## **Martian Rock:**

*The Rock From Mars* Kathy Sawyer, 2006-02-14 In this riveting book acclaimed journalist Kathy Sawyer reveals the deepest mysteries of space and some of the most disturbing truths on Earth The Rock from Mars is the story of how two planets and the spheres of politics and science all collided at the end of the twentieth century It began sixteen million years ago An asteroid crashing into Mars sent fragments flying into space and eons later one was pulled by the Earth's gravity onto an icy wilderness near the southern pole There in 1984 a geologist named Roberta Score spotted it launching it on a roundabout path to fame and controversy In its new home at NASA's Johnson Space Center in Houston the rock languished on a shelf for nine years a victim of mistaken identity Then in 1993 the geochemist Donald Duck Mittlefehldt unmasked the rock as a Martian meteorite Before long specialist Chris Romanek detected signs of once living organisms on the meteorite And the obscure rock became a rock star But how did nine respected investigators come to make such startling claims about the rock that they triggered one of the most venomous scientific battles in modern memory The narrative traces the steps that led to this risky move and follows the rippling impact on the scientists' lives the future of space exploration the search for life on Mars and the struggle to understand the origins of life on Earth From the second the story broke in *Science* magazine in 1996 it spawned waves of excitement envy competitive zeal and calculation In academia in government agencies in laboratories around the world and even in the Oval Office where an inquisitive President Clinton had received the news in secret players of all kinds plotted their next moves Among them David McKay the dynamic geologist associated with the first moon landing who labored to achieve at long last a second success Bill Schopf of UCLA a researcher determined to remain at the top of his field and the first to challenge McKay's claims Dan Goldin the boss of NASA and Dick Morris the controversial presidential adviser who wanted to use the story for Clinton's reelection and unfortunately made sure it ended up in the diary of a 200 an hour call girl Impeccably researched and thrillingly involving Kathy Sawyer's *The Rock from Mars* is an exemplary work of modern nonfiction a vivid account of the all too human high stakes drive to learn our true place in the cosmic scheme

**Rocks and Minerals** Anna Prokos, 2004 There's no such thing as a plain old rock In fact every rock tells a story about where it formed what it is made of and where it has been And at least one component in every rock has been on Earth since Earth formed Rocks even give us clues about what's going on under Earth's surface In *Rocks and Minerals* Discovery Channel shows you why every rock is a piece of history Book jacket

*The Search for Life on Other Planets* Bruce Jakosky, 1998-10-15 Does life exist on other planets This 1998 book presents the scientific basis for thinking there may be life elsewhere in the Universe It is the first to cover the entire breadth of recent exciting discoveries including the discovery of planets around other stars and the possibility of fossil life in meteorites from Mars Suitable for the general reader this authoritative book avoids technical jargon and is well illustrated throughout It covers all the major topics including the origin and early history of life on Earth the environmental conditions necessary for life to exist the possibility that life might exist

