Gui Xue, Urs Maurer, Mohamed L Seghier, 2015-01-22 Reading is an integral part of life in today's information driven societies Since the pioneering work of Dejerine on word blindness in brain lesioned patients the literature has increased exponentially from neuropsychological case reports to mechanistic accounts of word processing at the behavioural neurofunctional and computational levels tapping into diverse aspects of visual word processing These studies have revealed some exciting findings about visual word processing including how the brain learns to read how changes in literacy impact upon word processing strategies and whether word processing mechanisms vary across different alphabetic logographic or artificial writing systems Other studies have attempted to characterise typical and atypical word processes in special populations in order to explain why dyslexic brains struggle with words how multilingualism changes the way our brains see words and what the exact developmental signatures are that would shape the acquisition of reading skills Exciting new insights have also emerged from recent studies that have investigated word stimuli at the system network level by looking for instance at how the reading system interacts with other cognitive systems in a context dependent fashion how visual language stimuli are integrated into the speech

processing streams how both left and right hemispheres cooperate and interact during word processing and what the exact contributions of subcortical and cerebellar regions to reading are The contributions to this Research Topic highlight the latest findings regarding the different issues mentioned above particularly how these findings can explain or model the different processes mechanisms pathways or cognitive strategies by which the human brain sees words The introductory editorial summarising the contributions included here highlights how varieties of behavioural tests and neuroimaging techniques can be used to investigate word processing mechanisms across different alphabetic and logographic writing systems

College Belonging Lisa M. Nunn, 2021-02-12 College Belonging reveals how colleges and universities efforts to foster a sense of belonging in their students are misguided Colleges bombard new students with the message to get out there and find your place by joining student organizations sports teams clubs and the like Nunn shows that this reflects a flawed understanding of what belonging is and how it works Drawing on the sociological theories of Emile Durkheim College Belonging shows that belonging is something that members of a community offer to each other It is something that must be given like a gift Individuals cannot simply walk up to a group or community and demand belonging That s not how it works The group must extend a sense of belonging to each and every member It happens by making a person feel welcome to feel that their presence matters to the group that they would be missed if they were gone This critical insight helps us understand why colleges push for students simply to get out there does not always work

Social Movements and Organization Theory Gerald F. Davis, Doug McAdam, W. Richard Scott, Mayer N. Zald, 2005-05-09 Although the fields of organization theory and social movement theory have long been viewed as belonging to different worlds recent events have intervened reminding us that organizations are becoming more movement like more volatile and politicized while movements are more likely to borrow strategies from organizations Organization theory and social movement theory are two of the most vibrant areas within the social sciences This collection of original essays and studies both calls for a closer connection between these fields and demonstrates the value of this interchange Three introductory programmatic essays by leading scholars in the two fields are followed by eight empirical studies that directly illustrate the benefits of this type of cross pollination The studies variously examine the processes by which movements become organized and the role of movement processes within and among organizations The topics covered range from globalization and transnational social movement organizations to community recycling programs
