

The background of the slide is a collage. On the left, there's a molecular model of a benzene ring with a dashed circle inside, and an isocyanide group (a blue nitrogen atom bonded to a black carbon atom, which is further bonded to a white hydrogen atom). On the right, there's a glowing lightbulb. Below the lightbulb, there's a molecular model of a complex organic structure with a blue nitrogen atom. In the center, there's a black rectangular box with yellow text. The overall theme is chemistry, specifically focusing on S-centered radicals and isocyanides.

Free-Radical-Induced DNA Damage and Its Repair Clemens Sonntag, 2006-03-20 The free radical chemistry of DNA had been discussed in some detail in 1987 in my book The Chemical Basis of Radiation Biology Obviously the more recent developments and the concomitant higher level of understanding of mechanistic details are missing Moreover in the living cell free radical DNA damage is not only induced by ionizing radiation but free radical induced DNA damage is a much more general phenomenon It was therefore felt that it is now timely to review our present knowledge of free radical induced DNA damage induced by all conceivable free radical generating sources Originally it had been thought to include also a very important aspect the repair of DNA damage by the cell s various repair enzymes Kevin Prise Cancer Campaign Gray Laboratory London was so kind to agree to write this part However an adequate description of this strongly expanding area would have exceeded the allocated space by much and this section had to be omitted The directors of the Max Planck Institut für Strahlenchemie now MPI für Bioanorganische Chemie Karl Wieghardt and Wolfgang Lubitz kindly allowed me to continue to use its facilities after my retirement in 2001 Notably our librarian Mrs Jutta Theurich and her right hand help Mrs Rosemarie Schreier were most helpful in getting hold of the literature I thank them very much Without their constant help this would have been very difficult indeed