elsewhere in our Solar System the occurrence of planets around other stars and their habitability and the possibility of intelligent extraterrestrial life For all those interested in understanding the scientific evidence for and likelihood of extraterrestrial life this is the most comprehensive and readable book to date      **Radiogenic Isotope Geology** Alan P. Dickin,2018-02-08 The new edition of Radiogenic Isotope Geology examines revolutionary changes in geochemical thinking evaluating them in historical context      Worlds on Fire Charles Frankel,2005-09-22 Publisher Description      **Comets, Cosmology and the Big Bang** Allan Chapman,2018-11-23 This book will take the story of astronomy on from where Allan Chapman left it in Stargazers and bring it almost up to date with the developments and discoveries of the last three centuries He covers the big names Halley Hooke Herschel Hubble and Hoyle and includes the women who pushed astronomy forward from Caroline Herschel to the Victorian women astronomers He includes the big discoveries and the huge ideas from the Milky War to the Big Bang the mighty atom and the question of life on other planets And he brings in the contributions made in the US culminating in their race with the USSR to get a man on the moon before turning to the explosion of interest in astronomy that was pioneered by Sir Patrick Moore and The Sky at Night      The Earth Inside and Out David Roger Oldroyd,2002      **Our Worlds** Alan Stern,1999-02-11 Our Worlds provides a rare insider look into the universe and planetary science during the current golden age of space exploration Readers are guided on an exciting voyage of discovery by eight distinguished researchers who explore the universe with cutting edge techniques From Chief Scientist on NASA s New Millennium Program Ellen Stofan to planetary theorist Bill McKinnon each writes from a personal point of view sharing to the fullest the science and emotion found in the most enticing discoveries and the wonders of the solar system This volume gives readers an up close view of Mars Venus and the Moon a trip with Halley s Comet a visit to the moons of Io Titan and Triton and the ability to experience asteroids in their natural element Coverage details the most current knowledge of the solar system learned from space missions including Magellan and Galileo This volume fully captures the breadth of planetary science from inner to outer worlds from telescopic to robotic exploration and provides an unique glimpse into the drives and interests of the men and women behind the science It is the most encompassing book on the subject to date and will interest anyone who looks at the night sky and wonders what it would feel like to be able to get a closer look Alan Stern is a planetary scientist and astrophysicist with both observational and theoretical interests He is the leader of the Southwest Research Institute s Geophysical Astrophysical and Planetary Science group located in Boulder CO      **Astrobiology** Kevin W. Plaxco,Michael Gross,2021-08-03 Exploring the potential for extraterrestrial life and the origins of our own planet this comprehensive introduction to astrobiology is updated with the latest findings Informed by the discoveries and analyses of extrasolar planets and the findings from recent robotic missions across the solar system scientists are rapidly replacing centuries of speculation about potential extraterrestrial habitats with real knowledge about the possibility of life outside our own biosphere if it exists and if so where Casting new light on the biggest questions there are how did we get here and who

else might be out there this third edition of Kevin W Plaxco and Michael Gross's widely acclaimed *Astrobiology* incorporates a decade's worth of new developments in space to bring readers the most comprehensive up to date and engaging introduction to the field available Plaxco and Gross examine the factors that make our Universe habitable from the origin of chemical elements and the formation of the first galaxies and stars to the birth and composition of the planets They describe the latest thinking about the origins of life explain the evolution of metabolism and the development of complex organisms In order to assess the limits for life elsewhere they also explore life in extreme habitats and reveal how it informs the search for potential extraterrestrial habitats ones that might support extraterrestrial life New and updated illustrations enhance the book throughout Sharing fascinating findings from the comet mission Dawn the visit of New Horizons to Pluto and the work of the Deep Carbon Observatory which has revealed an incredible underground biosphere within our own planet Plaxco and Gross weave together cosmology astrophysics geology biochemistry biophysics and microbiology From neutron star mergers to the survival skills of tardigrades this fascinating book is an ideal primer for students or anyone curious about life and the Universe

**Meteorites, Comets, and Planets** A.M. Davis, 2005-11-21 Volume 1 provides a broad overview of the chemistry of the solar system It includes chapters on the origin of the elements and solar system abundances the solar nebula and planet formation meteorite classification the major types of meteorites important processes in early solar system history geochemistry of the terrestrial planets the giant planets and their satellite comets and the formation and early differentiation of the Earth This volume is intended to be the first reference work one would consult to learn about the chemistry of the solar system Reprinted individual volume from the acclaimed *Treatise on Geochemistry* 10 Volume Set ISBN 0 08 043751 6 published in 2003

**Multimessenger Astronomy** John Etienne Beckman, 2021-07-26 Written by a professional astronomer who has worked on a wide spectrum of topics throughout his career this book gives a popular science level

