## **Reality As Conscious Experience:**

**Conscious Experience** W.H. Sparks, 2014-06-27 The fundamental principles that explain the heretofore mysterious phenomena of consciousness are 1 Consciousness is energies of the environment and energies developed in intrafusal muscle spindles are conscious experience and 2 the experience occurring as the developed energies depending on purpose and intensity are detected by muscle receptors The conscious experience occurs as perception the experience of the environment imagery imagination memory and dreams feelings emotion or when agreed to the meanings of language Consciousness and conscious experience are not subject to the interpretations of scientific and religious knowledge because consciousness is the individual experience of each and every person In *Conscious Experience* author W H Sparks presents a discussion of the relationship of consciousness and experience based on his extensive research and his personal experiences Along with a review of the development of the theory of consciousness Sparks offers a plethora of facts and thoughts about conscious experience including An explanation of the nature and experience of consciousness How the experience of energies detected by receptors constitutes conscious experience The idea that conscious experience is detected as the energies developed in the intrafusal spindles by muscle receptors How consciousness is experienced by the muscle system The structures of experience are the intrafusal muscle spindles The impulse activity transduced from the detected energies innervates the muscle system The recognition of the part the muscle receptors play in conscious experience is the process that finally answers the question of consciousness and conscious experience In the *Conscious Experience* Sparks provides information that shows conscious experience includes perception imagery feelings and the meanings of language all qualities unique to each individual

*Conscious Experience* Thomas Metzinger, 1995 The contributions to this book are original articles representing a cross section of current philosophical work on consciousness and thereby allowing students and readers from other disciplines to acquaint themselves with the very latest debate so that they can then pursue their own research interests more effectively The volume includes a bibliography on consciousness in philosophy cognitive science and brain research covering the last 25 years and consisting of over 1000 entries in 18 thematic sections compiled by David Chalmers and Thomas Metzinger

**A Psychological Approach to Ethical Reality** K. Hillner, 2000-11-16 The pre eminent 19th century British ethicist Henry Sidgwick once said All important ethical notions are also psychological except perhaps the fundamental antitheses of good and bad and wrong with which psychology as it treats of what is and not of what ought to be is not directly concerned quoted in T N Tice and T P Slavens 1983 Sidgwick s statement can be interpreted to mean that psychology is relevant for ethics or that psychological knowledge contributes to the construction of an ethical reality This interpretation serves as the basic impetus to this book but Sidgwick s statement is also analyzed in detail to demonstrate why a current exposition on the relevance of psychology for ethical reality is necessary and germane

*Language and Conscious Experience* W. H. Sparks, W.H. Sparks, 2010-02 *Language and Conscious Experience* is a philosophical theory of

consciousness The book presents a theory that accommodates every aspect of consciousness and conscious experience The aspects referred to are perception imagery including memory and dreams feelings emotion and the acquisition and development of language including the origination of meaning The nature of consciousness is the energies detected by sensory receptors The nature of conscious experience is the detection by spindle receptors of energies developed and enhanced in intrafusal muscle spindles We experience the environment in the form of sensations sight hearing taste smell and touch to use the common and traditional identifications Consciousness is experienced by the detection of intrafusal muscle spindles The spindle receptor detection is analogous to the detection of the environment by sensory receptors The difference of course is that we are conscious as the detection of the intrafusal spindles The purpose of the neuromuscular system is response to the energies of the environment The purpose of the intrafusal spindles is to control the neuromuscular system Efferent impulse activity from synaptic activity enhances the intrafusal spindles that can then be detected as conscious experience Energies developed in the intrafusal spindles are determined by the innervation of the system When enhanced from configured synaptic activity the innervation is modified by the synaptic activity configured by experience

**Brain and Conscious Experience** John C. Eccles, 2012-12-06 The planning of this Study Week at the Pontifical Academy of Science from September 28 to October 4 1964 began just two years before when the President Professor Lemaitre asked me if I would be responsible for a Study Week relating Psychology to what we may call the Neurosciences I accepted this responsibility on the understanding that I could have assistance from two colleagues in the Academy Professors Heymans and Chagas Besides participating in the Study Week they gave me much needed assistance and advice in the arduous and at times perplexing task that I had undertaken and I gratefully acknowledge my indebtedness to them Though there have been in recent years many symposia concerned with the so called higher functions of the brain for example with perception learning and conditioning and with the processing of information in the brain there has to my knowledge been no symposium specifically with brain functions and consciousness since the memorable treating Laurentian Conference of 1953 which was later published in 1954 as the book *Brain Mechanisms and Consciousness*

