McCoy,Andrew R. Sanderford,2015-06-01 Businesses consumers industry groups and governments understand the importance of innovation

and the innovation process for continued economic success and improvements in quality of life However innovation remains an opaque topic A paradox exists in housing at large using innovation is vital yet accounting for the value to individual organizations remains a challenge This paradox is supported by a landscape that includes a sizeable graveyard of failed attempts at innovation on grand and small scales This book seeks to decrease the opacity of innovation processes in residential construction and housing Along with the next book in the collection this book addresses key questions pertinent to the potential for widespread diffusion of green buildings and for improvements in community sustainability The overarching purpose of this book is to provide context and foundation for later books in the collection and to assist readers in peeling back the complex layers of innovation in housing and residential construction Techniques ,2009 Making education and career connections Design and Construction Rick Best, Gerard de Valence, 2007-06-01 The design and construction of buildings is a lengthy and expensive process and those who commission buildings are continually looking for ways to improve the efficiency of the process In this book the second in the Building in Value series a broad range of topics related to the processes of design and construction are explored by an international group of experts The overall aim of the book is to look at ways that clients can improve the value for money outcomes of their decisions to construct buildings The book is aimed at students studying in many areas related to the construction industry including architecture construction management civil engineering and quantity surveying and should also be of interest to many in the industry including project managers property developers building contractors and cost engineers Management of Legionella in Water Systems National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division on Earth and Life Studies, Board on Population Health and Public Health Practice, Board on Life Sciences, Water Science and Technology Board, Committee on Management of Legionella in Water Systems, 2020-02-20 Legionnaires disease a pneumonia caused by the Legionella bacterium is the leading cause of reported waterborne disease outbreaks in the United States Legionella occur naturally in water from many different environmental sources but grow rapidly in the warm stagnant conditions that can be found in engineered water systems such as cooling towers building plumbing and hot tubs Humans are primarily exposed to Legionella through inhalation of contaminated aerosols into the respiratory system Legionnaires disease can be fatal with between 3 and 33 percent of Legionella infections leading to death and studies show the incidence of Legionnaires disease in the United States increased five fold from 2000 to 2017 Management of Legionella in Water Systems reviews the state of science on Legionella contamination of water systems specifically the ecology and diagnosis This report explores the process of transmission via water systems quantification prevention and control and policy and training issues that affect the incidence of Legionnaires disease It also analyzes existing knowledge gaps and recommends research priorities moving forward Directory of Business Information Resources Laura Mars-Proietti, 2008 Pennsylvania Township News ,2010
 Resilient Water Management Strategies in Urban Settings Tamim Younos, Juneseok Lee, Tammy E. Parece, 2022-03-11

This book documents innovative approaches for integrating green technologies and decentralized water infrastructure. The two major components of green decentralized water infrastructure are 1) using locally available alternative water sources (rainwater, greywater, and brackish saltwater) at multiple scales (e.g., a single building to a neighborhood/community level) and 2) using renewable energy resources (solar, wind, biomass, geothermal, etc.). Chapter 1 introduces the concept and framework of green decentralized water infrastructure. The subsequent nine chapters give a detailed description of global case studies and discuss significant components of the green decentralized water infrastructure and the challenges. The chapters document global case studies and prospects (chapters 1-7) followed by challenges facing decentralized water infrastructure (chapters 8-10). The book will provide a cross-disciplinary knowledge base for smart/futuristic water management in urban settings and a significant opportunity for sharing smart and decentralized water technologies at the global level.

People's desire to understand the environments in which they live is a natural one. People spend most of their time in spaces and structures designed, built, and managed by humans, and it is estimated that people in developed countries now spend 90 percent of their lives indoors. As people move from homes to workplaces, traveling in cars and on transit systems, microorganisms are continually with and around them. The human-associated microbes that are shed along with the human behaviors that affect their transport and removal make significant contributions to the diversity of the indoor microbiome. The characteristics of healthy indoor environments cannot yet be defined, nor do microbial clinicians and building researchers yet understand how to modify features of indoor environments such as building ventilation systems and the chemistry of building materials in ways that would have predictable impacts on microbial communities to promote health and prevent disease. The factors that affect the environments within buildings, the ways in which building characteristics influence the composition and function of indoor microbial communities, and the ways in which these microbial communities relate to human health and well-being are extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial biology and ecology, chemistry, building science, and human physiology. This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the ecosystem of built environments, indoor microbiomes, and effects on human health and well-being. It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions.