description of what has become known as multimessenger astronomy It links the new with the traditional showing how astronomy has advanced at increasing pace in the modern era In the second decade of the twenty first century astronomy has seen the beginnings of a revolution After centuries when all our information about the Universe has come via electromagnetic waves now several entirely new ways of exploring it have emerged The most spectacular has been the detection of gravitational waves in 2015 but astronomy also uses neutrinos and cosmic ray particles to probe processes in the centres of stars and galaxies The book is strongly oriented towards measurement and technique Widely illustrated with colourful pictures of instruments their creators and astronomical objects it is backed with descriptions of the underlying theories and concepts linking predictions observations and experiments The thread is largely historical although obviously it cannot be encyclopaedic Its point of departure is the beginning of the twentieth century and it aims at being as complete as possible for the date of completion at the end of 2020 The book addresses a wide public whose interest in science is served by magazines like Scientific American lively intelligent readers but without university studies in physics Fire and Ice Natalie Starkey,2021-09-30 A tour of the Solar System s tallest hottest coldest and weirdest volcanoes and a look inside what makes them erupt The volcano among the most familiar and perhaps the most terrifying of all geological phenomena However Earth isn t the only planet to harbour volcanoes In fact the Solar System and probably the entire Universe is littered with them Our own Moon which is now a dormant piece of rock had lava flowing across its surface billions of years ago while Mars can be credited with the largest volcano in the Solar System Olympus Mons which stands 25km high While Mars s volcanoes are long dead volcanic activity continues in almost every other corner of the Solar System in the most unexpected of locations We tend to think of Earth volcanoes as erupting hot molten lava and emitting huge billowing clouds of incandescent ash However it isn t necessarily the same across the rest of the Solar System For a start some volcanoes aren t even particularly hot Those on Pluto for example erupt an icy slush of substances such as water methane nitrogen or ammonia that freeze to form ice mountains as hard as rock While others like the volcanoes on one of Jupiter s moons Io erupt the hottest lavas in the Solar System onto a surface covered in a frosty coating of sulphur Whether they are formed of fire or ice volcanoes are of huge importance for scientists trying to picture the inner workings of a planet or moon Volcanoes dredge up materials from the otherwise inaccessible depths and helpfully deliver them to the surface The way in which they erupt and the products they generate can even help scientists ponder bigger questions on the possibility of life elsewhere in the Solar System Fire and Ice is an exploration of the Solar System s volcanoes from the highest peaks of Mars to the intensely inhospitable surface of Venus and the red hot summits of Io to the coldest seemingly dormant icy carapaces of Enceladus and Europa an unusual look at how these cosmic features are made and whether such active planetary systems might host life

**The Volcanoes of Mars** James R. Zimbelman,David A. Crown,Peter J. Mouginis-Mark,Tracy K. P. Gregg,2020-12-05 The Volcanoes of Mars offers a clear cohesive summary of Mars volcanology It begins with an introduction to the geology and

geography of the red planet and an overview of its volcanic history and continues to discuss each distinct volcanic province identifying the common and unique aspects of each region Incorporating basic volcanological information and constraints on the regional geologic history derived from geologic mapping the book also examines current constraints on the composition of the volcanic rocks as investigated by both orbiting spacecraft and rovers In addition it compares the features of Martian volcanoes to those seen on other volcanic bodies Concluding with prospects for new knowledge to be gained from future Mars missions this book brings researchers in volcanology and the study of Mars up to date on the latest findings in the study of volcanoes on Mars allowing the reader to compare and contrast Martian volcanoes to volcanoes studied on Earth and throughout the Solar System Presents clearly organized text and figures that will quickly allow the reader to find specific aspects of Martian volcanism Includes definitions of geological and volcanological terms throughout to aid interdisciplinary understanding Summarizes key results for each volcanic region of Mars and provides copious citations to the research literature to facilitate further discovery Synthesizes the most current data from multiple spacecraft missions including the Mars Reconnaissance Orbiter as well as geochemical data from Martian meteorites Utilizes published geologic mapping results to highlight the detailed knowledge that exists for each region

Advances in Autonomous Robotics Systems  
Michael Mistry,Aleš Leonardis,Mark Witkowski,Chris Melhuish,2014-08-23 This book constitutes the refereed proceedings of the 15th Conference on Advances in Autonomous Robotics TAROS 2014 held in Birmingham UK in September 2014 The 23 revised full papers presented together with 9 extended abstracts were carefully reviewed and selected from 48 submissions The overall program covers various aspects of robotics including navigation planning sensing and perception flying and swarm robots ethics humanoid robotics human robot interaction and social robotics

