twenty five years much progress has been achieved on finiteness conjectures which are the offspring of the second part of Hilbert's 16th problem. Even in its simplest case this is one of the very few problems on Hilbert's list which remains unsolved. These results are about existence and estimation of finite bounds for the number of limit cycles occurring in certain families of ODEs. The book describes this progress, the methods used: bifurcation theory, asymptotic expansions, methods of differential algebra or geometry and the specific results obtained. The finiteness conjectures on limit cycles are part of a larger picture that also includes finiteness problems in other areas of mathematics, in particular those in Diophantine geometry where remarkable results were proved during the same period of time. There is a chapter devoted to finiteness results in D. The volume can be used as an independent study text for advanced undergraduates and graduate students studying ODEs or applications of differential algebra to differential equations and Diophantine geometry. It is also a good entry point for researchers interested in these areas, in particular in limit cycles of ODEs and in finiteness problems. Contributors to the volume include Andrey Bolibrukh and Alexandru Buium. Available from the AMS by A. Buium is *Arithmetic Differential Equations* as Volume 118 in the *Mathematical Surveys and Monographs* series. **The Athenaeum**, 1855. *Catalogue of the American books in the library of the British museum at Christmas mdccclvi.
