Restriction And Saturation Linguistic Inquiry Monographs:

Restriction and Saturation Sandra Chung, William A. Ladusaw, 2003-10-24 With this study of Maori and Chamorro Sandra Chung and William Ladusaw make a valuable contribution to the growing literature on the formal semantic analysis of non Indo European languages Their ultimate focus is on how the study of these Austronesian languages can illuminate the alternatives for semantic interpretation and their interaction with syntactic structure Revisiting the analysis of indefiniteness in terms of restricted free variables they claim that some varieties of indefinites are better analyzed by taking restriction and saturation to be fundamental semantic operations Chapters examine the general topic of modes of composition including predicate restriction and syntactic versus semantic saturation types of indefinite determiners in Maori and object incorporation in Chamorro including discussions of the extra object and restriction without saturation The authors goal is that the two case studies they offer and their larger focus on modes of composition will contribute to a broader account of the interaction of form position and semantic interpretation *Papers of the Forty-Second Algonquian Conference* J. Randolph

Valentine, Monica Macaulay, 2014-04-01 Papers of the forty second Algonquian Conference held at Memorial University of Newfoundland in October 2010 The papers of the Algonquian Conference have long served as the primary source of peer reviewed scholarship addressing topics related to the languages and societies of Algonquian peoples Contributions which are peer reviewed submissions presented at the annual conference represent an assortment of humanities and social science disciplines including archeology cultural anthropology history ethnohistory linguistics literary studies Native studies social work film and countless others Both theoretical and descriptive approaches are welcomed and submissions often provide previously unpublished data from historical and contemporary sources or novel theoretical insights based on firsthand research The research is commonly interdisciplinary in scope and the papers are filled with contributions presenting fresh research from a broad array of researchers and writers These papers are essential reading for those interested in Algonquian world views cultures history and languages They build bridges among a large international group of people who write in different disciplines Scholars in linguistics anthropology history education and other fields are brought together in one vital community thanks to these publications **Interdisciplinary Perspectives on Vietnamese Linguistics** Nigel

Duffield, Trang Phan, Tue Trinh, 2019-10-09 This volume was originally inspired by a 2017 conference to honour the scholar and linguist Cao Xu n Ha o whose landmark work in many diverse areas of language study established a bridge between traditional Vietnamese scholarship and contemporary theories of grammatical organisation The book offers the reader a closely edited collection of papers representing a wide spectrum of frameworks approaches and methods from traditional fieldwork studies of non standard dialects to corpus based discussions of language and gender to formal syntactic and semantic analyses of key functional morphemes to laboratory experiments and work in first language acquisition Many of the papers present detailed analyses of original data as well as novel treatments of established facts considered together as well

as in contrast to one another they make a significant empirical contribution to our understanding of how Vietnamese is structured acquired and put to use The papers should be of value to anyone interested in contemporary approaches to Vietnamese linguistics and Southeast Asian languages more generally

Event Representation in Language and Cognition Jürgen Bohnemeyer, Eric Pederson, 2010-12-23 Event Representation in Language and Cognition examines new research into how the mind deals with the experience of events Empirical research into the cognitive processes involved when people view events and talk about them is still a young field The chapters by leading experts draw on data from the description of events in spoken and signed languages first and second language acquisition co speech gesture and eye movements during language production and from non linguistic categorization and other tasks The book highlights newly found evidence for how perception thought and language constrain each other in the experience of events It will be of particular interest to linguists psychologists and philosophers as well as to anyone interested in the representation and processing of events

Pseudo-Noun Incorporation and Differential Object Marking Imke Driemel, 2023-03-07 This book provides a detailed cross linguistic study of pseudo noun incorporation a phenomenon whereby an argument forms a closer than usual relation with the verb Imke Driemel draws on data from Tamil Mongolian Korean Turkish and German and applies diagnostic tests across eleven noun types in each of the languages under consideration What emerges is a coherent effect of pseudo incorporated arguments that maps loss of case marking to obligatory narrow scope lack of binding and control relations and a potentially restricted movement pattern The book provides a unifying theory that is able to capture all properties with a single assumption pseudo incorporation effects result from noun phrases that are made up of a nominal and a verbal category feature implemented in a derivational framework the nominal feature is active early in the derivation being responsible for c selection and nominal modification while the verbal feature is active late and crucially derives the effects we have come to recognize as pseudo noun incorporation One important empirical contribution of this study stems from the observation that pseudo incorporation does not have to be the only reason for optional case marking Tamil and Korean provide evidence that only a subset of optionally case marked noun types also show a correlation with scope binding control and movement constraints This insight enforces the conclusion that the same language can make use of both pseudo noun incorporation and differential object marking