*Solar System* Thomas Hockey,Jennifer Lynn Bartlett,Daniel C. Boice,2021-08-12 Combining the latest astronomical results with a historical perspective Solar System Between Fire and Ice takes you on a fabulous tour of our intriguing Solar System Not content with a conventional discourse restricted to the major and minor bodies astronomers Hockey Bartlett and Boice venture beyond the limits of our system to look at exoplanets and to consider future trends in space exploration and tourism They discuss not only what scientists know about planets asteroids and comets but how the discoveries were made With extensive teaching experience their accessible prose clearly explains essential physical concepts Lavishly illustrated as well as carefully researched Solar System Between Fire and Ice delights the eyes as well as feeding the mind Detailed appendices provide additional technical data and resources for your own on line voyage of discovery Whether you are an educated layperson student teacher amateur astronomer or merely curious you will come away having learned the most up to date knowledge and enjoyed the process The authors bring a unique perspective to this subject combining their years of experience in research teaching and history of planetary science Prof Thomas Hockey is a professor of astronomy specializing in planetary science and the history of science Dr Jennifer Bartlett is an astronomer with a forte in dynamical motions of asteroids with

liberal arts teaching experience Dr Daniel Boice is an active research astronomer in planetary science especially comets with considerable teaching experience In the 1980s and 90s the Viking and Voyager missions provided droves of exciting information generating a new level of public interest Textbooks were rewritten and scientists worked to understand the data during mission poor period that followed In recent times however we have entered a new era There has been a multinational effort to expand our knowledge of the Solar System Data from these missions has been freely shared and has again raised the level of public interest Within this era of renewed interest it is appropriate as is done in this book to provide the public with an effort to present an integrated view of our Solar System and questions that the discovery of extrasolar planets have raised with regard to the Solar System as a whole Professor Reta Beebe recipient of NASA's Exceptional Public Service Medal I understand this book to be aimed at a general audience but I can also see its use as a text in astronomy classes especially in a community school or situations where students typically resist reading the textbook The writing is light and entertaining and will engage students yet it thoroughly covers all the basic concepts of a typical Astro 101 class Dr Katy Garmany winner of the American Astronomical Society's Annie J Cannon Award

Treatise on Geomorphology ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and

levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

The New Solar System J. Kelly Beatty, Carolyn Collins Petersen, Andrew Chaikin, 1999-01-28 The New Solar System now in its fourth edition is firmly established as the leading text on planetary science and solar system studies A distinguished team of researchers many of the Principal Investigators on NASA missions has carried out a complete revision of the text illustrations and tables The book has been completely redesigned to display hundreds of new images to best advantage and to make the reference data and tables easier to use New to this edition are descriptions of collisions in the solar system full scientific results from Galileo s mission to Jupiter and its moons and the Mars Pathfinder mission Sections on comets the search for other worlds and the search for life take into account the latest discoveries

National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program--Phase II, 2016-05-02 The Small Business Innovation Research SBIR program is one of the largest examples of U S public private partnerships and was established in 1982 to encourage small businesses to develop new processes and products and to provide quality research in support of the U S government s many missions The U S Congress tasked the National Research Council with undertaking a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs and with recommending further improvements to the program In the first round of this study an ad hoc committee prepared a series of reports from 2004 to 2009 on the SBIR program at the five agencies responsible for 96 percent of the program s operations including NASA In a follow up to the first round NASA requested from the Academies an assessment focused on operational questions in order to identify further improvements to the program Public private partnerships like SBIR are particularly important since today s knowledge economy is driven in large part by the nation s capacity to innovate One of the defining features of the U S economy is a high level of entrepreneurial activity Entrepreneurs in the United States see opportunities and are willing and able to assume risk to bring new welfare enhancing wealth generating technologies to the market Yet although discoveries in various fields present new opportunities converting these discoveries into innovations for the market

involves substantial challenges The American capacity for innovation can be strengthened by addressing the challenges faced by entrepreneurs