You Bet Your Life: Your Guide to Deadly Risk Sheila Buff, Joe Buff, 2022-08-09

The gritty and granular truth behind the wagers we make with our lives every single day, and if we're unlucky, just once in a lifetime.

What are your chances of living through the next 24 hours This week This month This decade Will your job kill you Your car kill you Your spouse kill you Will your own bad habits kill you Or will a rogue asteroid just kill us all Each time you lay your head on the pillow at night or set your feet on the floor come morning you bet your life Exactly what odds do you face 24 7 You Bet Your Life applies to you the individual the analytical approach insurance companies use to calculate risk actuarial science The result is a comprehensive encyclopedic real world assessment of more than 1 000 of the risks we take every day of our all too finite lives from boarding an airplane to tempting a shark attack by dipping a toe in the ocean You Bet Your Life is introduced by an authoritative essay explaining how professional actuaries calculate risk and how less objective entities in government finance science technology and religion apply their own competing calculi of risk and reward *Using Graywater and Stormwater to Enhance Local Water Supplies* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Committee on the Beneficial Use of Graywater and Stormwater: An Assessment of Risks, Costs, and Benefits, 2016-06-30 Chronic and episodic water shortages are becoming common in many regions of the United States and population growth in water scarce regions further compounds the challenges Increasingly alternative water sources such as graywater untreated wastewater that does not include water from the toilet but generally includes water from bathroom sinks showers bathtubs clothes washers and laundry sinks and stormwater water from rainfall or snow that can be measured downstream in a pipe culvert or stream shortly after the precipitation event are being viewed as resources to supplement scarce water supplies rather than as waste to be discharged as rapidly as possible Graywater and stormwater can serve a range of non potable uses including irrigation toilet flushing washing and cooling although treatment may be needed Stormwater may also be used to recharge groundwater which may ultimately be tapped for potable use In addition to providing additional sources of local water supply harvesting stormwater has many potential benefits including energy savings pollution prevention and reducing the impacts of urban development on urban streams Similarly the reuse of graywater can enhance water supply reliability and extend the capacity of existing wastewater systems in growing cities Despite the benefits of using local alternative water sources to address water demands many questions remain that have limited the broader application of graywater and stormwater capture and use In particular limited information is available on the costs benefits and risks of these projects and beyond the simplest applications many state and local public health agencies have not developed regulatory frameworks for full use of these local water resources To address these issues *Using Graywater and Stormwater to Enhance Local Water Supplies* analyzes the risks costs and benefits on various uses of graywater and stormwater This report examines technical economic regulatory and social issues associated with graywater and stormwater capture for a range of uses including non potable urban uses irrigation and groundwater recharge *Using Graywater and Stormwater to Enhance Local Water Supplies* considers the quality and suitability of water for reuse treatment and storage technologies and human health and

environmental risks of water reuse The findings and recommendations of this report will be valuable for water managers citizens of states under a current drought and local and state health and environmental agencies Developing the Circular Water Economy Robert C. Brears,2019-11-22 This book presents new research on policy innovations that promote the development of the circular water economy In contrast to the linear economy the circular water economy promotes the reduction of water consumption reuse of water and recovery of resources from wastewater to not only increase resilience to climate change but also to reduce greenhouse gas emissions resulting from the provision of water and wastewater related services Providing a series of in depth case studies of important locations in differing climates around the globe that have implemented a variety of policy innovations to develop the circular water economy this book is a valuable resource for water and resource conservation managers policymakers international companies and organisations interested in the circular economy environmental NGOs researchers as well as graduate and undergraduate students Systematically reviews policy innovations to develop the circular water economy Illustrates how leading locations from around the world have developed the circular water economy to increase resilience to climate change while reducing emissions Provides best practices for other locations around the world aiming to implement the circular water economy
