Ryanoidine Receptors Structure Function And Dysfunction In Clinical Disease:

Ryanodine Receptors Xander H. T. Wehrens, Andrew R. Marks, 2004-11-09 In recent years the ryanodine receptor has emerged as a new and very promising target for the treatment of several cardiovascular disorders including cardiac arrhythmias and heart failure This volume is the most current publication devoted to the major intracellular calcium release channel the ryanodine receptor In this series of brief but informative chapters the contributions progress from the basic gene family and primary structure through its 3D structure so far to its regulation and physiology David E Clapham MD PhD Professor of Neurobiology and Pediatrics Harvard Medical School Dr Xander H T Wehrens received his M D and Ph D degrees from Maastricht University in the Netherlands His research has mainly concentrated on molecular mechanisms of cardiac arrhythmias in particular in the setting of inherited arrhythmogenic syndromes and congestive heart failure This work has led to the development of novel anti arrhythmic therapies He is currently a research scientist in the Department of Physiology and Cellular Biophysics at the College of Physicians and Surgeons of Columbia University Dr Andrew R Marks is the Chair and Professor of the Department of Physiology and Cellular Biophysics at Columbia University College of Physicians and Surgeons Dr Marks research has focused on understanding how macromolecular signaling complexes regulate ion channel function in muscle and non muscle systems and on the regulation of vascular smooth muscle proliferation and migration His work has contributed new understandings of fundamental mechanisms that regulate muscle contraction that have lead to the discovery of molecular defects that contribute to heart failure and fatal cardiac arrhythmias

Structure and Function of Calcium Release Channels Irina Serysheva, 2010-09-22 This volume of Current Topics in Membranes focuses on Membrane Protein Crystallization beginning with a review of past successes and general trends then further discussing challenges of membranes protein crystallization cell free production of membrane proteins and novel lipids for membrane protein crystallization This publication also includes tools to enhance membrane protein crystallization technique advancements and crystallization strategies used for photosystem I and its complexes establishing Membrane Protein Crystallization as a needed practical reference for researchers **Calcium Signaling** James W. Putney Jr., 2005-11-21 The first edition of James Putney's Calcium Signaling offered readers a comprehensive view of the fascinating diversity of technologies that the new field of calcium signaling employed And while that work is still regarded as a premier text on the basics of calcium signaling progress has been so dramatic that an update is now required In Cal

of mammalian tissues relates biochemical events at a cellular level to the subsequent physiological processes in the whole animal and cites examples of abnormal biochemical processes in human disease The organization and content are tied together to provide students with the complete picture of biochemistry and how it relates to human diseases

Klussmann, John Scott, 2008-05-20 Disease relevant intracellular protein protein interactions occurring at defined cellular sites possess great potential as drug targets They permit highly specific pharmacological interference with defined cellular functions Drugs targeting such interactions are likely to act with fewer side effects than conventional medication influencing whole cell functions This book discusses therapeutically relevant protein protein interactions with a major focus on scaffolding proteins tethering signal transduction processes to defined cellular compartments by direct protein protein interactions Recent advances in the development of pharmacological agents interfering with protein protein interactions are highlighted Antioxidants and Cardiovascular Disease Martial G. oxidative stress is associated with the aging process and often leads to the development of disorders such as cancer and arterial disease Cardiovascular conditions in which oxidation damage has been strongly implicated include atherosclerosis myocardial ischemia and reperfusion coronary restenosis diabetes mellitus and congestive heart failure Antioxidants and Cardiovascular Disease Second Edition covers three major topics 1 the first seven chapters review the oxidative modification hypothesis and its close relationship to lipid metabolism and to the pathogenesis of atherosclerosis 2 the next four chapters describe the different compounds nutrients and supplements with antioxidant properties and their mechanisms of action 3 and finally the last ten chapters discuss the potential benefits of antioxidants in overall cardiovascular prevention including hypertension diabetes mellitus dyslipidemias and in the treatment and prevention of specific conditions such as chronic coronary artery disease restenosis after percutaneous coronary intervention and chronic heart failure Antioxidants and Cardiovascular Disease Second Edition is written by recognized experts in the fields of atherosclerosis heart failure and antioxidants It should be of interest to medical students and fellows researchers and practicing physicians There has been rapid progress in our knowledge in this field during the last two to three years Thus the current reedition appears timely For instance this second edition captures several recently reported and published clinical trials as well as new information on diabetic and hypertensive cardiovascular disease Mitochondria and the Heart José Marín-García, 2005-05-05

Mitochondria have been pivotal in the development of some of the most important ideas in modern biology Since the discovery that the organelle has its own DNA and specific mutations were found in association with neuromuscular and cardiovascular diseases and with aging an extraordinary number of publications have followed and the term mitochondrial medicine was coined Furthermore our understanding of the multiple roles that mitochondria play in cardiac cell homeostasis opened the door for intensive experimentation to understand the pathogenesis and to find new treatments for cardiovascular diseases Besides its role in adenosine triphosphate generation mitochondria regulate a complex network of cellular interactions involving 1 generation and detoxification of reactive oxygen species including superoxide anion hydrogen

peroxide and hydroxyl radical 2 maintenance of the antioxidant glutathione in a reduced state and adequate level of mitochondrial matrix superoxide dismutase 3 cytoplasmic calcium homeostasis particularly under conditions of cellular calcium loading 4 transport of metabolites between cytoplasm and matrix 5 both programmed apoptosis and necrotic cell death and 6 cell growth and development It is therefore not surprising that this organelle has come to be the center stage in many current investigations of cardiovascular diseases aging and age related disease Concomitant with these advances an impressive effort is under way for the development of new tools and methodologies to study mitochondrial structure and function including powerful ways to visualize monitor and alter the organelle function to assess the genetic consequences of these perturbations
