Advances in Artificial Life Dario Floreano, Jean-Daniel Nicoud, Francesco Mondada, 2007-10-23 No matter what your perspective is what your goals are or how experienced you are Artificial Life research is always a learning experience The variety of phenomena that the people who gathered in Lausanne reported and discussed for the fifth time since 1991 at the European Conference on Artificial Life ECAL has not been programmed crafted or assembled by analytic design It has evolved emerged or appeared spontaneously from a process of artificial evolution self organisation or development Artificial Life is a field where biological and artificial sciences meet and blend together where the dynamics of biological life are reproduced in the memory of computers where machines evolve behave and communicate like living organisms where complex life like entities are synthesised from electronic chromosomes and artificial chemistries The impact of Artificial Life in science philosophy and technology is tremendous Over the years the synthetic approach has established itself as a powerful method for investigating several complex phenomena of life From a philosophical standpoint the notion of life and of intelligence is continuously reformulated in relation to the dynamics of the system under observation and to the embedding environment no longer a privilege of carbon based entities with brains and eyes At the same time the possibility of engineering machines and software with life like properties such as evolvability self repair and self maintenance is

gradually becoming reality bringing new perspectives in engineering and applications **Software Engineering for Experimental Robotics** Davide Brugali, 2007-04-16 Software Engineering for Experimental Robotics collects contributions that describe the state of the art in software development for the Robotics domain It reports on innovative ideas that are progressively introduced in the software development process in order to promote the reuse of robotic software artifacts domain engineering components frameworks and architectural styles It illustrates the results of the most successful and well known research projects which aim to develop reusable robotic software systems Most of the chapters report on concepts and ideas discussed at the well attended ICRA2005 Workshop on Principles and Practice of Software Development in Robotics Barcelona Spain April 18 2005 The authors are recognised as leading scholars internationally and the result is an effective blend of fundamental and innovative results on research and development in software for robotic systems where one common factor is the integration of reusable building blocks Besides the advancement in the field most contributions survey the state of the art report a number of practical applications to real systems and discuss possible future developments
