*New Advances in Genetic Studies to Understand Yeast Adaptation to Extreme and Fermentative Environments* Francisco A. Cubillos, Amparo Querol, Cecile Fairhead, Roberto Nespolo, Roberto Pérez-Torrado, 2021-04-30      *Non-conventional Yeasts: from Basic Research to Application* Andriy Sibirny, 2019-08-12 This volume scopes several aspects of non conventional yeast research prepared by the leading specialists in the field An introduction on taxonomy and systematics enhances the reader s knowledge on yeasts beyond established ones such as *Saccharomyces cerevisiae* Biotechnological approaches that involve fungal utilization of unusual substrates production of biofuels and useful chemicals as citric acid glutathione or erythritol are discussed Further strategies for metabolic engineering based on knowledge on regulation of gene expression as well as sensing and signaling pathways are presented The book targets researchers and advanced students working in Microbiology Microbial Biotechnology and Biochemistry      *Molecular Mechanisms and Physiological Significance of Organelle Interactions and Cooperation* Michael Schrader, Markus Islinger, 2017-02-28 Eukaryotic cells contain distinct membrane bound organelles which compartmentalise cellular proteins to fulfil a variety of vital functions Many organelles have long been regarded as isolated and static entities e g peroxisomes mitochondria lipid droplets but it is now evident that they display dynamic changes interact with each other share certain proteins and show metabolic cooperation and cross talk Despite great advances in the identification and characterisation of essential components and molecular mechanisms associated with the biogenesis and function of organelles information on how organelles interact and are incorporated into metabolic pathways and signaling networks is just beginning to emerge Organelle cooperation requires sophisticated targeting systems which regulate the proper distribution of shared proteins to more than one organelle Organelle motility and membrane remodeling support organelle interaction and contact This contact can be mediated by membrane proteins residing on different organelles which can serve as molecular tethers to physically link different organelles together They can also contribute to the exchange of metabolites and ions or act in the assembly of signaling platforms In this regard organelle communication events have been associated with important cellular functions such as apoptosis antiviral defense organelle division biogenesis ROS metabolism and signaling and various metabolic pathways such as breakdown of fatty acids or cholesterol biosynthesis In this research topic we will focus on recent novel findings on the underlying molecular mechanisms and physiological significance of organelle interaction and cooperation with a particular focus on mitochondria peroxisomes endoplasmic reticulum lysosomes and lipid droplets and their impact on the regulation of cellular homeostasis Our understanding of how organelles physically interact and use cellular signaling systems to coordinate functional networks between each other is still in its infancy Nevertheless recent discoveries of defined membrane structures such as the mitochondria ER associated membranes MAM are revealing how membrane domains enriched in specific proteins transmit signals across organelle boundaries allowing one organelle to influence the function of another In addition to its role as a

mediator between mitochondria and the ER contacts between the MAM and peroxisomes contribute to antiviral signaling and specialised regions of the ER are supposed to initiate peroxisome biogenesis whereas intimate contacts between peroxisomes lipid droplets and the ER mediate lipid metabolism In line with these observations it is tempting to speculate that further physical contact sites between other organelles exist Alternatively novel regulated vesicle trafficking pathways between organelles e g mitochondria to peroxisomes or lysosomes have been discovered implying another mode of organelle communication Identifying the key molecular players of such specialised membrane structures will be a prerequisite to understand how organelle communication is physically accomplished and will lead to the identification of new regulatory networks In addition to the direct transmission of interorganellar information cytosolic messenger systems e g kinase phosphatase systems or redox signaling may contribute to the coordination of organelle functions This research topic will integrate new findings from both modes of communication and will provide new perspectives for the functional significance of cross talk among organelles We would like to thank all the researchers who contributed their valuable work to this research topic Furthermore we are grateful to the reviewers and Associate Editors who contributed valuable comments and positive criticism to improve the contributions

*Current Research Topics in Applied Microbiology and Microbial Biotechnology* Antonio Mendez-Vilas, 2009 This book contains a compilation of papers presented at the II International Conference on Environmental, Industrial, and Applied Microbiology BioMicroWorld2007 held in Seville, Spain, on 28 November-1 December 2007, where over 550 researchers from about 60 countries attended and presented their cutting edge research. The main goals of this book are to 1) identify new approaches and research opportunities in applied microbiology, presenting works that link microbiology with research areas usually related to other scientific and engineering disciplines, and 2) communicate current research priorities and progress in the field. The contents of this book mirror this focus. Microbiologists interested in environmental, industrial, and applied

microbiology and in general scientists whose research fields are related to applied microbiology can find an overview of the current state of the art in the topic. In addition to the more general topic, some chapters are devoted to specific branches of microbiology research such as bioremediation, biosurfactants, microbial factories, biotechnologically relevant enzymes and proteins, microbial physiology, metabolism, and gene expression, and future bioindustries.
