Stein, Jeffrey J. Rosen, 1974 Cognitive Perspectives on Emotion and Motivation V. Hamilton, Gordon H. Bower, Nico H. Frijda, 2012-12-06 This book presents the contributions of the members of an Advanced Research Workshop on Cognitive Science Perspectives on Emotion Motivation and Cognition The Workshop funded mainly by the NATO Scientific Affairs Division together with a contribution from the British Economic and Social Research Council was conducted at Il Ciocco Tuscany Italy 21-27 June 1987 The venue for our discussions was ideal a quiet holiday hotel 500m high in the Apennine mountain range approached by a mile of perilously steep winding narrow road The isolation was conducive to concentrated discussions on the topics of the Workshop The reason for the Workshop was a felt need for researchers from disparate but related approaches to cognition emotion and motivation to communicate their perspectives and arguments to one another To take just one example the framework of information processing and the metaphor of mind as a computer has wrought a major revolution in psychological theories of cognition That framework has radically altered the way psychologists conceptualize perception memory language thought and action Those advances have formed the intellectual substrate for the cognitive science perspective on mental life **Handbook of Approach and Avoidance Motivation** Andrew J. Elliot, 2013-05-13 Of the many conceptual distinctions present in psychology today the approach avoidance distinction stands out as one of if not the most fundamental and basic The distinction between approach and avoidance motivation has a venerable history not only within but beyond scientific psychology and the deep utility of this distinction is clearly evident across theoretical traditions disciplines and content areas This volume is designed to illustrate and highlight the central importance of this distinction to serve as a one stop resource for scholars working in this area and to facilitate integration among researchers and theorists with an explicit or implicit interest in approach and avoidance motivation The main body of this volume is organized according to seven broad sections that represent core areas of interest in the study of approach and avoidance motivation including neurophysiology and neurobiology and evaluative processes Each section contains a

minimum of four chapters that cover a specific aspect of approach and avoidance motivation The broad applicability of the approach avoidance distinction makes this Handbook an essential resource for researchers theorists and students of social psychology and related disciplines

Neuroendocrinology of Behavior and Emotions Heather K. Caldwell, H. Elliott Albers, 2024-03-22 This volume highlights current research on how the neuroendocrine system helps to influence emotional states and ultimately behavioral output. Social relationships and context appropriate behavioral responses are important for the survival of most vertebrate species. These relationships can range from transient social interactions to strong social bonding between sexual partners and social behaviors can be observed and evaluated from the individual to the group level. Further behavioral output is shaped by complex interactions between the physical environment, genetics, experience, and context and are often modulated by the neuroendocrine system. In this book, experts in the field will provide a sweeping look at novel research in the neuroendocrine regulation of important behaviors ranging from parental care to social homeostasis with a focus on comparative studies across vertebrate species. The first part of the book is dedicated to the neuroendocrinology of relationships including the coordination of acoustic signals in songbirds, the complexity of social relationships in primates, and cooperation and parenting in humans. The second part of the book focuses on social behaviors and provides some insights into their regulation including the neuroendocrine regulation of maternal behavior in rodents, the roles of oxytocin and vasopressin in the modulation of sex-specific social behavior, the interactions between adult neurogenesis, the neuroendocrine system, and social behavior, and a consideration of neuroendocrine influences on reproductive decision making across species. The book concludes with a section on environmental influences on neuroendocrine systems underlying behavior including how social isolation and endocrine-disrupting chemicals affect the neuroendocrinology of behavior and emotions. Given its breadth, this volume is appropriate for undergraduate students, graduate students, postdoctoral researchers, and established researchers who are interested in neuroendocrinology and behavior. This is the sixteenth volume in the International Neuroendocrine Federation (INF) Masterclass in Neuroendocrinology series, which aims to illustrate the highest standards and highlight the latest technologies in basic and clinical research and aspires to provide inspiration for further exploration into the exciting field of neuroendocrinology.
