Real Time Enterprise:

    The Real-Time Enterprise Dimitris N. Chorafas,2004-11-15 Successful management teams can identify the cost and return derived from the implementation of new technology and they can properly apply the technology toward gaining a competitive advantage IT and business managers alike need a resource that enables them to prepare for future operating conditions identify beneficial solutions and use high te   **The Practical Real-Time Enterprise** Bernd Kuglin,Heinz Thielmann,2005-08-15 Speed as a factor for success Our modern industrial society lives life in the fast lane The catchwords faster shorter more powerful reflect what we experience in almost all aspects of our lives Whether at home or at work we are constantly on the move and in a rush In our private lives we find rapid exchange of inf mation most entertaining and we are fascinated by the wide range of inf mation that pours in on us from all around the world mainly via the new media It gives us the feeling of being a part of the action everywhere and all the time Seldom are we aware that the only reason this flood of inf mation often referred to as overstimulation does not lead to overkill is that we manage to organize our time effectively There are many parallels to this in the business world Here too a great deal of time pressure is exerted from outside goals are set ever higher and deadlines become tighter In other words demands on our time demand faster reaction Crucial information travels around the globe across all time zones in a matter of seconds In fact instead of CET or CEST it would make sense to have a single time zone for the worldwide network called GST for Global Simultaneous Time In business more so than in p vate life we are almost constantly online   **The Concept of a Real-Time Enterprise in Manufacturing** Daniel Metz,2013-10-01 Enterprises have to react instantly to changing market conditions and disturbances that occur during execution of value creation processes Depending upon the processes context the goal is to significantly reduce lead times reaction times and time to market among others The vision of a real time enterprise RTE which is able to sense and analyze events from internal and external sources and perform adequate re actions has been envisaged by manufacturing enterprises Daniel Metz presents a framework based on EDA and CEP towards the realization of RTE in manufacturing The framework closes the vertical integration gap and further establishes feedback in near real time among enterprise levels As such the framework provides a holistic and closed loop control of manufacturing processes and encompasses results and insights from management engineering and computer science The framework has been implemented for a small and medium sized foundry in Germany The developed control approach has led to a significant increase in manufacturing processes efficiency i e performance quality and availability   Business Intelligence for the Real-Time Enterprise Malu Castellanos,Umeshwar Dayal,Timos Sellis,2009-08-03 In today s competitive and highly dynamic environment analyzing data to understand how the business is performing to predict outcomes and trends and to improve the effectiveness of business processes underlying business operations has become cri cal The traditional approach to reporting is no longer adequate users now demand easy to use intelligent platforms and applications capable of analyzing real time bu ness data to provide

insight and actionable information at the right time The end goal is to improve the enterprise performance by better and timelier decision making abled by the availability of up to date high quality information As a response the notion of real time enterprise has emerged and is beginning to be recognized in the industry Gartner defines it as using up to date information getting rid of delays and using speed for competitive advantage is what the real time enterprise is all about Indeed the goal of the real time enterprise is to act on events as they happen Although there has been progress in this direction and many com nies are introducing products toward making this vision a reality there is still a long way to go In particular the whole lifecycle of business intelligence requires new techniques and methodologies capable of dealing with the new requirements imposed by the real time enterprise **CRM in Real Time** Barton J. contacted The necessity of acquiring these three abilities has implications for the process related technical and organizational aspects of a business that are dealt with in detail in this book **Effective Business Intelligence Systems** Robert J. Thierauf,2001-06-30 One step above knowledge management systems are business intelligence systems Their purpose is to give decision makers a better understanding of their organization s operations and thus another way to outmaneuver the competition by helping to find and extract the meaningful relationships trends and correlations that underlie the organization s operations and ultimately contribute to its success Thierauf also shows that by tying critical success factors and key performance indicators into business intelligence systems an organization s most important financial ratios can also be improved Comprehensive and readable Thierauf s book will advance the knowledge and skills of all information systems providers and users It will also be useful as a text in upper level courses covering a wide range of topics essential to an understanding of executive business systems generally and specifically their creation and management The theme underlying Thierauf s unique text is that a thorough understanding of a company s operations is crucial if the company is to be moved to a higher level of competitive advantage Although data warehousing data mining the Internet the World Wide Web and other electronic aids have been in place for at least a decade it is the remarkable and unique capability of business intelligence systems to utilize them that has in turn revolutionized the ability of decision makers to find accumulate organize and access a wider range of information than was ever before possible Effective business intelligence systems give decision makers a means to keep their fingers on the pulse of their businesses every step of the way From this it follows that they are thus able to develop new more workable means to cope with the competition successfully Comprehensive and readable Thierauf s book will advance the knowledge and skills of all information systems providers and users It will also be useful as a text in upper level courses covering a wide range of topics essential to an understanding of executive business systems generally and specifically their creation and management Business Innovation and Disruptive Technology Nicholas D.
