Rebels And Reformers Of The Airways:

REBEL & REFORMER OF AIRWAYS Ronald Edward George Davies, 1987-06-17 Twenty five profiles of airline pioneers

Rebels and Reformers of the Airways Ronald Edward George Davies, 1987-01-01 Beretter om 25 kendte personligheder og foregangsmand inden for den civile luftfart i USA Canada Storbritannien Europa Latinamerika Asien og Australien **Airline Executives and Federal Regulation** Walter David Lewis, 2000 This book is a collection of eight case studies of relationships between airline executives and federal regulatory agencies from the passage of the Air Commerce Act in 1926 to the Airline Deregulation Act of 1978 By focusing on the lives and personalities of individual entrepreneurs Walter David Lewis and his contributors hope to explore the interaction between technology government regulation and entrepreneurship Each essay in the book focuses on a particular airline executive such as Eddie Rickenbacker Robert Six and Donald Nyrop Lewis has been careful to give a variety of perspective Airlines of various types are represented large and small scheduled and unscheduled Some of the executives profiled were known for having adversative relationships with federal regulators whereas others wholeheartedly accepted regulation and thrived under it There have been public calls for a return to airline regulation and Lewis thinks it is not inconceivable that regulation may ultimately return if problems continue and conditions deteriorate further But he says it is well to remember that deregulation occurred because there were flaws in the regulatory system it replaced This collection of essays scholarly and well documented but written in a lively style suitable for specialists and nonspecialists alike provides a long range perspective on the issue of airline deregulation *The Flight of the Starling* Iain Hutchison, 1992 Eric Starling shot to fame landing a two seater bi plane on a Calais street in darkness From this inauspicious start he became one of that select breed who pioneered commercial flying in Scotland This is his story

Over Empires and Oceans Robert Bluffield, 2014-11-19 This is a story of pioneers intrepid aviators adventurers tycoons and innovators It is also a story of dedication and determination for despite fixed wing aircraft proving their value over the battlefields of the Western Front during the First World War convincing governments and public alike that they had a role in peacetime proved far more challenging The Americans as inventors of heavier than air powered flight had briefly courted with a passenger airline across Tampa Bay in 1914 yet it took a further nine years for mail to be flown coast to coast In 1919 a British company made the first international scheduled flight between London and Paris but the continuation of regular services was thwarted by a less than enthusiastic government that allowed its generously subsidised French competition for a short time at least to fly cross Channel passenger schedules unimpeded The British eventually realized that fast links with their Empire were vital followed the example of the French and Dutch who had forged air links with their cousins in North Africa and the Far East Meanwhile in South America the Germans forbidden under the Versailles Treaty from any major aircraft building were establishing cunning supremacy by forming airlines throughout South America and in China While America awaited a transcontinental passenger service Juan Trippe's Pan American Airways was crossing swords with Ralph

O'Neill of New York Rio Buenos Aires Line NYRBA for air supremacy between the US Brazil Argentina and elsewhere in Latin America that led to the formation of arguably the world's greatest airline. In Russia Igor Sikorsky had built a vast passenger-carrying aircraft the Il ya Muromets and politicians debated whether giant airships or fixed-wing aircraft should rule the skies an issue that was put firmly to bed when the mighty German airship Hindenburg exploded while mooring at Lakehurst in 1937. Robert Bluffield's highly researched and detailed account tells the dramatic stories of explorers such as Kingsford Smith Lindbergh and Cobham and flamboyant entrepreneurs some well known others forgotten who risked fortunes and reputations to follow their dreams of reaching and ruling the skies over empires continents and oceans. Against bewildering adversity corruption underhanded deals and dwindling resources these tenacious individuals braved the elements using primitive entirely unsuitable equipment to establish earth-shrinking aerial services that criss-crossed the great oceans and the globe's most inhospitable territories. These are the stories of those pioneers of A-ropostale CNAC Air Orient Imperial Airways KLM Deutsche Luft Hansa Pan Am SCADTA The Condor Syndicat Qantas and others that had a far-reaching impact on the way the modern world would travel. Winged Crusade, 2003. This bibliography lists a selected portion of the McDermott Cadet Library's holdings on the American experience of manned powered flight during the twentieth century. Excluded are newspaper articles most pictorial works works dealing with lighter-than-air flight and studies of rotorcraft.

Aviator of Fortune Erik Benson, 2006. To understand Yerex's remarkable career Erik Benson focuses on the uniqueness of the entrepreneur's background one that enabled him to empathize with both Great Britain and the United States and to foster working relationships with these rivals. Yerex's dealings with the two countries shed new light on the development of aviation in the 1930s and 1940s at a time when Pan American ruled the skies of the western hemisphere when revolutions and coups rocked governments and when fortunes waited to be made and lost. *Transforming the Skies* Peter Reese, 2018-02-16. Following the Armistice of 1918 the British Air Industry and the newly founded RAF held a low place in national priorities. The RAF was rapidly run down with the infant airlines being given the least possible help and this neglect continued during the 1920s. The RAF's role was questioned and civilian air travel remained a dream for most and the province of the well-heeled few. But the breakdown of the Geneva Disarmament Talks led to renewed interest in the National Air Force and the rise of the European dictators brought calls for rapid modernisation and interceptor aircraft together with the development of further European civilian air routes. Here Peter Reese charts the dramatic changes that swept aviation across the dynamic interwar period revealing the transformative last-minute preparations for defence in a world where much depended on the contributions of some outstanding individuals. *Working towards the Monarchy* Serhat Ünalı, 2016-05-31. In the twilight years of Thailand's ailing King Bhumibol battles between royalists and their red-shirt opponents are increasing and the tectonic shifts that lie beneath Thailand's decade-old political crisis have become increasingly apparent. Serhat naldi's *Working towards the Monarchy* sheds new light on recent developments with its bold analysis of urban space in downtown

