of *Clinic in Perinatology* readers will find an up to date review of non invasive approaches to supporting preterm respiratory function. This draws on the expertise of leading investigators in the field. This issue reviews the physiologic mechanisms by which the various approaches to NIV may support respiratory function, the evidence base supporting different NIV approaches and adjunctive aspects of NIV therapy including their use during neonatal transport and the application of other supportive therapies such as inhaled NO.

Respiratory Support: Clinical Applications and the Novel Future Jun Duan, Bing Dai, Antonio M. Esquinas, 2024-03-14

Respiratory support is a series of significant techniques used widely in clinical which saves a great number of patients with impaired pulmonary function and respiratory failure caused by pneumonia, sepsis, trauma and acute exacerbation of chronic obstructive pulmonary disease especially in recent years of Covid 19. It could improve oxygenation, reduce respiratory rate and maintain normal ventilation. These techniques include oxygen therapy, high flow nasal cannula, noninvasive ventilation, mechanical ventilation and extracorporeal membrane oxygenation et al. Respiratory support has been improved increasingly these 20 years. Summarizing experience from past cases and keeping up with the latest technology is crucial to improve patient management and prognosis.

The ESC Textbook of Cardiovascular Imaging Jose Luis Zamorano, Jeroen Bax, Juhani Knuuti, Udo Sechtem, Patrizio Lancellotti, Luigi Badano, 2015-03-26

A definitive resource. The ESC Textbook of Cardiovascular Imaging second edition provides extensive coverage of all cardiovascular imaging modalities. Produced in collaboration with the European Association of Cardiovascular Imaging with contributions from specialists across the globe and edited by a distinguished team of experts, it is a state of the art clinically orientated imaging reference. Now fully revised and updated with the latest imaging techniques and technology and covering even more conditions than before, it not only discusses the principles of individual modalities but also clearly demonstrates the added value each technique can bring to the treatment of all cardiac diseases. Richly illustrated with colour figures, images and tables and using a wealth of newly available evidence to link theory to practice, it demonstrates how these techniques can be used in the diagnosis of a range of cardiovascular diseases. Learning how to apply them in practice is made easy with free access to videos and imaging loops online along with the full text so that it is always available even when on the move. Impressive in scope, The ESC Textbook of Cardiovascular Imaging contains information on cutting edge technical developments in echocardiography, CT, CMR and hybrid imaging and well imaging's current role in cardiac interventions such as identifying cardiac structures helping to guide procedures and exclude possible complications. The application of imaging modalities in conditions such as valvular and coronary heart disease, heart failure, cardiomyopathies, pericardial disease, adult congenital heart disease and aortic disease is also extensively considered. From discussion on improved imaging techniques and advances in technology to guidance and explanation of key practices and theories, this new edition of The ESC Textbook of Cardiovascular Imaging is the ideal reference guide for cardiologists and radiologists alike.
