

author mention the power of craft unions to preserve archaic building codes which favor on-site construction and thus their own jobs. Is that merely folklore? Still, he treats a topic which possesses both intrinsic interest and policy relevance.

*Urban Housing Markets and Residential Location*, by Henry O. Pollakowski. Lexington, MA: D.C. Heath, 1982, 141 pp. Price: \$18.95.

An empirical analysis of the determinants of residential location, this study makes use of the recently developed dechonic index concept to evaluate the various attributes of the housing bundle. A novel feature is the focus on the quantity and quality of local public services in locational choice, using a revealed preference approach. Data from the San Francisco metropolitan area are used to estimate the influence of a variety of public services on rents. Estimated as well are the influences of open space regulation (substantial) and heating fuel price changes (significant but lagged) on a sample of Seattle housing prices. Little new is discovered here and policy implications are hardly touched upon. More a collection of linked essays than an integrated treatment of its stated theme, this book could prove useful to analysts of urban policy who have some familiarity with this particular research tradition.

*Advanced Industrialization and the Inner City*, edited by Gail Garfield Schwartz. Lexington, MA: Lexington Books, 1981, 173 pp. Price: \$19.95.

This book is simple in concept and simplistic in substance. Three long chapters are devoted to problems of the "inner cities" and the policies governments have devised to deal with them in the United Kingdom, the United States, and West Germany. In treating problems the chapters are largely descriptive (except for the one on Britain in which hardly a number appears) rather than analytic, and they convey little that is not already known to an educated reader. However, each does contain a well-organized and valuable review of central government urban policies.

*Anthony H. Pascal is a Senior Economist at the Rand Corporation.*

*The Inner City in Context. The Final Report of the Social Science Research Council Inner Cities Working Party*, edited by Peter Hall. London: Heinemann Educational Books, 1981, 175 pp. Price: \$10.00.

This report is a tightly structured synthesis of the previously published 11 separate reports of this team. Britain's cities are set in the context of inner city problems and policies elsewhere, especially the United States. The authors are skeptical about the inner city as a primary research focus—unemployment and population decline exist elsewhere, too—but consider it essential to retain a spatially based approach. There is a bibliography.
