As the thesis give a hint about the thesis as a threaded needle in a wooden box after all the pieces, the line of reasoning from the box to it and brings it all together.

There are numerous ways to structure an essay, and those methods of development include these organizational structures:

**Reasoning About Plans** James Allen, Henry Kautz, Richard Pelavin, Josh Tenenber, 2014 This book presents four contributions to planning research within an integrated framework James Allen offers a survey of his research in the field of temporal reasoning and then describes a planning system formalized and implemented directly as an inference process in the temporal logic Starting from the same logic Henry Kautz develops the first formal specification of the plan recognition process and develops a powerful family of algorithms for plan recognition in complex situations Richard Pelavin then extends the temporal logic with model operators that allow the representation to support reasoning about complex planning situations involving simultaneous interacting actions and interaction with external events Finally Josh Tenenber introduces two different formalisms of abstraction in planning systems and explores the properties of these abstraction techniques in depth

Reasoning with Plans: Inference of Semantic Relationships Among Plans About Urban Development Nikhil Kaza, 2008 Plans have been considered the end products of planning activity and research has focused on how plans are made Careful thought has not been accorded to how plans are used after they are made in reasoning about and choosing how to act In any given situation various organisations make plans some of which have overlapping scopes and intersecting intentions As a result the actions considered in these plans have semantic relationships such as substitutability interdependence and contingency with one another The purpose of this dissertation is to identify and explain the semantic relationships between actions within and among plans to better understand how to reason with plans and about actions The thesis defended is that it is useful and possible to reason from multiple plans when deciding what to do A plan contains information about interdependencies and uncertainties of multiple decisions and actions considered by an actor These relationships are not limited to actions within one's own purview One has to consider also the effects of others' actions and intentions on one's own Since a single plan cannot account for all these interdependencies even for one actor every actor should consider multiple plans both plans of her own and those of others in making decisions This dissertation examines the various plans made over time by various organisations in McHenry and Champaign counties in Illinois Relationships between ii actions within and among multiple plans can be discovered using attributes of actions and the configurations of actions within a single plan so that they can be considered in future planning and decision making It builds upon multiple disciplines and methodologies to represent actions situations intentions and relationships among them Simple databases based on real situations were used to demonstrate that these relationships can be encoded and queried in reasoning with plans The results demonstrated that previously discovered semantic relationships can be used to discover

additional relationships across plans thereby enriching the decision making The approach provides a systematic way of structuring the information in plans so that reasoning about relationships among actions across multiple plans is possible
