Resource Of War

Cynthia J. Arnson, I. William Zartman

Resource Of War:

Resource Wars Michael Klare, 2002 Klare argues that wars in the near future will be fought over the control of dwindling natural resources like oil and water

A Dynamic Theory of Resource War Daron Acemoglu, Mikhail Golosov, Aleh Tsyvinski, Pierre Yared, Massachusetts Institute of Technology. Department of Economics, 2010 We develop a dynamic theory of resource wars and study the conditions under which such wars can be prevented The interaction between the scarcity of resources and the incentives for war in the presence of limited commitment is at the center of our theory We show that a key parameter determining the incentives for war is the elasticity of demand Our first result identifies a novel externality that can precipitate war price taking firms fail to internalize the impact of their extraction on military action In the case of inelastic resource demand war incentives increase over time and war may become inevitable Our second result shows that in some situations regulation of prices and quantities by the resource rich country can prevent war and when this is the case there will also be intertemporal distortions In particular resource extraction will tend to be slower than that prescribed by the Hotelling rule which is the rate of extraction in the competitive environment Our third result is that due to limited commitment such regulation can also precipitate war in some circumstances in which war is avoided in the competitive environment Trade International Conflicts War Exhaustible Resources JEL Classifications F10 F51 H56 Q32

The Anatomy of Resource Wars Michael Renner, Thomas Prugh, Worldwatch Institute, 2002

Rethinking the Economics of War Cynthia J. Arnson, I. William Zartman, 2005-10-12 This collection of essays questions the adequacy of explaining today's internal armed conflicts purely in terms of economic factors and re-establishes the importance of identity and grievances in creating and sustaining such wars Countries studied include Lebanon Angola Colombia and Afghanistan

Rebel Economies Nicola Di Cosmo, Didier Fassin, Clémence Pinaud, 2021-05-18 As a pervasive occurrence in the contemporary world wars and their economic sources are defining social and political processes in a variety of national and transnational contexts Rebel Economies Warlords Insurgents Humanitarians explores historical anthropological and political dimensions of war economies by non state actors across different periods and regions while presenting their multiple manifestations as a unified congruent phenomenon Through a variety of conceptual and disciplinary approaches the authors investigate in the past and present and across three continents the nexuses between economy war social transformation and state building revealing in the process differences and similarities that would otherwise remain hidden Through this broad gauge approach the book aims first to rethink much of the debate around non state war economies and secondly to expand the conversation by consciously treating this theme as a conspicuous and distinct aspect of both economy and war This is not just a different approach but a fundamental departure from the ways in which current discussions over the economy of wars civil conflicts and revolutions have informed research orientations over several decades

War Technology Aiden Feynman, AI, 2025-02-17 War Technology explores the intricate relationship between technological innovation and military history revealing how

advancements have consistently reshaped warfare It examines the evolution of weaponry from gunpowder's initial impact to the rise of artificial intelligence emphasizing that technological superiority alone doesn't guarantee victory The book uniquely highlights how human ingenuity and strategic thinking adapt to and often mitigate the impact of new weapons showcasing that the human element remains crucial in warfare This study emphasizes the interplay between military technology and societal change analyzing the development and deployment of specific technologies in war For instance the industrial revolution spawned machine guns and armored vehicles drastically influencing military strategy It progresses chronologically beginning with gunpowder's revolutionary impact on siege warfare then moves through the industrial revolution and dedicates significant attention to 20th and 21st century developments like nuclear weapons and cyber warfare **The**

Anatomy of Resource Wars Michael Renner, 2002 Governments rebels and warlords have made billions of dollars by selling conflict commodities and have used the money to arm themselves and line their own pockets But the cost of these conflicts has been extraordinary more than 5 million people killed during the 1990s as many as 20 million driven from their homes and considerable environmental destruction Renner assesses the anatomy of resource wars examines a number of specific cases and discusses efforts to break the link between resources and conflict **Why War** Simon Stander, 2014-02-27 This

groundbreaking survey explains why war remains predominant in today's world by showing how the spread of nationalism and capitalism has brought about modern warfare It argues that the key explanation for modern conflict which is characterized by violent conflicts between nation states civil war and wars over resources rests in the dialectical relationship between nation states and capitalist modes of production where nations have finite boundaries that capitalism seek to transcend in search of increased profits Discussing issues such as globalization global capitalism North and Latin American continental policies the nature of democracy decolonization and technology and military industrial complexes this unique work challenges common approaches to international relations and peace studies This innovative accessible work provides new insights into the causes and nature of modern war that will appeal to any student concerned with peace and violent conflict within the various fields of international relations political economy peace studies and more **International Law**

