**Successful Software Reengineering** Valenti, Salvatore, 2001-07-01 Software process reengineering has become highly visible over the past several years. Efforts are being undertaken by organizations of all types and sizes as they attempt to deal with the challenges of quality, complexity, and competitiveness. As an emerging technology, the effectiveness and potential impact of process improvement efforts have been debated but not fully tested or validated. At the very core of this technological evolution is the idea that the quality of a software product is highly dependent on the quality of the process used for its development. *Successful Software Reengineering* examines the most recent theories, models, approaches, and processes involved with the concept of software improvement and reengineering. *Challenges of Information Technology Management in the 21st Century* Information Resources Management Association. International Conference, 2000. As the 21st century begins, we are faced with opportunities and challenges of available technology as well as pressured to create strategic and tactical plans for future technology. Worldwide IT professionals are sharing and trading concepts and ideas for effective IT management, and this cooperation is what leads to solid IT management practices. This volume is a collection of papers that present IT management perspectives from professionals around the world. The papers seek to offer new ideas, refine old ones, and pose interesting scenarios to help the reader develop company-sensitive management strategies.

### Research and Practical Issues of Enterprise Information Systems II Volume 2 Li Xu, A. Min Tjoa, Sohail S.

Chaudhry, 2007-12-29 Enterprise information systems (EIS) have become increasingly popular over the last 15 years. 1. 2. EIS integrate and support business processes across functional boundaries in a supply chain environment. 3. 5. In recent years, more and more enterprises worldwide have adopted EIS such as Enterprise Resource Planning (ERP) for running their businesses. Previously, information systems such as CAD, CAM, MRP, and CRM were widely used for partial functional integration within a business organization. With global operation, global supply chain, and fierce competition in place, there is a need for suitable EIS such as ERP, E-Business, or E-Commerce systems to integrate extended enterprises in a supply chain environment with the objective of achieving efficiency, competency, and competitiveness. As an example, the global economy has forced business enterprises such as Dell and Microsoft to adopt ERP in order to take the advantage of strategic alliances within a global supply chain environment. Today, not only the large companies but also the medium companies are quickly learning that a highly integrated EIS is more and more a required element of doing business. Businesses all over the world are investing billions of dollars in acquiring and implementing EIS, in particular ERP systems by SAP and Oracle. As a result, there is a growing demand for researching EIS to provide insights into challenges, issues, and solutions related to the design, implementation, and management of EIS. **Managing Globally with Information Technology** Sherif Kamel, 2003-01-01 As the world economy becomes more interdependent and competition more global, the information technology management challenges of enabling the global marketplace must be met with innovative solutions.
