INTRODUCTION

At some levels, single-entity electrochemistry (SEE) is enigmatic. First defined at a Royal Society of Chemistry Faraday Discussion in 2016,^{1–3} SEE encompasses a broad range of studies that are linked by underlying concepts, principles, and experimental/theoretical challenges that can include low current, high speed, and statistical treatments of electrochemical signals that originate from a single “thing”, that “thing” being a single nanoparticle, protein, or cell, etc. Since the inception of the general concept, the field has expanded and grown to studies beyond the original descriptions, often as technology and methods applicable to SEE have grown.^{4–10} SEE has proven to be especially timely, as methods are often well-matched to advances in data-driven approaches like machine learning (ML) and artificial intelligence.

In this Review, we highlight selected examples from the SEE community with an emphasis on results in the last two years. Examples are classified based on technique or approach and include purely electrochemical examples, as well as opto-electrochemical examples. Additional considerations related to sample preparation, which proves to be critical for SEE, are also highlighted. Future prospects are considered as well, in context of where the field resides today.

NANOELECTRODES FOR SINGLE-ENTITY ELECTROCHEMISTRY

The most straightforward SEE measurement consists of a single electrode employed to measure a single entity.

Physical and Analytical Electrochemistry (General) - 215th ECS Meeting P. Trulove, 2009-11 The papers included in this issue of ECS Transactions were originally presented in the symposium Physical and Analytical Electrochemistry General Session held during the 215th meeting of The Electrochemical Society in San Francisco CA from May 24 to 29 2009

Comprehensive Treatise of Electrochemistry Peter Horsman, Brian E. Conway, E. Yeager, 2013-11-11 1 1 Definition of Terms Thrombosis Thromboembolic Disease Atherosclerosis and Blood Clotting The terms heart attack or myocardial infarction are more commonly used than thrombosis The infarct muscle destruction is simply the end result and thrombosis is the real cause of the heart attack Thrombosis may be defined as the process of formation of a coalescent or agglutinated solid mass of blood components in the blood stream Thrombi formed in either arteries or veins often cause occlusion in the vascular system and prevent blood flow Obstruction to the blood vessel usually occurs at the site where the thrombi deposit Furthermore thrombi may break loose travel through the circulating blood stream and cause obstruction at some distal point of narrowing elsewhere The mass or thrombus that moves is referred to as an embolus The two phenomena are lumped together under the term thromboembolic disease Thrombosis that reduces blood supply to the heart is the primary factor in heart attacks **Comprehensive Treatise of Electrochemistry: Bioelectrochemistry** John O'M.
