Retinoids in Clinical Practice Gideon Koren,1992-11-12 A reference text which examines all of the known risks and benefits of retinoids synthetic and natural derivations of Vitamin A This study compares them with other teratogenic drugs and discusses their clinical uses and the diseases which they are prescribed to treat *Retinoids* IARC Working Group on the Evaluation of Cancer-preventive Agents,World Health Organization,International Agency for Research on Cancer,1999 The retinoids are a class of compounds structurally related to Vitamin A In the last 30 years more than 2 500 retinoids have been synthesized and biologically tested with the objective of identifying those with an enhanced therapeutic ratio The majority have been studied for their cancer preventive activity in experimental models and some in clinical trails in humans On 24 30 March 1999 a working group of international experts met in Lyon to consider the existing evidence on the cancer preventive activity of nine retinoids judged to have sufficient human and or animal data to permit evaluation This handbook details the evidence considered and summarizes the evaluation made by the working group **National Library of**

Livrea,2012-12-06 Rapid progress has been made in our understanding of the molecular mechanisms of cell growth and oncogenesis during the past decade Special attention has been given to the presentation of the frequently neglected close correlation between changes in signal transduction and metabolic pathways during oncogenesis This book advances the knowledge of mechanisms regulating metabolism and functioning of vitamin A and offers the most recent results of research on the clinical efficiency of retinoids in skin disorders and cancer The book presents recent findings on the regulation of cell growth in normal and neoplastic tissues by growth factors including hormones and by the activation and inactivation of oncogenes and tumor suppressor genes respectively It also offers a survey of the molecular and cell biochemistry of retinoids Basic researchers in biochemistry pharmacology and cell biology as well as clinicians will find this book very informative and up to date This book advances the knowledge of mechanisms regulating metabolism and functioning of vitamin A and offers the most recent results of research on clinical efficiency of retinoids in skin disorders and cancer Basic researchers in biochemistry pharmacology cell biology and clinicians will find this book very informative and up to date The chapters organized in six sections are contributed by leading scientists who have been working in the retinoid field for decades Their experience and competence is acknowledged worldwide

Veterinary and Human Toxicology ,1995 *Retinoids* Heinz Nau,William S. Blaner,2012-12-06 In the future the decade of the 1990s will likely be viewed as a Golden Age for retinoid research There have been unprecedented research gains in the understanding of retinoid actions and physiology since the retinoid nuclear receptors were first identified and the importance of retinoic acid in developmental processes was first broadly recognized in the late 1980s Between then and now our knowledge of retinoid action has evolved from one of a near complete lack of understanding of how retinoids act within cells to one of sophisticated understanding of the molecular processes through which retinoids modulate transcription In this volume we have tried to provide a comprehensive update of the present understanding of retinoid actions with an emphasis on recent advances The initial chapters of the volume or Section A focus on the physicochemical properties and metabolism of naturally occurring retinoids N OY provides an uncommonly encountered view of retinoid effects from the perspective of the physicochemical properties of retinoids V AKIANI and BUCK lend a perspective on the biological occurrence and actions of retro and anhydro retinoids Section B considers both the retinoid nuclear receptors and their

mechanisms of action as well as synthetic retinoids that have been used experimentally to provide mechanistic insights into receptor actions and have potential therapeutic use for treating disease PIEDRAFITA and PFAHL provide a comprehensive review of retinoid nuclear receptor biochemistry and molecular biology *Retinoids: New Trends in Research and Therapy* J. -H. Cunliffe, A.J. Miller, 2012-12-06 The impact of the retinoids in clinical practice has primarily been in dermatology When Dr Werner Bollag began his basic research and screening programme in the early 1960 s the expectation was that the retinoids would have a major impact on oncology However the laboratory and clinical experiences of Bollag and his colleagues in Switzerland Stuttgart and Orfanos in Germany led to publications on both etretinate Tigason and isotretinoin Roaccutane in the years between 1972 and 1976 in the field of dermatology In fact the first symposium on retinoid research held in Berlin in 1981 was almost entirely dermatological A year later a retinoid workshop in Iowa was designed to provide a forum for dermatologists from the USA involved in specific protocols investigating oral retinoids In the UK research into the retinoids began rather later than in Continental Europe or in the USA although Tigason was first marketed here It was felt in late 1982 that as many dermatologists had relatively little experience with these compounds it would be appropriate to hold an International Symposium on retinoid therapy in the UK Thus on 16-18 May 1983 in London 37 speakers from 11 countries addressed an audience of 300 mainly UK dermatologists The scientific organizing committee consisted of but two persons Dr William Cunliffe of Leeds General Infirmary representing the European Society of Dermatological Research and myself from