Verb Doubling and Dummy Verb Johannes Hein, 2020-06-22 This monograph provides the first cross linguistic study of repair strategies in verbal fronting verb doubling and do support addressing both typological properties and theoretical aspects First it brings together data hitherto scattered across the empirical and theoretical literature and adds newly collected data from two African languages For each of the 47 languages the properties of verbal fronting are documented in detail Based on this sample the empirical part establishes two novel typological generalizations regarding the interaction between the size of the fronted category and the type of repair strategy used The first of these identifies a systematic typological gap No language that allows both verb and verb phrase fronting has

do support with the former and verb doubling with the latter In the theoretical part it is shown that previous theories of verb doubling do support are unable to account for both generalizations A new approach within the Copy Theory of the Minimalist Framework is developed that rests on the interaction of head movement copy deletion and the properties of different movement types The book thus provides the first comprehensive empirical and theoretical overview of repair patterns in verbal fronting

Concealed Questions Ilaria Frana, 2017-02-23 This book presents a novel analysis of concealed question constructions reports of a mental attitude in which part of a sentence looks like a nominal complement e g Eve s phone number in Adam knows Eve s phone number but is interpreted as an indirect question Adam knows what Eve s phone number is Such constructions are puzzling in that they raise the question of how their meaning derives from their constituent parts In particular how a nominal complement Eve s phone number normally used to refer to an entity e g Eve s actual phone number in Adam dialled Eve s phone number ends up with a question like meaning In this book Ilaria Frana adopts a theory according to which noun phrases with concealed question meanings are analysed as individual concepts The traditional individual concept theory is modified and applied to the phenomena discussed in the recent literature and some new problematic data The end result is a fully compositional account of a wide range of concealed question constructions The exploration of concealed questions offered in the book provides insights into both issues in semantic theory such as the nature of quantification in natural languages and the use of type shifter in the grammar and issues surrounding the syntax semantics interface such as the interpretation of copy traces and the effects on semantic interpretation of different syntactic analyses of relative clauses The book will interest scholars and graduate students in linguistics especially those interested in semantics and the syntax semantics interface as well as philosophers of language working on the topic of intensionality

Experimental Insights into the Syntax of Romanian Ditransitives Alina Tigău, 2020-01-20 This book investigates the syntax of Romanian ditransitives building on new experimental data with a view to enable a more accurate understanding of these constructions regarding their underlying configuration s the structural import of Differential Object Marking or Clitic Doubling among others One first attempt is to explain the relatively free word order manifested by the two internal arguments and their symmetrical potential for anaphor and possessor binding Evidence is provided as to the relative hierarchical order of the two object DPs with the direct object as the lower one The featural make up of the two objects also proves crucial in disentangling the various experimentally uncovered aspects regarding their interaction e g differentially marked direct objects bear a Person feature and compete with the indirect object in valuing the person feature of the applicative The feature specification is further refined function of the presence of clitic doubling or the lack thereof The experimental insights we gain into the syntax of Romanian ditransitives help us integrate them with their counterparts in Romance thereby contributing to a better cross linguistic understanding of these constructions

Language George Melville Bolling, Bernard Bloch, 2004 □□□□, 2005 **Anthropological Linguistics**, 2004 *On the Syntactic*

Composition of Manner and Motion Maria Luisa Zubizarreta, Eunjeong Oh, 2007-02-09 This crosslinguistic study of the structure of motion predicates argues for the universal syntactic nature of the composition of manner and motion within the verbal constituent In serial verb languages manner and motion are overtly represented as two distinct morphosyntactic units sequentially ordered Zubizarreta and Oh argue that the same analysis into two units holds for nonserial verb languages albeit at a more abstract level They argue further that this abstract level is part of the syntactic component of the grammar The authors support their argument with a wealth of empirical data and a discussion of significant theoretical issues Unlike many books and articles that discuss the relation between constructional meaning and the lexicon *On the Syntactic Composition of Manner and Motion* examines one phenomenon in detail the articulation of manner and motion in three distinct language families Germanic Korean and Romance The authors defense of the syntactic approach to constructional meaning will be of interest to linguists and psycholinguists both inside and outside the generative tradition and to scholars of Romance Germanic and Korean languages

The Syntax of (in)dependence Kenneth J. Safir, 2004 A theory of the syntactic restrictions on dependent identity interpretations in natural language

