Racial Classification and History E. Nathaniel Gates,1997 Explores the concept of race The term race which originally denoted genealogical or class identity has in the comparatively brief span of 300 years taken on an entirely new meaning In the wake of the Enlightenment it came to be applied to social groups This ideological transformation coupled with a dogmatic insistence that the groups so designated were natural and not socially created gave birth to the modern notion of races as genetically distinct entities The results of this view were the encoding of race and racial hierarchies in law literature and culture How racial categories facilitate social control The articles in the series demonstrate that the classification of humans according to selected physical characteristics was an arbitrary decision that was not based on valid scientific method They also examine the impact of colonialism on the propagation of the concept and note that racial categorization is a powerful social force that is often used to promote the interests of dominant social groups Finally the collection surveys how laws based on race have been enacted around the world to deny power to minority groups A multidisciplinary resource This collection of outstanding articles brings multiple perspectives to bear on race theory and draws on a wider range of

periodicals than even the largest library usually holds. Even if all the articles were available on campus, chances are that a student would have to track them down in several libraries and microfilm collections. Providing, of course, that no journals were reserved for graduate students out for binding or simply missing. This convenient set saves students substantial time and effort by making available all the key articles in one reliable source. Authoritative commentary: The series editor has put together a balanced selection of the most significant works accompanied by expert commentary. A general introduction gives important background information and outlines fundamental issues, current scholarship, and scholarly controversies. Introductions to individual volumes put the articles in context and draw attention to germinal ideas and major shifts in the field. After reading the material, even a beginning student will have an excellent grasp of the basics of the subject. Also available individually by volume: 1 *The Concept of Race in Natural and Social Science* 0 8153 2600 9 288 pages; 2 *Cultural and Literary Critiques of the Concepts of Race* 0 8153 2601 7 3; 3 *Racial Classification and History* 0 8153 2602 5 4; 4 *The Judicial Isolation of the Racially Oppressed* 0 8153 2599 1. *Redefining Urban and Suburban America* Bruce Katz, Robert E. Lang, 2004-05-13. The early returns from Census 2000 data show that the United States continued to undergo dynamic changes in the 1990s with cities and suburbs providing the locus of most of the volatility. Metropolitan areas are growing more diverse, especially with the influx of new immigrants; the population is aging and the make up of households is shifting. Singles and empty nesters now surpass families with children in many suburbs. The contributors to this book review data on population, race, and ethnicity and household composition provided by the Census's short form and attempt to respond to three simple queries: Are cities coming back? Are all suburbs growing? Are cities and suburbs becoming more alike? Regional trends muddy the picture. Communities in the Northeast and Midwest are generally growing slowly, while those in the South and West are experiencing explosive growth. Warm, dry places grew; cold, wet places declined, note two authors. Some cities are robust, others are distressed. Some suburbs are bedroom communities, others are hot employment centers, while still others are deteriorating. And while some cities' cores may have been intensely developed, including those in the Northeast and Midwest, and seen population increases, the areas surrounding the cores may have declined significantly. Trends in population confirm an increasingly diverse population in both metropolitan and suburban areas with the influx of Hispanic and Asian immigrants and with majority populations of central cities for the first time being made up of minority groups. Census 2000 also reveals that the overall level of black to nonblack segregation has reached its lowest point since 1920, although high segregation remains in many areas. *Redefining Urban and Suburban America* explores these demographic trends and their complexities along with their implications for the policies and politics shaping metropolitan America. The shifts discussed here have significant influence. **Rethinking the Chicano Movement** Marc Simon Rodriguez, 2014-11-13. In the 1960s and 1970s, an energetic new social movement emerged among Mexican Americans. Fighting for civil rights and celebrating a distinct ethnic identity, the Chicano Movement had a lasting impact on the United States, from desegregation to bilingual
