Quark-Gluon Plasma: Theoretical Foundations J. Kapusta, B. Müller, J. Rafelski, 2003-11-25 The purpose of this volume is to trace the development of the theoretical understanding of quark gluon plasma both in terms of the equation of state and thermal correlation functions and in terms of its manifestation in high energy nuclear collisions Who among us has

not wondered how tall a mountain is on a neutron star what happens when matter is heated and compressed to higher and higher densities what happens when an object falls into a black hole or what happened eons ago in the early universe The study of quark gluon plasma is related in one way or another to these and other thought provoking questions Oftentimes the most eloquent exposition is given in the original papers To this end a selection is made of what are the most important pioneering papers in this field The early 1950s was an era when high energy multiparticle production in cosmic ray interactions attracted the attention of some of the brightest minds in physics and so it should be no surprise that the first reprinted papers deal with the introduction of statistical models of particle production The quark model arose in the 1960s while QCD as such was recognized as the theory of the strong interactions in the 1970 s The behavior of matter at high temperatures and supranuclear densities became of wide interest in the nuclear and particle physics communities starting in the 1970s which is when the concept of quark gluon plasma became established The history of the field has been traced up to the early 1990s There are three reasons for stopping at that point in time First most of the key theoretical concepts and formalisms arose before 1993 although many of them continue to be developed today and hopefully well into the future Second papers written after 1992 are much more readily available than those written before due to the advent of the World Wide Web and its electronic preprint databases and journals Finally in making this collection of reprints available as hardcopy one is limited in the number of pages and some papers in the present selection should have been deleted in order to make room for post 1993 papers For the same reason the subject focus must of necessity be limited which means that in this reprint collection two wide subject areas are not addressed the behavior of nuclear matter under extreme conditions is not reported nor is quark matter in neutron stars The broad categories into which the material has been placed reflect the diverse studies of quark gluon plasma and its manifestation They are phase space models of particle production perturbative QCD plasma lattice gauge theory fluid dynamics and flow strangeness heavy flavor charm electromagnetic signals parton cascade and minijets parton energy loss and jet quenching Hanbury Brown Twiss HBT interferometry disoriented chiral condensates phase transition dynamics and cosmology and color superconductivity Each chapter is prefaced by an introduction which contains a list of significant papers which is more complete than the reprinted papers though by no means exhaustive It also contains citations to most relevant papers published up to the date of completion of this volume fall 2002 It is hoped that the short reviews will help bring the reader up to date on the latest developments The selection of papers cited in each chapter and in particular the ones selected for reprinting is solely the responsibility of the Editors It is based on their best judgement and experience in this field dating back to the mid 1970s In order to be reprinted a paper must have been pioneering in the sense of originality and impact on the field Generally they have been cited over a hundred times by other papers published in refereed journals The final selection was reviewed and discussed among the Editors repeatedly Just because a paper is not included does not mean they do not know of it or do not have a high regard for it All of the papers

cited or reprinted are original research contributions There are three other types of publications listed The first is a compilation of books The second is a list of reviews many of which contain a significant amount of original material The third is a list of the proceedings of the series of Quark Matter meetings the primary series of international conferences in this field that is attended by both theorists and experimentalists

Hadrons and Quark-Gluon Plasma Jean Letessier, Johann Rafelski, 2023-02-09 This 2002 monograph now reissued as OA explores the primordial state of hadronic matter called quark gluon plasma

The Quark and the Jaguar Murray Gell-Mann, 1995-09-15 This book provides an explanation of the connections between nature at its most basic level and natural selection archaeology linguistics child development computers and other complex adaptive systems

The Theory of Quark and Gluon Interactions F.J. Yndurain, 2013-06-29 The present book is not merely an elaboration of the 1982 text *Quantum Chromodynamics An Introduction to the Theory of Quarks and Gluons* In fact a lot of material has been added some of which is entirely new and some of which is an extension of topics in the older text Among the latter there are two sections dealing with the background field method and the expansion of the section devoted to processes describable by perturbative QCD other than deep inelastic scattering into a whole chapter containing a detailed description of Drell Van scattering jet physics exclusive processes QCD sum rules etc Besides this we have added a completely new chapter on constituent models of hadrons including a derivation of the quark quark potential and also entirely new a half chapter containing a detailed introduction to lattice QCD An extra short chapter on the parameters of QCD and an appendix on group integration contribute to making the present book a really new text sufficiently so to justify the change of title to *The Theory of Quark and Gluon Interactions* a change that also emphasizes the consolidation of QCD as the theory of strong interactions Of course even with the inclusion of the new material there are whole areas of quark and gluon physics not covered at all

Pointlike Structures Inside and Outside Hadrons Antonio L. Zichichi, 2013-04-09 In August 1979 a group of 94 physicists from 60 laboratories in 21 countries met in Erice to attend the 17th Course of the International School of Subnuclear Physics The countries represented at the School were Argentina Australia Austria Belgium Canada Federal Republic of Germany France Hungary India Italy Japan Korea the Netherlands Norway Poland Rumania Spain Sweden the United Kingdom the United States of America and Yugoslavia The School was sponsored by the Italian Ministry of Public Education MPI the Italian Ministry of Scientific and Technological Research MRST the Sicilian Regional Government and the Weizman Institute of Science In the theoretical sessions as expected Sidney Coleman's lectures provided a new masterpiece in his Erice series Andre Martin lectured on the theory of new particles R L Jaffe on the Bag Model and Francis E Low on quark status at low energy In the more specialized section we were able to reflect on the problem of asymptotic changes in gauge theory troubles experienced with instantons and finally on the fate of false vacua thanks to A Patrascioiu R Petronzio and H Kleinert A quite exceptional event this year was the special QCD session wId_ch I leave the reader to enjoy without further introduction

