***Rethinking International Trade*** Paul R. Krugman, 1990-01-01 Over the past decade a small group of economists has challenged traditional wisdom about international trade *Rethinking International Trade* provides a coherent account of this research program and traces the key steps in an exciting new trade theory that offers among other possibilities new arguments against free trade Krugman's introduction is a valuable guide to research that has delved anew into the causes of international trade and reopened basic questions about the international pattern of specialization the effects of protectionism and what constitutes an optimal trade policy In the four sections that follow he takes a revisionary look at the causes of international trade and discusses growth and the role of history technological change and trade and strategic trade policy Essays in part I review and challenge the theories of Ricardo and his successors rethinking a 160 year tradition of looking at international trade Models are presented in which trade frequently arises because of opportunities to exploit increasing returns through exports rather than from comparative advantage In part II Krugman traces the resulting pattern of trade specialization not only to the influence of comparative advantage but also to more arbitrary factors such as historical events the ratchet effect of cumulative processes technological changes and temporary economic shocks Part III expands on the theme of technological change as a key factor in determining the pattern of specialization in international trade and addresses questions about the effects of innovation or lack of it on a country's international trade position The concluding essays examine the issue of protectionism along with other elements of trade policy showing how protectionist policies used as an export enhancement device by some national governments may shift world specialization to the advantage of the protectionist nations Paul R Krugman is Professor of Economics at MIT