Bangkok buildings the author finds are abstractions of the complexities that shape Thailand's transformation. Most criticism of the political role of the Thai monarchy, its deep involvement in Thailand's uneven capitalist development, Bhumibol's endorsement of military coups and his silent acquiescence to political violence, has focused on the role of individuals: the king, the royal family or privy councilors. Naldi departs from such limited intentionalist approaches to show instead just how deeply enmeshed the monarchy is in Thai society as a whole. He demonstrates how and why Thais from all walks of life drew on royal charisma to advance their individual aims in effect working towards the monarchy. Naldi's sociological analysis of urban space reveals how buildings and spaces have been constructed for political and economic ends, particularly to shore up the monarchy. For several decades the architecture in central Bangkok has helped protect the charisma of the monarchy, which dominates landholdings and investments in the area. Because the sacred aura of the royal family legitimized capitalist expansion and consumerism, it was defended and enhanced by those Bangkokians who profited from it. Yet politically and geographically marginalized Thais failed to benefit from this royalist-led capitalist development and eventually found a new leader, business tycoon cum politician Thaksin Shinawatra. When Thaksin's followers turned against royal charisma and attacked the architecture that represented and supported it, movement away from royal charismatic authority became a real possibility for the first time. By combining sociology, political science, architecture and anthropology, *Working towards the Monarchy* offers a unique interdisciplinary approach. It will interest scholars and generalists alike, particularly those involved in the comparative study of monarchies.

Transport in Britain Philip Bagwell, Peter J. Lyth, 2002-01-01. British transport 1750-2000. *The Hump* John D. Plating, 2011-02-08. Chronicling the most ambitious airlift in history, carried out over arguably the world's most rugged terrain in its most inhospitable weather system and under the constant threat of enemy attack, the trans-Himalayan airlift of World War II delivered nearly 740,000 tons of cargo to China, making it possible for Chinese forces to wage war against Japan. This operation dwarfed the supply delivery by land over the Burma and Ledo Roads and represented the fullest expression of the U.S. government's commitment to China. In this groundbreaking work, the first concentrated historical study of the world's first sustained combat airlift operation, John D. Plating argues that the Hump airlift was initially undertaken to serve as a display of American support for its Chinese ally, which had been at war with Japan since 1937. However, by 1944, with the airlift's capability gaining momentum, American strategists shifted the purpose of air operations to focus on supplying American forces in China in preparation for the U.S.'s final assault on Japan. From the standpoint of war materiel, the airlift was the precondition that made possible all other allied military action in the China-Burma-India theater, where Allied troops were most commonly inserted, supplied and extracted by air. Drawing on extensive research that includes Chinese and Japanese archives, Plating tells a spellbinding story in a context that relates it to the larger movements of the war and reveals its significance in terms of the development of military air power. *The Hump* demonstrates the operation's far-reaching legacy as it became the example and prototype of the Berlin Airlift, the first air

battle of the Cold War The Hump operation also bore significantly on the initial moves of the Chinese Civil War when Air Transport Command aircraft moved entire armies of Nationalist troops hundreds of miles in mere days in order to prevent Communist forces from being the ones to accept the Japanese surrender

covers the significant challenges and developments in air transportation for each of four chronological periods starting with how and why aviation came to play an important role in international politics and economic relations. He follows with an examination of how improvements in technology influenced existing concepts of distance, created new travel patterns, and what effect the growth in numbers of passenger and cargo had on air transportation. Finally, Dierikx looks at how airlines have become increasingly detached from national interests and state control, concluding with an overview of the current state of air travel and a description of the role air transportation has played in the creation of a global society. **Special**

Bibliography Series, 1957. Reconsidering a Century of Flight. Roger D. Launius, Janet R. Daly Bednarek, 2015-12-01. On December 17, 1903, Orville and Wilbur Wright soared into history during a twelve-second flight on a secluded North Carolina beach. Commemorating the 100th anniversary of the first flight, these essays chart the central role that aviation played in twentieth-century history and capture the spirit of innovation and adventure that has characterized the history of flight. The contributors, all leading aerospace historians, consider four broad themes relating to the development of flight technology: innovation and the technology of flight; civil aeronautics and government policy; aerial warfare; and aviation in the American imagination. Through their attention to the political, economic, military, and cultural history of flight, the authors establish that the Wrights' invention and all that followed in both air and space was one of the most significant technologies of the twentieth century, fundamentally reshaping our world. Supported by the First Flight Centennial Commission, the contributors are Janet R. Daly Bednarek, Tami Davis Biddle, Roger E. Bilstein, Hans Joachim Braun, David T. Courtwright, Anne Collins Goodyear, Roger D. Launius, William M. Leary, David D. Lee, W. David Lewis, John H. Morrow, Dominick A. Pisano, and A. Timothy Warnock.
