Respiratory Metabolism In Plants:

Respiratory Metabolism in Plants Harry Beevers, 1961 **Plant Respiration** Hans Lambers, Univ. de les Illes Balears, 2006-03-30 Respiration in plants as in all living organisms is essential to provide metabolic energy and carbon skeletons for growth and maintenance As such respiration is an essential component of a plant's carbon budget Depending on species and environmental conditions it consumes 25-75% of all the carbohydrates produced in photosynthesis even more at extremely slow growth rates Respiration in plants can also proceed in a manner that produces neither metabolic energy nor carbon skeletons but heat This type of respiration involves the cyanide resistant alternative oxidase it is unique to plants and resides in the mitochondria The activity of this alternative pathway can be measured based on a difference in fractionation of oxygen isotopes between the cytochrome and the alternative oxidase Heat production is important in some flowers to attract pollinators however the alternative oxidase also plays a major role in leaves and roots of most plants A common thread throughout this volume is to link respiration including alternative oxidase activity to plant functioning in different environments *Plant Respiration: Metabolic Fluxes and Carbon Balance* Guillaume Tcherkez, Jaleh Ghoshghaie, 2018-02-20 There are currently intense efforts devoted to understand plant respiration from genes to ecosystems and its regulatory mechanisms this is because respiratory CO₂ production represents a substantial carbon loss in crops and in natural ecosystems Thus in addition to manipulating photosynthesis to increase plant biomass production minimization of respiratory loss should be considered in plant science and engineering However respiratory metabolic pathways are at the heart of energy and carbon skeleton production and therefore it is an essential component of carbon metabolism sustaining key processes such as photosynthesis The overall goal of this book is to provide an insight in such interactions as well as an up to date view on respiratory metabolism taking advantage of recent advances and concepts from fluxomics to natural isotopic signal of plant CO₂ efflux It is thus a nonoverlapping complement to Volume 18 in this series *Plant Respiration From Cell to Ecosystem* which mostly deals with mitochondrial electron fluxes and plant scale respiratory losses **Alternative Respiratory Pathways in Higher Plants** Kapuganti Jagadis Gupta, Luis A. J. Mur, Bhagyalakshmi Neelwarne, 2015-05-07 Rapid developments in molecular and systems biology techniques have allowed researchers to unravel many new mechanisms through which plant cells switch over to alternative respiratory pathways This book is a unique compendium of how and why higher plants evolved alternative respiratory metabolism It offers a comprehensive review of current research in the biochemistry physiology classification and regulation of plant alternative respiratory pathways from alternative oxidase diversity to functional marker development The resource provides a broad range of perspectives on the applications of plant respiratory physiology and suggests brand new areas of research Other key features written by an international team of reputed plant physiologists known for their pioneering contributions to the knowledge of regular and alternative respiratory metabolism in higher plants includes step by step protocols for key molecular and imaging techniques advises on regulatory

options for managing crop yields food quality and environment for crop improvement and enhanced food security covers special pathways which are of key relevance in agriculture particularly in plant post harvest commodities Primarily for plant physiologists and plant biologists this authoritative compendium will also be of great value to postdoctoral researchers working on plant respiration as well as to graduate and postgraduate students and university staff in Plant Science It is a useful resource for corporate and private firms involved in developing functional markers for breeding programs and controlling respiration for the prevention of post harvest losses in fruit vegetables cut flowers and tubers **Respiratory**

Metabolism in Plants Beevers H.,1989 **Analytic Studies in Plant Respiration , Plant Physiology** Hans

Mohr,Peter Schopfer,1995-01-23 In this comprehensive and stimulating text and reference the authors have succeeded in combining experimental data with current hypotheses and theories to explain the complex physiological functions of plants For every student teacher and researcher in the plant sciences it offers a solid basis for an in depth understanding of the entire subject area underpinning up to date research in plant physiology The authors vividly explain current research by references to experiments they cite original literature in figures and tables and at the end of each chapter list recent references that are relevant for a deeper analysis of the topic In addition an abundance of detailed and informative illustrations complement the text *The Biochemistry of Plants: Metabolism and respiration* Paul Karl Stumpf,Eric E.

Conn,1980 **Analytic Studies in Plant Respiration** Frederick Frost Blackman,2013-08 Originally published in 1954 this collection of the posthumous papers of the eminent plant physiologist Frederick Frost Blackman includes six papers that were unpublished at the time of his death all of which address the topic of plant respiration The data was collected over the course of one year from experiments performed on the effect of oxygen on the respiration of apples and the text begins with an introduction by the noted botanist George Edward Briggs This book will be of value to anyone interested in Blackman s work or in the history of botany and plant physiology *The Biochemistry of Plants: Metabolism and respiration* ,1980

Moore,2013-11-11 Eight years have elapsed since the first International Meeting on Plant Mitochondria was held in
Marseilles Since this date numerous important developments have occurred within the field and hence a further conference
on this fundamental area of research was considered well overdue This volume summarises the lecture and poster sessions of
the second International Meeting on Plant Mitochondria held in Aberystwyth July 20 24th 1986 The meeting was held not
only to bring together plant scientists interested in the bioenergetics of plant mitochondria but also those who are interested
in the regulatory role of mitochondria in plant growth and respiration A further important aspect of this conference was to
introduce plant physiologists and biochemists to the plant molecular biologists in an attempt to not only discuss problems of
mutual interest but to also learn much more about the real questions which the biochemists and physiologists wish to answer
Hopefully the volume reflects much of the current excitement and advances being made in the field Although many of the
participants of the first meeting were present the expertise of Walter Bonner Jack Hanson and Gaston Ducet to name but a
few was sorely missed The conference consisted of forty five minute review lectures followed by thirty minute research
lectures the summaries of which are found in the longer articles The meeting was divided into four seSSions namely
organisation of the electron transport chain mitochondrial interactions mitochondrial biogenesis and plant growth and
development **Nutrient Use Efficiency of Plants under Abiotic Stress** Bowen Liang,Tuanhui Bai,Chao Li,Ping
