Personality The Skein Of Behavior

Shulamith Kreitler, Hans Kreitler

Personality The Skein Of Behavior:

Personality Russell G. Geen, 1976 The Cognitive Foundations of Personality Traits Shulamith Kreitler, Hans Kreitler, 2013-06-29 Hardly anything in psychology is as irking as the trait concept Psychologists and laypersons alike use primarily adjective trait names to characterize and even conceptualize the individuals they encounter There are more than a hundred well defined personality traits and a great many questionnaires for their assessment some of which are designed to assess the same or very similar traits Little is known about their ontogenetic development and even less about their underlying dynamics Psychoanalytic theory was invoked for explaining the psychodynamics underlying a few personality traits without however presenting sufficient empirical evidence for the validity of these interpretations In a reductionistic vein behaviorally inclined psychologists have propounded the thesis that all traits are acquired behaviors Yet this view neither reduces the number of personality tests nor explains the resistance of traits to modification by means of reward and punishment Dissatisfied with these and some other less well known approaches to personality traits we decided to explore whether applying our psychosemantic theory of cognition to the trait concept would do better The way we had to follow was anything but easy

Aggression Alyson Bond, Malcolm Lader, Jose da Silveira, 2013-06-20 The incidence of aggression and violence is of wide concern It is therefore vital that we try to understand the mechanisms involved This book outlines definitions and theories of aggressive behaviour and points out the contribution of both biological and psychological factors Aggression primarily occurs within an interpersonal exchange and is often accompanied by increased arousal and negative feelings It is most likely to occur in response to provocation but individuals differ in what they consider constitutes provocation Aggressive behaviour is both multicausal and multifaceted but in order to study it we have to break it down into components and find ways in which to measure these This book describes a body of research examining the conditions under which the behavioural affective and physiological components of aggression are elicited A specific experimental technique which measures behavioural aggression in the laboratory is described The task was found to be sensitive to individual differences in aggressive disposition Aggression is not however confined to a small group of extremely hostile individuals Alcohol or substance abuse is often associated with aggression in the general population The results of some studies examining the effects of alcohol and benzodiazepines on the feelings and behaviour of healthy volunteers are reported The way in which people appraise a situation influences the way they feel and behave These drugs therefore impair the ability to process socially relevant information which in turn lowers the threshold at which aggressive behaviour is likely to occur It is only by continuing to study the complex interaction between pharmacological and psychological factors that we will gain more insight into the processes underlying aggressive behaviour
