*Reactive scattering for H- + H2 and H+ + H2 and its isotopologues* Dequan Wang, 2016-07-15 The reactive scattering for H- + H2 and H+ + H2 and its isotopologues were investigated using different methods. The studies aimed at providing insights into elementary reactions and go beyond these to more complex chemical reactions. By comparison of the reaction probabilities of H- + H2 using adiabatic and non adiabatic methods it was found that at low collision energies the reaction preferentially occurs adiabatically but at higher collision energies non adiabatic effects should be taken into account. For H- + H2 and its isotopologues we can see that at low collision energies the reaction probabilities and reaction cross section using SM PES and AY PES are very similar but different from PS PES. The reaction cross sections investigated with quasi classical trajectories are higher than those calculated with quantum wavepackets. For the collision H- + D with HD the main reaction pathways are different with the different collision energies **Barcelona 2004 - Edges of Experience: Memory and Emergence** Lyn Cowan, 2006 The stimulating program featured clinical, artistic, historical and other interests and concerns of Jungian Psychology today with wide ranging presentations and events.