Voice and v Julie Anne Legate, 2014-10-24 An investigation of the syntactic structure of voice and v using Acehnese Malayo Polynesian as the empirical starting point In *Voice and v* Julie Anne Legate investigates the syntactic structure of voice using Acehnese as the empirical starting point A central claim is that voice is encoded in a functional projection VoiceP which is distinct from and higher than vP Legate further claims that VoiceP may be associated with phi features that semantically restrict the external argument position but do not saturate it Through minor variations in the properties of VoiceP Legate explains a wide range of non canonical voice constructions including agent agreeing passives grammatical object passives impersonals object voice constructions and applicative voice in causatives Her analysis draws on data from a typologically diverse set of languages not only Malayo Polynesian but also Celtic Scandinavian and Slavic *Voice and v* provides a detailed investigation into the syntactic structure of an understudied Malayo Polynesian language and thereby reveals important insights for the theoretical analysis of voice and the verb phrase Moreover the work applies and broadens these insights to a range of related passive like constructions crosslinguistically *Voice and v* thus joins a handful of model volumes that enlist typological depth and breadth to further our development of modern linguistic theory

A Two-Tiered Theory of Control Idan Landau, 2015-05-22 A theory of control equally grounded in syntax and semantics that argues that obligatory control is achieved either through predication or through logophoric anchoring This book revives and reinterprets a persistent intuition running through much of the classical work that the unitary appearance of Obligatory Control into complements conceals an underlying duality of structure and mechanism Idan Landau argues that control complements divide into two types In attitude contexts control is established by logophoric anchoring while non attitude contexts it boils down to predication The distinction is also syntactically represented Logophoric complements are constructed as a second tier above predicative complements The theory derives the obligatory

de se reading of PRO as a special kind of de re attitude without ascribing any inherent feature to PRO At the same time it provides a principled explanation based on feature transmission for the agreement properties of PRO which are stipulated on competing semantic accounts Finally it derives a striking universal asymmetry the fact that agreement on the embedded verb blocks control in attitude contexts but not in non attitude contexts This book is unique in being firmly grounded in both the formal semantic and the syntactic studies of control offering an integrated view that will appeal to scholars in both areas By bringing to bear current sophisticated grammatical analyses it offers new insights into the classical problems of control theory

Architecture of the Palauan Verbal Complex Justin Nuger,2010 **Introducing Arguments** Liina

Pylkkänen,2008 This compositional theory of verbal argument structures explores how noncore arguments i e arguments that are not introduced by verbal roots themselves are introduced into argument structure and examines cross linguistic variation in introducing arguments

Asymmetry in Morphology Anna Maria Di Sciullo,2005-11-04 In this groundbreaking monograph Anna Maria Di Sciullo proposes that asymmetry the irreversibility of a pair of elements in an ordered set is a hard wired property of morphological relations Her argument that asymmetry is central in derivational morphology would if true make morphological objects regular objects of grammar just as syntactic and phonological objects are This contrasts with the traditional assumption that morphology is irregular and thus not subject to the basic hard wired regularities of form and interpretation Di Sciullo argues that the asymmetric property of morphological relations is part of the language faculty She proposes a theory of grammar Asymmetry Theory according to which generic operations have specific instantiations in parallel derivations of the computational space She posits that morphological and syntactic relations share a property asymmetry but diverge with respect to other properties of their primitives operations and interface representations Di Sciullo offers empirical support for her theory with examples from a variety of languages including English Modern Greek African Romance Turkish and Slavic

Antipassive Katarzyna Janic,Alena Witzlack-Makarevich,2021-03-15 This book provides a comprehensive treatment of the morpho syntactic and semantic aspects of the antipassive construction from synchronic diachronic and typological perspectives The nineteen contributions assembled in this volume address a wide range of aspects pertinent to the antipassive construction such as lexical semantics the properties of the antipassive markers as well as the issue of fuzzy boundaries between the antipassive construction and a range of other formally and functionally similar constructions in genealogically and areally diverse languages Purely synchronically oriented case studies are supplemented by contributions that shed light on the diachronic development of the antipassive construction and the antipassive markers The book should be of central interest to many scholars in particular to those working in the field of language typology semantics syntax and historical linguists as well as to specialists of the language families discussed in the individual contributions

Linearization of Chains and Sideward Movement Jairo Nunes,2004-04-16 This highly original

monograph treats movement operations within the Minimalist Program Jairo Nunes argues that traces are not grammatical

primitives and that their properties follow from deeper features of the system and in particular that the phonetic realization of traces is determined by linearization computations coupled with economy conditions regarding deletion. He proposes a version of the copy theory of movement according to which movement must be construed as a description of the interaction of the independent operations Copy, Merge, Form Chain, and Chain Reduction. Empirical evidence to support this claim includes instances of sideward movement between subtrees in a derivation. According to this analysis, the linearization of chains in the phonological component constrains sideward movement so that it is possible to account for standard properties of multiple gap constructions including parasitic gap and ATB constructions without construction specific operations or principles that are not independently motivated. Theoretical linguists will find Linearization of Chains and Sideward Movement of great interest both theoretically and empirically. The version of the copy theory of movement proposed by Nunes will stir debate and shape future research in the field.