**Psychological Perspectives on Reality, Consciousness and Paranormal Experience** Tony Jinks, 2019-10-03 This book explores various explanatory frameworks for paranormal encounters It opens with the story of an inexplicable human figure seen crossing a secluded hotel corridor interpreted as a ghost by the sole witness The subsequent chapters explore the three most important historical perspectives accounting for this and other types of paranormal experience Each perspective is examined from first principles with specific reference to what happened in the corridor how it happened why it happened and who might be responsible The first perspective considers the experience to be legitimate to be something real and various possibilities are presented that are grounded in the paranormal and parapsychological literature among which a ghost is one putative explanation In turn the second perspective treats the experience as being wholly illegitimate With reference to psychological theory the ghost

sighting is a product of erroneous consciousness The third perspective is different yet again and considers the sighting to be authentic but argues that explaining the ghost requires a radical departure from conventional models of reality and consciousness By contrasting these three paths the book provides a valuable resource for readers interested in the philosophical and psychological origins of explanations for paranormal experiences from the 19th century to the present It will appeal to general readers in addition to students and scholars of parapsychology anomalistic psychology and consciousness studies

*The Nature of Experience* W. H. Sparks, 2011-11-23 This study identifies the structures and processes that create consciousness and the conscious experience The expression of perceptions memories dreams and emotions develop and are enhanced in intrafusal muscle spindles These expressions in many cases are common to us all We experience the environment as reality in the form of sensations sight hearing taste smell and touch to use the common and traditional identifications Consciousness is experienced in the intrafusal muscle spindles The fundamental purpose of the spindles is to control the muscular system The process of control is the detection of the energy by a second set of receptors the spindle receptors The second set of receptors is critical to an explanation of the theory and serves to explain what heretofore has been the unknown factor in conscious experience the experience of consciousness The spindle receptor detection is analogous to the detection of the environment by sensory receptors The difference of course is that we are the intrafusal spindles detected by the spindle receptors It is the efferent impulse activity from the congenitally and experientially configured synaptic activity that enhances the energies developed in the spindles as experience This process is necessary for the experience of consciousness and the effective control of behavior For centuries man has reflected upon the conscious nature of the human species The Nature of Experience offers a new perspective on this eternal question

*Facing Reality* J. C. Eccles, 2013-11-11 The titling of this book Facing Reality came to me unbidden presumably from my subconscious But when it came it seemed to be right because that essentially is what I am trying to do in this book Facing is to be understood in the sense of looking at in a steadfast and unflinching manner It thus contrasts with Confronting which has the sense of looking at with hostility and defiance As I face life with its joys and its sorrows its successes and its failures its peace and its turmoil my attitude is one of serene acceptance and gratitude and not one of angry and arrogant confrontation and rejection The other component of the title Reality is the ultimate reality for each of us as conscious beings our birth our self hood in its long stream of becoming throughout our life our death and apparent annihilation This is the Reality that we each of us must face if we are to live and adventure as free and responsible beings and not as mere playthings of chance and circumstance going through a mean ingless farce from birth to death with the search ever for distraction and self forgetfulness As a brain scientist I have specialist knowledge of that wonderful part of the body that is alone concerned in the whole life long interplay between the conscious self and the external world including other selves

*Neuropsychological Foundations of Conscious Experience* Jason W. Brown, 2010-06 Neuropsychological Foundations of

Conscious Experience retraces the growth of microgenetic theory from its beginnings in neuropsychology and aphasia in relation to other genetic models of cognition. The account of the mind-brain state and subjective time and change is explored in relation to psychoanalytic concepts of the unconscious as well as philosophical ideas on intentionality, subjectivity and truth. In a final chapter, the theory aims to elucidate creative thinking and mystical experience. The primary aim is to aid the reader to see the progression from clinical studies to theoretical speculation in a way that condenses more extensive and technical writings. This book should appeal to both lay and professional readers with an interest in these topics. It is the author's contention that microgenetic theory is the only available and fully coherent account of the mind that covers not only clinical disorders but normal cognition and metapsychological issues relating to an evolutionary brain model. Jason W. Brown, for over 30 years Clinical Professor of Neurology at New York University, is best known for his microgenetic theory. The theory began with observations on language disorders and neuropsychological studies and was extended to problems in process theory, especially that of time change and related issues in philosophy of mind. The author lectures widely on various topics and has published 8 books and over 200 articles.

*Individual Differences in Conscious Experience* Robert G. Kunzendorf, Benjamin Wallace, 2000. *Individual Differences in Conscious Experience* is intended for readers with philosophical, psychological or clinical interests in subjective experience. It addresses some difficult but important issues in the study of consciousness, subconsciousness and self-consciousness. The book's fourteen chapters are written by renowned pioneering researchers who collectively have published more than fifty books and more than one thousand journal articles. The editors' introductory chapter frames the book's subtext: that mind-brain theories embodying the constraints of individual differences in subjective experience should be given greater credence than nomothetic theories ignoring those constraints. The next five chapters describe research and theory pertaining to individual differences in conscious sensations, specifically individual differences in pain perception, phantom limbs, gustatory sensations and mental imagery. Then two succeeding chapters focus on individual differences in subconsciousness. The final six chapters address individual differences in altered states of self-consciousness, dreams, hypnotic phenomena and various clinical syndromes.

