Long Summer How Climate Changed:

The Long Summer Brian M. Fagan, 2004-01-01 The Long Summer illuminates for the first time the centuries long pattern of human adaptation to the demands and challenges of an ever changing climate demands and challenges that are still with us today **BOOK JACKET** *The Long Summer* Brian Fagan, 2004-12-29 Humanity evolved in an Ice Age in which glaciers covered much of the world But starting about 15 000 years ago temperatures began to climb Civilization and all of recorded history occurred in this warm period the era known as the Holocene the long summer of the human species In *The Long Summer* Brian Fagan brings us the first detailed record of climate change during these 15 000 years of warming and shows how this climate change gave rise to civilization A thousand year chill led people in the Near East to take up the cultivation of plant foods a catastrophic flood drove settlers to inhabit Europe the drying of the Sahara forced its inhabitants to live along the banks of the Nile and increased rainfall in East Africa provoked the bubonic plague The Long Summer illuminates for the first time the centuries long pattern of human adaptation to the demands and challenges of an ever changing climate challenges that are still with us today **Climate Change and the Course of Global History** John L. Brooke, 2014-03-17 The first global study by a historian to fully integrate the earth system approach of the new climate science with the material history of humanity *A Companion to Global Environmental History* J. R. McNeill, Erin Stewart Mauldin, 2025-02-06 A COMPANION TO GLOBAL ENVIRONMENTAL HISTORY Equips both specialists and newcomers with the historical intellectual and political context for engagement with the environment Providing multiple points of entry into a dynamic fast growing field *A Companion to Global Environmental History* explores the many contours of the relationship between human societies and the natural world on which they depend Bringing together essays by an international roster of both established experts and emerging scholars this volume covers a uniquely broad range of temporal geographic thematic and contextual approaches to the practice of global environmental history Thirty three detailed chapters describe how the relationship between society and nature has changed over time examine the various drivers of change and environmental transformations survey different types of environmental thought and action around the world and more Now in its second edition the Companion is fully revised to reflect major research developments and new trajectories within the field Updated chapters that present new evidence for longstanding debates and innovative applications of environmental history are accompanied by six entirely new chapters on India China Africa early modern cities global environmental governance and European environmentalism Offering fresh insights into environmental thought culture policy and politics *A Companion to Global Environmental History* Second Edition is an ideal textbook for undergraduate and graduate students and an invaluable reference for scholars researchers and environmental historians **The Oxford Handbook of Environmental History** Andrew C. Isenberg, 2017 The Oxford Handbook of Environmental History draws on a wealth of new scholarship to offer diverse perspectives on the state of the field *The Oxford Companion to Global Change* David J. Cuff, 2008 In recent years

global change has become increasingly important in technological ecological and political spheres This companion examines the environmental events of recent times and investigates long term trends as well as broader issues of global change

Climate Change and the Health of Nations Anthony J. McMichael, Alistair Woodward, Cameron Muir, 2017 When we think climate change we think of man made global warming caused by greenhouse gas emissions But natural climate change has occurred throughout human history and populations have had to adapt to its vicissitudes Tony McMichael a renowned epidemiologist and a pioneer in the field of how human health relates to climate change is the ideal guide to this phenomenon and in his magisterial Climate Change and the Health of Nations he presents a sweeping and authoritative analysis of how human societies have been shaped by climate events

Global Climate Change Demystified James G. Speight, 2019-12-17 Tackling one of the most controversial subjects of our time one of the world's foremost environmental and petroleum engineers explores the potential causes and ramifications of global climate change For too many years climate change also referred to as global warming has been assigned predominantly to the emissions of carbon dioxide through the combustion of fossil fuels It must never be forgotten or ignored however that the Earth has been constantly changing since its formation and has gone through different eras like glaciations among others These changes need thousands of years to be made visible and are likely still continuing given the increase in the average temperature of the Earth since the pre industrial period provided that the measurements of past climatic temperatures are accurate and beyond reproach It follows that the warming trend that has occurred over the past 100 years is very likely to have some origins in natural events as well as in human activity The precise contributions of natural effects and anthropogenic effects on the climate are not known but it is accurate to conclude that many factors continue to influence climate Whether or not human activities have become a dominant force in the changing climate and are responsible for most of the warming observed is still open to question When studying the climate system of the Earth an area of common confusion is whether climate scientists agree or disagree as to whether or not climate change is happening or if it is happening whether or not humans are the primary cause There are a variety of reasons for this but a majority of scientists who study climate and publish in peer reviewed journals agree that human activity is causing the warming of the Earth The purpose of this book is to weigh all of these various data points and in a scientific and unemotional way arrive at likely conclusions regarding global climate change Whether human activity is the main driver behind our current changes in climate one thing is certain Climate change is happening and we all need to make informed rather than emotional decisions

Impact of Global Changes on Mountains Velma I. Grover, Axel Borsdorf, Jürgen Breuste, Prakash Chandra Tiwari, Flavia Witkowski Frangetto, 2014-12-19 Mountain regions encompass nearly 24 percent of the total land surface of the earth and are home to approximately 12 percent of the world's population Their ecosystems play a critical role in sustaining human life both in the highlands and the lowlands During recent years resource use in high mountain areas has changed mainly in response to the