Particle Physics in the New Millennium Josip

Trampetic, Julius Wess, 2008-01-11 The traditional purpose of the Adriatic Meeting is to present most advanced scientific research conducted by the lecturers who take part in the development of their fields and in addition to provide a school like atmosphere for young scientists Dubrovnik as a geographical centre of this region of Europe provided a most adequate location for this conference Having very agreeable surroundings the conference site nevertheless gave a focus for very strong scientific interaction The subjects chosen for the 8th meeting in September 2001 were gauge theories particle phenomenology string theories and cosmology We were able to bring together a very good cross section of outstanding scientists who gave extraordinarily good presentations Certainly one reason for this success is that most of us feel obliged to help the scientific life in South East Europe return to its former level However there are very exciting new scientific developments as well Part of the meeting was dominated by neutrino physics which has just seen exciting progress by establishing neutrino masses experimentally This was discussed within neutrino masses and grand unified theories GUTs General aspects of neutrino physics and CP violation neutrino mixing and the baryon asymmetry were presented along the same lines On the theoretical side the idea of the construction of gauge theories on non commutative spaces and their phenomenological implications is accepted worldwide within the particle physics community *The Theory of Quark and Gluon Interactions* Francisco J. Yndurain, 2007-06-21 F J Yndurain's book on Quantum Chromodynamics has become a classic among advanced textbooks First published in 1983 and translated into Russian in 1986 it now sees its fourth edition It addresses readers with basic knowledge of field theory and particle phenomenology The author presents the basic facts of quark and gluon physics in pedagogical form Theory is always confronted with experimental findings The reader will learn enough to be able to follow modern research articles This fourth edition presents a new section on heavy quark effective theories more material on lattice QCD and on chiral perturbation theory Medium-Energy Antiprotons and the Quark—Gluon Structure of Hadrons R. Klapisch, R. Landua, J.M. Richard, 2012-12-06 The fourth course of the International School on Physics with Low Energy Antiprotons was held in Erice Sicily at the Ettore Majorana Centre for Scientific Culture from 25 to 31 January 1990 The previous courses covered topics related to fundamental symmetries light and heavy quark spectroscopy and antiproton nucleus interactions The purpose of this school is to review theoretical and experimental aspects of low energy antiproton physics concerning the quark gluon structure of hadrons and the dynamics of the antiproton nucleon interaction Another important objective is the discussion of future directions of research with low and medium energy antiprotons in the context of future medium energy facilities at CERN and elsewhere These proceedings contain both the tutorial lectures and the various contributions presented during the school by the participants The proceedings have been organised in three sections The first section is devoted to the theoretical lectures and contributions The selection of the various subjects wants to emphasize the correlation between antiproton nucleon physics and the underlying description in terms of quarks and gluons The second section contains an overview about 35 years of experiments with antiprotons It gives

an introduction to the particle physics aspects of the field by outlining the historical development of experiment and theory and by describing the motivation and the results of three recent LEAR experiments in more detail The third section contains most of the contributions of the participants describing in more detail certain aspects of current or planned experiments at LEAR

The Gribov Theory Of Quark Confinement Julia Nyiri, 2001-12-28 V N Gribov one of the founders of modern particle physics shaped our understanding of QCD as the microscopic dynamics of hadrons This volume collects his papers on quark confinement showing the road he followed to arrive at the theory and formulating the theory itself It begins with papers providing a beautiful physical explanation of asymptotic freedom based on the phenomenon of antiscreening and demonstrating the inconsistency of the standard perturbative treatment of the gluon fields Gribov copies Gribov horizon It continues with papers presenting the Gribov theory according to which confinement of colour is determined by the existence of practically massless quarks

Perspectives in Hadronic Physics Sigfrido Boffi, Claudio Ciofi Degli Atti, Mauro M. Giannini, 2012-12-06 This volume contains the invited and contributed papers presented at the Fourth International Conference on Perspectives in Hadronic Physics and sent to the Editors within the deadline The Conference was held at the Abdus Salam International Centre for Theoretical Physics ICTP Trieste Italy from May 12th to 16th 2003 and was attended by about 100 scientists from 20 countries The series of Conferences on Perspectives on Hadronic Physics takes place every two years since 1997 and follows the seven Workshops on Perspectives in Nuclear Physics at Intermediate Energies organized every two years at ICTP since 1983 The aim of these Conferences is to discuss the status of the art concerning the experimental and theoretical investigations of hadronic systems from nucleons to nuclei and dense nuclear matter in terms of the relevant underlying degrees of freedom For such a reason the Fourth Conference has been focused on those experimental and theoretical topics which have been in the last few years the object of intensive investigations viz the various approaches employed to describe the structure of hadrons in terms of QCD and QCD inspired models the recent developments in the treatment of the properties and propagations of hadronic states in the medium the relevant progress done in the solution of the few and many hadron problems the recent results in the experimental investigation of dense hadronic matter and last but not least the physics programs of existing Laboratories and the suggested projects for new Facilities