[Information—Consciousness—Reality](#) James B. Glattfelder, 2019-04-10. This open access book chronicles the rise of a new scientific paradigm offering novel insights into the age-old enigmas of existence. Over 300 years ago, the human mind discovered the machine code of reality: mathematics. By utilizing abstract thought systems, humans began to decode the workings of the cosmos. From this understanding, the current

scientific paradigm emerged ultimately discovering the gift of technology Today however our island of knowledge is surrounded by ever longer shores of ignorance Science appears to have hit a dead end when confronted with the nature of reality and consciousness In this fascinating and accessible volume James Glattfelder explores a radical paradigm shift uncovering the ontology of reality It is found to be information theoretic and participatory yielding a computational and programmable universe

**Consciousness** Quentin Smith,Aleksandar Jokic,2003-01-23 Consciousness is perhaps the most puzzling problem we humans face in trying to understand ourselves It has been the subject of intense study for several decades but despite substantial progress the most difficult problems have still not reached any generally agreed solution Future research can start with this book Eighteen original specially written essays offer new angles on the subject The contributors who include many of the leading figures in philosophy of mind discuss such central topics as intentionality phenomenal content knowledge of mental states consciousness and the brain and the relevance of quantum mechanics to the study of consciousness

**Consciousness and Fundamental Reality** Philip Goff,2017-07-21 A core philosophical project is the attempt to uncover the fundamental nature of reality the limited set of facts upon which all other facts depend Perhaps the most popular theory of fundamental reality in contemporary analytic philosophy is physicalism the view that the world is fundamentally physical in nature The first half of this book argues that physicalist views cannot account for the evident reality of conscious experience and hence that physicalism cannot be true Unusually for an opponent of physicalism Goff argues that there are big problems with the most well known arguments against physicalism Chalmers zombie conceivability argument and Jackson s knowledge argument and proposes significant modifications The second half of the book explores and defends a recently rediscovered theory of fundamental reality or perhaps rather a grouping of such theories known as Russellian monism Russellian monists draw inspiration from a couple of theses defended by Bertrand Russell in *The Analysis of Matter* in 1927 Russell argued that physics for all its virtues gives us a radically incomplete picture of the world It tells us only about the extrinsic mathematical features of material entities and leaves us in the dark about their intrinsic nature about how they are in and of themselves Following Russell Russellian monists suppose that it is this hidden intrinsic nature of matter that explains human and animal consciousness Some Russellian monists adopt panpsychism the view that the intrinsic natures of basic material entities involve consciousness others hold that basic material entities are proto conscious rather than conscious Throughout the second half of the book various forms of Russellian monism are surveyed and the key challenges facing it are discussed The penultimate chapter defends a cosmopsychist form of Russellian monism according to which all facts are grounded in facts about the conscious universe

*The Creation of Reality in Psychoanalysis* Richard Moore,2013-06-17 It has become almost de rigueur in contemporary psychoanalysis to cite Freud s positivism especially his commitment to an objective reality that can be accessed through memory and interpretation as a continuing source of weakness in bringing the field into the postmodern era But is it so simple to move beyond Freud and objectivism in general

Or is it the case that even the most astute recent theorizing aimed at this move and guided by therapeutic sensitivity and a concern with epistemic rigor still betrays a lingering commitment to objective reality This is the intellectually exciting and exacting question that Richard Moore poses to his reader and to the texts of four of the most influential psychoanalytic theorists on the scene today Donald Spence Roy Schafer Robert Stolorow and Irwin Z Hoffman Written with concentration and grace *The Creation of Reality in Psychoanalysis* begins with the ambiguities in Freud's founding commitment to a recoverable objectively verifiable reality before examining the ghost of objectivism that confounds in surprising and unexpected ways Spence's Schafer's Stolorow's and Hoffman's recent attempts to move toward narrativist and constructivist views of the analytic encounter Following his penetrating survey of the contributions of these four major architects of contemporary psychoanalysis Moore provides a glimpse of what an internally consistent postmodern metapsychology would actually look like He approaches this task by exploring how our understanding of basic analytic concepts may ultimately be reconciled with the view that the creation of reality is an intrinsic aspect of any therapeutic encounter Elegantly conceived and beautifully argued this book guides the reader through the labyrinth of contemporary theory while holding fast to a critical stance toward its overarching goal the elaboration of a truly thoroughgoing constructivism that is both therapeutically consequential and intellectually defensible
