neighbor the moon and then goes on to explore each planet in the solar system asteroids meteors comets and the sun Following this the reader is whisked away into deep space to explore celestial bodies including stars that are known and many sights less familiar The final chapter includes a detailed atlas of deep sky objects visible through binoculars The appendices include guidance on how to buy care for and maintain astronomical binoculars tips and hints on using them and detailed information on several home made binocular mounts

Morphisms for Quantitative Spatial Analysis Daniel A. Griffith, Jean H. P. Paelinck, 2018-03-07 This book treats the notion of morphisms in spatial analysis paralleling these concepts in spatial statistics Part I and spatial econometrics Part II The principal concept is morphism e g isomorphisms homomorphisms and allomorphisms which is defined as a structure preserving the functional linkage between mathematical properties or operations in spatial statistics and spatial econometrics among other disciplines The purpose of this book is to present selected conceptions in both domains that are structurally the same even though their labelling and the notation for their elements may differ As the approaches presented here are applied to empirical materials in geography and economics the book will also be of interest to scholars of regional science quantitative geography and the geospatial sciences It is a follow up to the book Non standard Spatial Statistics and Spatial Econometrics by the same authors which was published by Springer in 2011

Duality Principles in Nonconvex Systems David Yang Gao,2013-03-09 Motivated by practical problems in engineering and physics drawing on a wide range of applied mathematical disciplines this book is the first to provide within a unified framework a self contained comprehensive mathematical theory of duality for general non convex non smooth systems with emphasis on methods and applications in engineering mechanics Topics covered include the classical minimax mono duality of convex static equilibria the beautiful bi duality in dynamical systems the interesting tri duality in non convex problems and the complicated multi duality in general canonical systems A potentially powerful sequential canonical dual transformation method for solving fully nonlinear problems is developed heuristically and illustrated by use of many interesting examples as well as extensive applications in a wide variety of nonlinear systems including differential equations variational problems and inequalities constrained global optimization multi well phase transitions non smooth post bifurcation large deformation mechanics structural limit analysis differential geometry and non convex dynamical systems With exceptionally coherent and lucid exposition the work fills a big gap between the mathematical and engineering sciences It shows how to use formal language and duality methods to model natural phenomena to construct intrinsic frameworks in different fields and to provide ideas concepts and powerful methods for solving non convex non smooth problems arising naturally in engineering and science Much of the book contains material that is new both in its manner of presentation and in its research development A self contained appendix provides some necessary background from elementary functional analysis Audience The book will be a valuable resource for students and researchers in applied mathematics physics mechanics and engineering The whole volume or selected chapters can also be recommended as a text for both senior undergraduate and graduate courses in applied mathematics mechanics general engineering science and other areas in which the notions of optimization and variational methods are employed

The Gravitational Electron William M. MacArthur,2019-02-12 Consequences for the current model of the electron of a proposed variation of the gravity constant with time If the strength of gravity decreases or decreased with time then it is shown that the electron could be a quantum black hole and this introduces a possible new derived constant of nature These results are developed to reveal that for the electron rest mass energy spin energy and electrical energy are all equivalent under these premises and precisely opposed to gravitational self energy Also that the rest mass energy of the electron is essentially the kinetic energy of its spin Lastly electric charge is expressed in gravitational terms as a general principle

Inventing Reality Bruce Gregory,1990-05-31 Physicists invented a language in order to talk about the world This book does not set out to explain the discipline but rather to explore the relationship between the language of physics and the world it describes The physics whose history the author traces here is concerned with understanding the ultimate constituents of matter and the nature of the forces through which these constituents interact The very precise language mathematics of physicists gives us an opportunity to see more clearly than is otherwise possible just how much of what we find in the world is a result of the way we talk about it Anyone interested in the history of physics and its language would enjoy reading this book