and the War with Islamic State Saeed Bagheri, 2021-07-15 Armed non state actors ANSAs often have economic aims that international law needs to respond to This book looks at the aim of Islamic State to create an effective government with an economically independent regime which focused on key oilfields in Syria and Iraq Having addressed Islamic State's quest for energy resources in Iraq and Syria the book explores the lawfulness of the war with Islamic State from a variety of legal aspects It has been attempted to make inroads into the most controversial aspects of contradictions in the application of jus ad bellum and jus in bello particularly when discussing the use of extraterritorial armed force against ANSAs and the obligation to protect civilian objects including the natural environment The question is whether the targeting of energy resources should be regarded as a violation of the laws of armed conflict even though the war with Islamic State being

classified as a non international armed conflict Ambitious in scope the study argues that legal theory and state practice are still problematic as to how and under what conditions states can justify resorting to military force in foreign territory and to what extent they can target natural resources as being part of state property Furthermore it goes on to examine the differences between international and non international armed conflicts to establish whether there is any difference in the targeting of energy resources as part of the war sustaining capabilities of either party Through an examination of the Islamic State case the book offers a comprehensive study to close the gaps in jus in bello by contextualising the questions of civilian protection victimisation and state responsibility by evaluating the US s war sustaining theory as a justification for the destruction of a territorial state s natural resources that are occupied by ANSAs

Côte D'Ivoire Ley G. Ikpo,2015-09-16

The end of the twentieth century which was marked by multiparty democracy in Eastern European entities and Third World countries moved Cte dIvoire to adhere to the new democratization system in 1990 Nine years later the territory registered its first bloodless state coup On September 19 2002 the country was shared into two parts with human losses and damages when President Gbagbo was on official visit to Italy After different attempts in negotiations Linas Marcoussis 2003 Pretoria agreement 2005 and the Political Agreement of Ouagadougou 2007 for some protagonists international organizations and NGOs the perfect conflict resolution was about running elections so that the former peaceful land could regain its image of a prosperous and stable country The elections that were delayed six times came to pass and two presidents came out of the scrutiny Gbagbo was proclaimed victorious by the Ivorian Constitutional Council while Ouattara was acknowledged by the Independent Electoral Commission Once more the country fell into a postelection crisis Meanwhile the African Union the European Union the USA the French Licorne and the United Nations urged President Gbagbo to step down since Ouattara was considered the happy

winner of the scrutiny The refusal of Gbagbo cost human losses and led to his arrest on April 11 2011 Nowadays the country is not unified and reconciled but it will have the 2015 elections

Global Resource Scarcity Marcelle C. Dawson,Christopher Rosin,Nave Wald,2017-11-02 A common perception of global resource scarcity holds that it is inevitably a catalyst for conflict among nations yet paradoxically incidents of such scarcity underlie some of the most important examples of international cooperation This volume examines the wider potential for the experience of scarcity to promote cooperation in international relations and diplomacy beyond the traditional bounds of the interests of competitive nation states The interdisciplinary background of the book s contributors shifts the focus of the analysis beyond narrow theoretical treatments of international relations and resource diplomacy to broader examinations of the practicalities of cooperation in the context of competition and scarcity Combining the insights of a range of social scientists with those of experts in the natural and bio sciences many of whom work as resource practitioners outside the context of universities the book works through the tensions between thinking theory and doing practice which so often plague the process of social change These encounters with scarcity draw attention away from the myopic focus on market forces and allocation and encourage us to recognise more fully the social nature of the tensions and opportunities that are associated with our shared dependence on resources that are not readily accessible to all The book brings together experts on theorising scarcity and those on the scarcity of specific resources It begins with a theoretical reframing of both the contested concept of scarcity and the underlying dynamics of resource diplomacy The authors then outline the current tensions around resource scarcity or degradation and examine existing progress towards cooperative international management of resources These include food and water scarcity mineral exploration and exploitation of the oceans Overall the contributors propose a more hopeful and positive engagement among the world s nations as they pursue the economic and social benefits derived from natural resources while maintaining the ecological processes on which they depend
